Main ISO 19450-compliant OPM symbols.....xxi

PART I Model-Based Systems Engineering Introduced

Chapter 1 Ready to Start Modeling?3

1.1 The Automatic Crash Response System3

1.2 The Function-as-a-Seed OPM Principle4

1.3 Identifying the System’s Function5

1.4 Identifying the System’s Beneficiary6

1.5 A Process Transforms an Object.....6

1.6 Summary7

1.7 Problems.....8

Chapter 2 Text and Simulation Enhancements11

2.1 OPL: A Subset of English11

2.2 States and Animated Simulation12

2.3 Animated Execution of the OPM Model15

2.4 Summary16

2.5 Problems.....16

Chapter 3 Connecting Things with Links19

3.1 Procedural Links vs. Structural Links19

3.2 Adding Enablers.....19

3.3 Adding Structural Links22

3.4 Physical vs. Informatical Things.....23

3.5 Model Facts and OPL Paragraphs24

3.6 Environmental vs. Systemic Things.....24

3.7 Initial and Final States.....25

3.8 Triggering State and Event Link27

3.9 Summary27

3.10 Problems.....28

Chapter 4 SysML: Use Case, Block, and State Machine Diagrams29

4.1 The SysML Use Case Diagram.....29

4.2 SysML Blocks and the Block Definition Diagram32

4.3 SysML State Machine Diagram33

4.4 Summary35

4.5 Problems.....35

<i>Chapter 5 Refinement Through In-Zooming</i>	37
5.1 Measuring Crash Severity	37
5.2 In-Zooming: Refining a Process in a New OPD	38
5.3 The OPD Tree	38
5.4 The Model Fact Representation OPM Principle	39
5.5 The Crash Severity Attribute and Its Measurement	40
5.6 Simulating the System: an Animated Execution Test	41
5.7 Summary	42
5.8 Problems	43
<i>Chapter 6 The Dynamic Aspect of Systems</i>	45
6.1 Exiting in Case of Light Severity	45
6.2 Message Creating and Sending	45
6.3 Process Execution Order: The Timeline OPM Principle	47
6.4 Help Is on the Way!	48
6.5 Scenarios: Threads of Execution	49
6.6 Summary	50
6.7 Problems	51
<i>Chapter 7 Controlling the System's Behavior</i>	53
7.1 Branching with Boolean objects	53
7.2 Condition Link vs. Instrument Link	55
7.3 Generalization-Specialization	56
7.4 Zooming into Crash Severity Measuring	57
7.5 Participation Constraints	58
7.6 Logical Operators: OR vs. XOR	58
7.7 Crash Severity Measuring Refined	58
7.8 Scope of Things: Signal as a Temporary Object	59
7.9 How is Diagnosing Done?	60
7.10 Summary	60
7.11 Problems	61
<i>Chapter 8 Abstracting and Refining</i>	63
8.1 In-Zooming: Refining a Process in a New OPD	63
8.2 Message Handling In-Zoomed	65
8.3 Structural View of the ACR System	67
8.4 Summary	68
8.5 Problems	69
 <i>PART II Foundations of OPM and SysML</i>	
<i>Chapter 9 Conceptual Modeling: Purpose and Context</i>	75
9.1 Systems, Modeling, and Systems Engineering	75
9.2 A Foundational Systems Engineering OPM Ontology	76
9.3 Object, State, Transformation, and Process Defined	82

9.4 System and Related Concepts	83
9.5 Language and Modeling.....	91
9.6 Summary	94
9.7 Problems.....	95
<i>Chapter 10 Things: Objects and Processes</i>	<i>97</i>
10.1 The Object-Oriented vs. The Object-Process Approach.....	97
10.2 Existence, Things, and Transformations.....	98
10.3 Object Identity	99
10.4 Syntax vs. Semantics.....	102
10.5 The Procedural Link Uniqueness OPM Principle.....	106
10.6 The Process Test.....	109
10.7 Naming OPM Elements	111
10.8 Thing Defined.....	113
10.9 Properties of OPM Things.....	114
10.10 Boundary Cases of Things	116
10.11 Operator, Operand, and Transform	119
10.12 Summary	120
10.13 Problems.....	121
<i>Chapter 11 Object-Process Language: The Text.....</i>	<i>123</i>
11.1 OPL: The Textual Modality	123
11.2 The Dual Purpose of OPL	124
11.3 The Graphics-Text Equivalence OPM Principle.....	125
11.4 Metamodel of OPM Model Structure	125
11.5 Reserved and Non-Reserved OPL Phrases	127
11.6 Motivation for OPM's Bimodal Expression	129
11.7 Tesperanto: A Human Readable Auto-generated Text	131
11.8 Summary	132
11.9 Problems.....	133
<i>Chapter 12 SysML: Foundations and Diagrams</i>	<i>135</i>
12.1 UML: Unified Modeling Language	135
12.2 SysML Pillars.....	136
12.3 Requirements Diagram.....	136
12.4 Blocks and Structure	137
12.5 Activity Diagram.....	138
12.6 Sequence Diagram.....	141
12.7 Requirements Diagram.....	143
12.8 Parametric Diagram and Constraint Property Blocks	146
12.9 SysML–OPM Comparison	148
12.10 SysML–OPM Synergies.....	155
12.11 Summary	155
12.12 Problems.....	156

<i>Chapter 13 The Dynamic System Aspect</i>	157
13.1 Change and Effect	157
13.2 Existence and Transformation	158
13.3 Procedural Links	162
13.4 Transforming Links	163
13.5 Enablers	165
13.6 The Preprocess and Postprocess Object Sets	169
13.7 State-Specified Procedural Links	170
13.8 State-Specified Enabling Links	171
13.9 State-Specified Transforming Links	173
13.10 State-Specified Effect Links	175
13.11 Summary	179
13.12 Problems	181
<i>Chapter 14 The Structural System Aspect</i>	183
14.1 Structural Relations	183
14.2 Reciprocity and Transitivity of Structural Relations	188
14.3 Structural Relations as State-Preserving Processes	194
14.4 Summary	194
14.5 Problems	195
<i>Chapter 15 Participation Constraints and Forks</i>	197
15.1 Structural and Procedural Participation Constraints	197
15.2 Structural Participation Constraints	198
15.3 Shorthand Notations and Reserved Phrases	200
15.4 Cardinality	201
15.5 Procedural Participation Constraints	203
15.6 The Distributive Law of Structural Relations	205
15.7 Fork, Handle, and Tine	207
15.8 The Tine Thing Set	209
15.9 Summary	213
15.10 Problems	214
<i>Chapter 16 Fundamental Structural Relations</i>	215
16.1 Relation Symbols and Participants	215
16.2 Relation Names and OPL Sentences	216
16.3 Structural Hierarchies, Transitivity, User-Defined Symbols	217
16.4 Summary	218
16.5 Problems	218
 <i>PART III Structure and Behavior: Diving In</i>	
<i>Chapter 17 Aggregation-Participation</i>	221
17.1 Underlying Concepts	221
17.2 Aggregation-Participation as a Fork	223

17.3 A Semantic Web Example	224
17.4 Aggregate Naming	226
17.5 Composite and Shared Aggregation in UML and SysML	227
17.6 Expressing Parts Order	229
17.7 Aggregation and Tagged Structural Relations	230
17.8 Non-Comprehensive Aggregation	232
17.9 The Parameterized Participation Constraints Mini-Language	235
17.10 Summary	236
17.11 Problems	237
<i>Chapter 18 Exhibition-Characterization</i>	<i>239</i>
18.1 Feature and Exhibitor	239
18.2 Attribute and Operation: The Two Kinds of Feature	241
18.3 Features in UML and SysML vs. OPM	242
18.4 OPM Thing and Feature Name Uniqueness	243
18.5 The Four Thing-Feature Combinations	244
18.6 Fundamental Structural Hierarchies	248
18.7 The Attribute Naming Problem	249
18.8 Properties of Features and Links	251
18.9 Summary	254
18.10 Problems	255
<i>Chapter 19 States and Values</i>	<i>257</i>
19.1 State Defined	257
19.2 State Suppression and Expression	259
19.3 Value: A Specialization of State	260
19.4 State Transition: When a Process Is Active	261
19.5 Path Labels and Flip-Flop	264
19.6 A Model of the Brain's "Self-Organized Criticality"	266
19.7 State-Specified Tagged Structural Links	268
19.8 Compound States and State Space	271
19.9 Summary	274
19.10 Problems	274
<i>Chapter 20 Generalization and Instantiation</i>	<i>277</i>
20.1 Generalization-Specialization: Introduction	277
20.2 Inheritance	280
20.3 Specialization Through a Discriminating Attribute	283
20.4 State-Specified Characterization Link	285
20.5 Classification-Instantiation	286
20.6 The Relativity of Instance	288
20.7 Constraining Attribute Values	289

20.8 Process Instances	290
20.9 Summary	292
20.10 Problems	292
<i>Chapter 21 Complexity Management: Refinement and Abstraction</i>	295
21.1 The Need for Complexity Management	295
21.2 The Model Complexity Assertion	296
21.3 Aspect-Based vs. Detail-Level-Based Decomposition	297
21.4 The Completeness-Clarity Trade-off	298
21.5 State Expression and State Suppression	299
21.6 Unfolding and Folding	300
21.7 In-Diagram and New-Diagram Unfolding	301
21.8 Port Folding	302
21.9 In-Zooming and Out-Zooming	302
21.10 Synchronous vs. Asynchronous Process Refinement	305
21.11 The Equivalence between In-Zooming and Unfolding	306
21.12 The System Map and the Ultimate OPD	307
21.13 The OPD Object Tree and Forest	310
21.14 Out-Zooming	311
21.15 Simplifying an OPD	313
21.16 Abstraction Accounts for Procedural Link Precedence	315
21.17 Link Migration upon In-Zooming	318
21.18 View Creating: The Fourth Refinement Mechanism	318
21.19 Middle-Out as the De-facto Architecting Practice	319
21.20 Navigating Within an OPM System Model	320
21.21 Summary	321
21.22 Problems	324
<i>Chapter 22 OPM Operational Semantics and Control Links</i>	327
22.1 The Event-Condition-Action Control Mechanism	327
22.2 Precondition, Preprocess and Postprocess Object Sets	328
22.3 Kinds of Control Links	328
22.4 Event Links	329
22.5 Condition Links	333
22.6 Exception Links	340
22.7 Transformation Rate	342
22.8 Computing with OPM	344
22.9 Sets and Iterations	346
22.10 Operational Semantics in In-Zoomed Process Contexts	346
22.11 Involved Object Set Instance Transformations	353
22.12 UML's Object Constraint Language (OCL)	354
22.13 Summary	355
22.14 Problems	356

<i>Chapter 23 Logical Operators and Probabilities</i>	<i>357</i>
23.1 Logical AND Procedural Links.....	357
23.2 Logical NOT.....	359
23.3 Logical XOR and OR Link Fans.....	360
23.4 Diverging and Converging XOR and OR Links	362
23.5 Combinatorial XOR and Combinatorial OR.....	365
23.6 State-Specified XOR and OR Link Fans	367
23.7 Multiple Control Links Have OR Semantics	368
23.8 Link Probabilities and Probabilistic Link Fans	370
23.9 Summary	373
23.10 Problems	373
<i>Chapter 24 Overview of ISO 19450</i>	<i>375</i>
24.1 The ISO 19450 Introduction	375
24.2 ISO 19450 Terms, Definitions, and Symbol Sections	377
24.3 Object-Process Methodology Principles and Concepts	378
24.4 The Four Annexes of ISO 19450	380
References	387
