

Contents

1	The last Galilean	1
1.1	Elementorum physicae mathematicae	1
1.2	No man's land and the international milieu	3
1.3	Via Panisperna	10
1.4	The Pope, the Divine Providence, and the slow neutrons	15
1.5	The end of a small world	19
1.6	The Nobel prize	23
1.7	Landing in the New World	24
1.8	Power and sin: "Little Boy" and "Fat Man"	29
1.9	Traveling again: from nuclei to elementary particles	37
1.10	The last trip	43
2	20th century physics: 1900–1933	45
2.1	The roots of the relativistic program	46
2.2	Special relativity	49
2.3	A note on global maps	51
2.4	General relativity	52
2.5	The quantum program	57
2.6	From radiation physics to atomic physics	58
2.7	Atomic models and "Old Quantum Theory"	64
2.8	Nuclear protophysics and the proton-electron nuclear model	74
2.8.1	The isotopic conception of matter	75
2.8.2	The scattering of α particles	77
2.8.3	The (p-e) model	78
2.8.4	Quantum statistics	79
2.8.5	Quantum mechanics	83
2.8.6	Quantum mechanics and nuclear protophysics: the anomalies of the (p-e) model	89
2.8.7	New discoveries and first nuclear theories	95
2.9	A note of the dynamics of the global maps: the regulating principles and the birth of nuclear physics	102

3 Enrico Fermi: research itineraries 1921–1933	105
3.1 Systematics of Fermi’s research between 1921 and 1933	105
3.2 Italian physics in the 20s	107
3.3 Fermi’s two itineraries	110
3.4 The beginnings	111
3.5 The “4/3 saga,” Fermi coordinates, and the atomic bomb	111
3.6 Why relativity?	118
3.7 The quantum itinerary	124
3.8 The transition period. From relativity to quanta	125
3.9 Contributions to the “Old Quantum Theory”	130
3.10 Interlude: the second adventure in the experimental arena	133
3.11 A new statistics	135
3.12 Local itineraries and global maps: the path toward the Fermi-Dirac	139
3.13 The acceptance of the quantum paradigm: solid state physics ...	143
4 20th century physics: 1934–1954	157
4.1 Nuclei and particle accelerators	157
4.2 Cosmic ray physics	161
4.3 The “birth song”	162
4.4 Cosmic rays from object of investigation to tools for research ...	165
4.5 Themes and problems of nuclear physics	167
4.6 Artificial radioactivity and neutron physics	168
4.7 Nuclear fission	170
4.8 Guidelines: models and nuclear forces	176
4.9 At the origins of elementary particle physics	183
4.10 Confluence processes: nuclei, cosmic rays, and quantum field theory	183
4.11 A wonderful mess	190
5 Enrico Fermi: research itineraries 1934–1954	197
5.1 Fermi at work: 1934–1954	197
5.2 Neutron physics	199
5.3 Artificial radioactivity: the transuranic elements	200
5.4 Slow neutrons	206
5.5 The end of the Italian years	212
5.6 Nuclear energy and wartime physics. The atomic pile	214
5.7 From CP-1 to the bomb: Eugene Farmer’s deeds	231
5.8 The role of Great Britain: the Maud Committee	236
5.9 The Los Alamos inheritance: toward Big Science	240
5.10 The transition period	242
5.11 The origin of cosmic rays	244
5.12 A trip to the world of elementary particles	247
5.13 Complexity: computers and nonlinear systems	253

Epilogue	259
A Chronologies	263
A.1 Chronology of Fermi's life	263
B Documents	283
B.1 Pauli's neutrino hypothesis	283
B.2 Albert Einstein's letter to Roosevelt and Roosevelt's answer (1939)	285
B.3 War Department release on New Mexico test, July 16, 1945	288
B.4 Fermi and the secrecy problem (1954)	293
B.5 Physics at Columbia University (the genesis of the nuclear energy project)	294
B.6 T. D. Lee. Reminiscence of Chicago days	297
C Background material	301
C.1 Newtonian mechanics; inertial and gravitational mass	301
C.2 Curved space: the strange worlds of Flatland and Spheriland	302
C.3 α particle scattering	303
C.4 Planck's constant and the birth of the wave-particle duality	304
C.5 The electron spin and the exclusion principle	307
C.6 The isotopic constitution of the elements	308
C.7 The uncertainty relations and the complementarity principle	309
C.8 Quantum electrodynamics	310
C.9 Electromagnetic mass and electron dynamics	311
C.10 The adiabatic principle and OQT	312
C.11 The hyperfine structures	313
C.12 Particle accelerators and detection techniques	314
C.12.1 Accelerators	314
C.12.2 Particle detectors	317
C.13 Divergencies in quantum field theory and the renormalization programme	318
D Enrico Fermi's bibliography	321
Author Index	335
Subject Index	343
