Part I Basic Equations and Oscillators

1	Continuous Models	3
	Antoine Chaigne and Jean Kergomard	
1.1	Strings, Membranes, Bars, Plates, and Shells	3
1.1.1	Introduction	3
1.1.2	Membranes and Strings	5
1.1.3	Stress and Strain	9
1.1.4	Constitutive Equations of Materials: Linear Elasticity ...	12
1.1.5	Bars and Plates	16
1.1.6	Equation of Shells	26
1.2	3D Acoustic Waves	32
1.2.1	State Equation of a Gas	33
1.2.2	Momentum Conservation	34
1.2.3	Conservation of Mass	37
1.2.4	Acoustic Wave Equation	37
1.2.5	Simple Solutions: Traveling and Standing Waves	38
1.3	Energy, Intensity, and Power	41
1.3.1	Example of the Vibrating String	41
1.3.2	Example of Linear Acoustic Waves	43
1.3.3	Power and Impedance	43
1.4	Sources in Musical Acoustics: Excitation Mechanisms	45
1.4.1	Generalities About Sources and Types of Oscillations ...	46
1.4.2	Acoustic Sources	47
1.4.3	Transient Mechanical Excitation	50
1.5	Lumped Elements; Helmholtz Resonator	60
1.6	Vibrating Strings-Sound Pipes Analogies	63
1.6.1	Note on the Definition of Impedances for Forced Oscillations	66

1.7	Numerical Methods	67
1.7.1	Finite Difference Methods	67
1.7.2	Finite Element Method	70
	References	73
2	Single-Degree-of-Freedom Oscillator	77
	Antoine Chaigne and Jean Kergomard	
2.1	Introduction	77
2.2	Solution With and Without a Source: Green's Function	79
2.2.1	Solution Without a Source; Eigenfrequency	79
2.2.2	Solution with an Elementary Source: Green's Function ..	81
2.2.3	General Solution with a Source Term	82
2.3	Examples of Free and Forced Oscillations	84
2.3.1	Displacement of a System from Equilibrium	84
2.3.2	Excitation (Forced) by a Steady Sinusoidal Force	84
2.3.3	Excitation by a Sinusoidal Force Starting at $t = 0$	85
2.3.4	Excitation by a Sinusoidal Force Stopping at $t = 0$	86
2.4	Forced Oscillations: Frequency Response	87
2.4.1	Remarks on the Determination of the Resonance Frequency	90
2.5	Energy, Power, and Efficiency	92
2.5.1	Energy and Power	92
2.5.2	Mechanical Air Loaded Oscillator	95
 Part II Waves and Modes		
3	Modes	101
	Antoine Chaigne and Jean Kergomard	
3.1	Introduction	101
3.2	Time Scale: Transition from Wave to Mode	103
3.3	Definitions and Basic Properties of the Eigenmodes	104
3.3.1	Discrete System	104
3.3.2	Extension to Continuous Systems	108
3.4	Application to Vibrating Strings	109
3.4.1	Heterogeneous String	110
3.4.2	Ideal String Fixed at Both Ends	115
3.4.3	Initial Conditions and Starting Transients	116
3.4.4	Plucked String	116
3.4.5	String with a Moving End	121
3.4.6	Influence of Spatial Width and Duration of the Excitation	129
3.4.7	Struck String	132
3.4.8	Driving-Point and Transfer Admittance	132
3.4.9	Strings of Bowed Instruments	139
3.5	Application to Percussion Instruments	143
3.5.1	Vibration of Beams	143
3.5.2	Vibrations of Membranes In Vacuo	152

3.5.3	Transverse Vibrations of Thin Plates	156
3.5.4	Vibrations of Shells	165
	References	170
4	Waves	173
	Antoine Chaigne and Jean Kergomard	
4.1	Introduction	173
4.2	Solutions Without Source, First Reflection	174
4.3	Successive Reflections of Waves Produced by a Pulse Source	176
4.3.1	General Expression	176
4.3.2	Reflections and Modes Periodicity	178
4.3.3	Remark on the Reflection Function (4.3)	179
4.4	One-Dimensional Green's Function	180
4.4.1	Expression of the Green's Function	180
4.4.2	Approximated "Practical" Realization	180
4.5	Solutions Without Source in the Frequency Domain; Transmission Lines	183
4.6	Green's Function in Sinusoidal Regime: the Particular Case of the Input Impedance	186
4.6.1	Closed-Form Solution of the Green's Function	186
4.6.2	Modal Expansion	190
4.6.3	The Particular Case of a Source at the Input: Input Impedance	193
4.6.4	Closed-Form Expression: Back to the Time Domain	194
	References	197
5	Dissipation and Damping	199
	Antoine Chaigne and Jean Kergomard	
5.1	Introduction: Dissipative Phenomena in Musical Acoustics	199
5.2	Generalizing the Concept of Mode	200
5.2.1	Dissipative Discrete System	201
5.2.2	Continuous Systems	207
5.2.3	Continuous Complex Modes	214
5.3	Damping Mechanisms in Solid Materials	218
5.3.1	Introduction	218
5.3.2	String Damping Due to Air Viscosity	219
5.3.3	Thermoelasticity in Orthotropic Plates	220
5.3.4	Viscoelasticity	224
5.3.5	Hysteretic Damping	228
5.4	Damping Mechanisms in Cylindrical Pipes	229
5.4.1	Introduction	229
5.4.2	Viscous Effects	231
5.4.3	Thermal Conduction Effects	234
5.4.4	Radiation Dissipation at the Open End of the Pipe	238
5.5	Transmission Line Equations	239
5.5.1	General Equations and Solutions	239

5.5.2	Numerical Values of Main Constants in Air.....	241
5.5.3	“Wide” Pipes.....	241
5.5.4	“Narrow” Pipes	248
5.6	Modes of a (Reed) Cylindrical Instrument.....	249
5.6.1	Presentation	249
5.6.2	Modes Orthogonality Method (Without Radiation).....	250
5.6.3	Residue Calculus (Taking Radiation into Account).....	252
	References.....	255
6	Coupled Systems	259
	Antoine Chaigne and Jean Kergomard	
6.1	Introduction.....	259
6.2	Structure–Cavity Interaction.....	260
6.2.1	Mechanical Oscillator Coupled to a Pipe.....	260
6.2.2	Soundboard–Cavity Coupling in Stringed Instruments at Low Frequencies	264
6.3	Coupling of Piano Strings	272
6.3.1	General Equations of the Problem	273
6.3.2	Formulation of the Problem in Terms of Forces	277
6.3.3	Eigenvalues of the Strings-Bridge Coupled System	278
6.3.4	Bridge Motion	280
6.4	String–Soundboard Coupling	282
6.4.1	Determination of Mass and Stiffness Matrices.....	283
6.4.2	Mode Crossing.....	285
6.4.3	Musical Consequences of the Coupling	289
6.5	Soundboard–Bridge Coupling in Violins.....	290
