Part I Mathematical Statistics: Basic (Nonasymptotic) Theory

1	Introduction	3
1.1	What is Statistical Inference?	3
1.2	Sampling Schemes	4
1.3	Some Simple Examples of Inference	6
1.4	Notes and References	7
	Exercises	8
	Reference	9
2	Decision Theory	11
2.1	Decision Rules and Risk Functions	11
2.2	Randomized Decision Rules, Admissibility	15
2.3	Notes and References	16
	Exercises	16
	References	17
3	Introduction to General Methods of Estimation	19
3.1	The Maximum Likelihood Estimator	19
3.2	Method of Moments	21
3.3	Bayes Rules and Bayes Estimators	22
3.4	Minimax Decision Rules	30
3.5	Generalized Bayes Rules and the James-Stein Estimator	32
3.6	Notes and References	35
	Exercises	35
	References	37
4	Sufficient Statistics, Exponential Families, and Estimation	39
4.1	Sufficient Statistics and Unbiased Estimation	39
4.2	Exponential Families	47
4.3	The Cramér–Rao Inequality	55
4.4	Notes and References	59
	Exercises	60

A Project for Students.	62
Appendix for Project: The Nonparametric Percentile Bootstrap of Efron	63
References	64
5 Testing Hypotheses	67
5.1 Introduction	67
5.2 Simple Hypotheses and the Neyman–Pearson Lemma	69
5.3 Examples	70
5.4 The Generalized N–P Lemma and UMP Unbiased Tests	74
5.5 UMP Unbiased Tests in the Presence of Nuisance Parameters	79
5.5.1 UMPU Tests in k -Parameter Exponential Families	81
5.6 Basu’s Theorem	84
5.7 Duality Between Tests and Confidence Regions	88
5.8 Invariant Tests, the Two-Sample Problem and Rank Tests	92
5.8.1 The Two-Sample Problem	94
5.9 Linear Models	97
5.9.1 The Gauss-Markov Theorem	97
5.9.2 Testing in Linear Models	99
5.10 Notes and References	109
Exercises	110
References	112
Part II Mathematical Statistics: Large Sample Theory	
6 Consistency and Asymptotic Distributions of Statistics	117
6.1 Introduction	117
6.2 Almost Sure Convergence, Convergence in Probability and Consistency of Estimators	117
6.3 Consistency of Sample Moments and Regression Coefficients	119
6.4 Consistency of Sample Quantiles	126
6.5 Convergence in Distribution or in Law (or Weak Convergence): The Central Limit Theorem	128
6.6 Asymptotics of Linear Regression	134
6.7 Asymptotic Distribution of Sample Quantiles, Order Statistics	143
6.8 Asymptotics of Semiparametric Multiple Regression	146
6.9 Asymptotic Relative Efficiency (ARE) of Estimators	151
6.10 Constructing (Nonparametric) Confidence Intervals	153
6.11 Errors in Variables Models	154
6.12 Notes and References	157
Exercises	158
References	164
7 Large Sample Theory of Estimation in Parametric Models	165
7.1 Introduction	165
7.2 The Cramér-Rao Bound	166
7.3 Maximum Likelihood: The One Parameter Case	168
7.4 The Multi-Parameter Case	174
7.5 Method of Moments	185
7.6 Asymptotic Efficiency of Bayes Estimators	189
7.7 Asymptotic Normality of M -estimators	191

7.8	Asymptotic Efficiency and Super Efficiency	194
	Exercises	196
	References	200
8	Tests in Parametric and Nonparametric Models	203
8.1	Pitman ARE (Asymptotic Relative Efficiency)	203
8.2	CLT for U -Statistics and Some Two-Sample Rank Tests	208
8.3	Asymptotic Distribution Theory of Parametric Large Sample Tests	215
8.4	Tests for Goodness-of-Fit	222
8.5	Nonparametric Inference for the Two-Sample Problem	228
8.6	Large Sample Theory for Stochastic Processes	233
8.7	Notes and References	250
	Exercises	251
	References	255
9	The Nonparametric Bootstrap	257
9.1	What is “Bootstrap”? Why Use it?	257
9.2	When Does Bootstrap Work?	259
9.2.1	Linear Statistics, or Sample Means	259
9.2.2	Smooth Functions of Sample Averages	260
9.2.3	Linear Regression	261
9.3	Notes and References	264
	Exercises	264
	References	265
10	Nonparametric Curve Estimation	267
10.1	Nonparametric Density Estimation	267
10.2	Nonparametric Regression-Kernel Estimation	272
10.3	Notes and References	276
	Exercises	276
	References	277
Part III Special Topics		
11	Edgeworth Expansions and the Bootstrap	281
11.1	Cramér Type Expansion for the Multivariate CLT	281
11.2	The Formal Edgeworth Expansion and Its Validity	282
11.3	Bootstrap and Edgeworth Expansion	289
11.4	Miscellaneous Applications	293
11.4.1	Cornish-Fisher Expansions	293
11.4.2	Higher Order Efficiency	294
11.4.3	Computation of Power in Parametric Models	294
11.4.4	Convergence of Markov Processes to Diffusions	294
11.4.5	Asymptotic Expansions in Analytic Number Theory	294
11.4.6	Asymptotic Expansions for Time Series	295
11.5	Notes and References	295
	Exercises	299
	References	299

12	Fréchet Means and Nonparametric Inference on Non-Euclidean Geometric Spaces	303
12.1	Introduction	303
12.2	Fréchet Means on Metric Spaces	304
12.3	Data Examples	311
12.4	Notes and References	313
	Exercises	313
	References	314
13	Multiple Testing and the False Discovery Rate	317
13.1	Introduction	317
13.2	False Discovery Rate	318
13.3	An Application to a Diffusion Tensor Imaging Data Set	321
13.4	Notes and References	321
	Exercises	322
	References	322
14	Markov Chain Monte Carlo (MCMC) Simulation and Bayes Theory	325
14.1	Metropolis–Hastings Algorithm	325
14.2	Gibbs Sampler	327
14.3	Bayes Estimation in the Challenger Disaster Problem: A Project for Students	329
	A Project for Students.	330
14.4	Notes and References	331
	Exercises	331
	References	331
15	Miscellaneous Topics	333
15.1	Classification/Machine Learning	333
15.2	Principal Component Analysis (PCA)	335
15.3	Sequential Probability Ratio Test (SPRT)	337
15.4	Notes and References	340
	Exercises	340
	References	341
	Appendices	343
	Standard Distributions	343
A.1	Standard Univariate Discrete Distributions	343
A.2	Some Absolutely Continuous Distributions	345
A.2.1	The Normal Distribution $\mathbf{N}(\mu, \sigma^2)$	347
A.3	The Multivariate Normal Distribution	352
	Exercises	356
	Moment Generating Functions (M.G.F.)	357

Computation of Power of Some Optimal Tests: Non-central t, χ^2 and F	363
Liapounov's, Lindeberg's and Polya's Theorems	369
Solutions of Selected Exercises in Part I	371
Index	385

A Course in Mathematical Statistics and Large Sample
Theory

Bhattacharya, R.; Lin, L.; Patrangenaru, V.

2016, XI, 389 p. 9 illus., 2 illus. in color., Hardcover
