

Contents

- 1 Introduction** 1
 - 1.1 From Databases to Data Streams 1
 - 1.2 Data Stream Management Systems—An Overview 5
 - 1.3 Data Stream Mining and Knowledge Discovery—An Overview. 8
 - References. 12
- 2 Spatio-Temporal Continuous Queries** 17
 - 2.1 Foundation of Continuous Query Processing 17
 - 2.1.1 Running Example 20
 - 2.2 Stream Windows 24
 - 2.2.1 Time-Based Window. 25
 - 2.2.2 Tuple-Based Window 27
 - 2.2.3 Predicate-Based Window. 28
 - 2.3 OCEANUS—A Prototype of Spatio-Temporal DSMS 29
 - 2.3.1 The Type System 32
 - 2.4 Operators 34
 - 2.4.1 Lifting Operations to Spatio-Temporal Streaming Data Types 34
 - 2.5 Implementation. 36
 - 2.5.1 User-Defined Aggregate Functions 37
 - 2.5.2 SQL-Like Language Embedding: CSQL. 40
 - References. 43
- 3 Spatio-Temporal Data Streams and Big Data Paradigm** 47
 - 3.1 Background 47
 - 3.2 MobyDick—A Prototype of Distributed Framework for Big Mobility Data Processing and Analytics. 50
 - 3.2.1 Data Model. 50
 - 3.2.2 Apache Flink. 56

3.2.3	Spatio-Temporal Queries.	58
3.3	Related Work	61
3.3.1	Distributed Spatial and Spatio-Temporal Batch Systems.	62
3.3.2	Centralized DSMS-Based Systems	63
3.3.3	Distributed DSMS-Based Systems	64
3.4	Final Remarks	65
	References.	66
4	Spatio-Temporal Data Stream Clustering	71
4.1	Introduction	71
4.1.1	Spatio-Temporal Clustering.	72
4.2	Data Stream Clustering.	76
4.3	Trajectory Stream Clustering	78
4.3.1	Incremental Trajectory Clustering Using Micro- and Macro-Clustering	78
4.3.2	CTraStream.	84
4.3.3	Spatial Quincunx Lattices Based Clustering	93
4.4	Bibliographic Notes	99
	References.	100
	Index	105

Spatio-Temporal Data Streams

Galic, Z.

2016, XIV, 107 p. 28 illus., Softcover

ISBN: 978-1-4939-6573-1
