Part I A Brief Review of Classical and Quantum Mechanics

1	Canonical Quantization of Physical Systems	3
1.1	Overview	3
1.2	Formalization of Quantum Mechanics: Why?	3
1.3	Lagrangian and Hamiltonian Formulation of Classical Mechanics	4
1.3.1	Hamilton's Principle	4
1.3.2	A Primer on Variational Calculus	5
1.3.3	Euler–Lagrange Equations	6
1.3.4	Hamiltonian and Hamilton's Equations	7
1.3.5	Poisson Brackets	7
1.4	Formal Structure of Quantum Mechanics	8
1.4.1	Hilbert Spaces	8
1.4.2	Operators on Hilbert Spaces	10
1.4.3	Canonical Quantization	12
1.4.4	The Copenhagen Interpretation	14
1.4.5	The “Copenhagen Controversy”	16
	Problems	17
	References	19
2	The Periodic Table, Molecules, and Bonds	21
2.1	Atoms: Building up the Periodic Table	21
2.1.1	Free Particles in Three Dimensions	21
2.1.2	Particles in a Three-Dimensional Box	23
2.1.3	The Hydrogen Atom	24
2.1.4	Periodic Table	30
2.2	Molecules and Bonds	32
	Problems	36
	References	36

Part II Crystals and Electronic Properties of Solids

3	Crystals: Lattice, Reciprocal Lattice, and Symmetry	39
3.1	Overview	39
3.2	Crystals	40
3.2.1	Lattice	40

3.2.2	Reciprocal Lattice	41
3.2.3	Bloch's Theorem.....	42
3.2.4	Bragg Reflections.....	42
3.2.5	The Zincblende and Diamond Crystal	43
3.3	*Group Theory	45
3.3.1	Symmetry and Groups.....	45
3.3.2	Character Tables	48
3.3.3	Degeneracies and Selection Rules	50
3.3.4	Application of Group Theory to Graphene	51
	Problems	54
	References.....	55
4	The Electronic Structure of Crystals: Theoretical Framework	57
4.1	Overview.....	57
4.2	The Hamiltonian of a Crystal	58
4.2.1	The Adiabatic Approximation	59
4.2.2	The Ionic Hamiltonian (Phonons)	60
4.2.3	The One-Electron Approximation: Hartree and Hartree–Fock	61
4.3	Energy Bands: A Bird's Eye View	63
4.3.1	Coupling Atoms	64
4.3.2	Energy Bands	65
4.3.3	Metals, Insulators, Semiconductors.....	66
4.3.4	The Kronig–Penney Model	67
	Problems	68
	References.....	69
5	The Electronic Structure of Crystals: Computational Methods	71
5.1	Overview.....	71
5.2	Plane Waves	71
5.2.1	Orthogonalized Plane Waves.....	74
5.3	The Concept of Pseudopotential	74
5.3.1	From OPWs to Pseudopotentials	75
5.3.2	Model Potentials	76
5.3.3	Density Functional Theory	77
5.3.4	Empirical Pseudopotentials (EP).....	78
5.4	Other Approximate Methods	80
5.4.1	Tight-Binding	80
5.4.2	$\mathbf{k} \cdot \mathbf{p}$ Method and Effective Mass	83
5.5	A Computational Example.....	85
5.6	Qualitative Features of the Band Structure of Semiconductors	89
5.6.1	The Valence Bands in the Nearly-Free-Electron Model	89
5.6.2	The Origin of the Energy Gaps	91
5.6.3	The Spin–Orbit Interaction.....	92
5.6.4	The $\mathbf{k} \cdot \mathbf{p}$ Structure of the Bands of fcc Semiconductors Near Band-Extrema.....	95
	Problems	97
	References.....	97
6	Density Functional Theory	99
6.1	Overview.....	99
6.2	Theoretical Basis for DFT	99

6.3	* Relevance of DFT Calculations for Electronic Transport	102
6.3.1	Performing a DFT Calculation	102
6.3.2	Determining the Lattice Constant and Crystal Structure	104
6.3.3	Calculating the Band Structure	106
6.3.4	Calculating the Workfunction and Band Offsets	107
6.3.5	Calculating the Phonon Spectrum	108
	Problems	109
	References	110
7	* Electronic Structure of Low-Dimensionality Systems	111
7.1	The Supercell Concept for Nanostructures	112
7.2	Thin Layers (Thin Films and 2DEG, Graphene)	114
7.2.1	Thin Si Layers	114
7.2.2	III–V Hetero-Channels	120
7.2.3	Graphene	127
7.3	Nanowires, Nanotubes, and Nanoribbons	133
7.3.1	Si Nanowires	134
7.3.2	Graphene Nanoribbons	141
7.3.3	Carbon Nanotubes	153
	References	159
8	Single-Electron Dynamics in Crystals	163
8.1	Equations of Motion for Electrons in Crystals	163
8.1.1	The Envelope Approximation	163
8.1.2	Effective Mass	167
8.1.3	Group Velocity and Acceleration Theorems	168
8.2	Some Important Applications	171
8.2.1	The Two-Dimensional Electron Gas	171
8.2.2	Zener–Bloch Oscillations and the Stark Ladder	177
8.2.3	Landau Levels	177
8.2.4	Plasma Oscillations	181
8.2.5	Shallow-Impurity States	182
	Problems	183
	References	183

Part III Elementary Excitations, Statistical Mechanics, and Dielectric Response

9	Elementary Excitations in Solids	187
9.1	Lagrangian and Hamiltonian Formulation for Fields	187
9.1.1	Classical Lagrangian Density	188
9.1.2	Conjugate Momenta and Classical Hamiltonian Density	189
9.1.3	Hamilton’s Equations	190
9.1.4	Canonical Quantization of Fields	190
9.2	Quantization of the Schrödinger Field: Electrons	191
9.2.1	The Lagrangian and Hamiltonian Densities	191
9.2.2	Canonical Quantization and Commutation Rules	192
9.2.3	The Hamiltonian as a Collection of Harmonic Oscillators	193
9.2.4	Anticommutation Rules	195
9.2.5	Fock Space for Fermions	196

9.3	Quantization of the Charge Density: Plasmons	198
9.3.1	Lagrangian Density	199
9.3.2	Going to Fourier Transforms	199
9.3.3	The Hamiltonian	200
9.3.4	Canonical Quantization	200
9.3.5	Fock Space for Bosons	202
9.3.6	A Calculation: Thermal Expectation Value of the Plasmon Field	202
9.3.7	A Semiclassical Analogy	203
9.4	Quantization of the Vibrational Degrees of Freedom: Phonons	203
9.4.1	Canonical Quantization	203
9.4.2	A Simple Example: A Linear Chain	205
9.4.3	Types of Phonons	207
9.5	Quantization of the Electromagnetic Fields: Photons	208
9.5.1	Maxwell's Equations	209
9.5.2	Lagrangian Density	209
9.5.3	Hamiltonian Density	210
9.5.4	Equations of Motion	211
9.5.5	The Quantum Field and the Importance of Second Quantization	212
	Problems	213
	References	214
10	Elements of Quantum Statistical Mechanics	215
10.1	Quantum Statistical Mechanics	215
10.1.1	Statistical Ensembles	216
10.1.2	Density Matrix	216
10.1.3	Examples of Density Matrices	217
10.1.4	The Grand Canonical Ensemble	218
10.1.5	Distribution Functions	219
10.1.6	Equation of Motion for the Density Matrix	221
	References	221
11	Dielectric Properties of Semiconductors	223
11.1	Outline	223
11.2	Ionic Response	224
11.2.1	Optical Phonons in a Linear Chain	224
11.2.2	Response in the Infrared	225
11.3	Electronic Response	226
11.3.1	Random Phase Approximation	227
11.3.2	Special Limits (Long-Wavelength, Static, Response of 2DEGs and 1DEGs)	231
	Problems	250
	References	250
Part IV Electron Scattering in Solids		
12	Generalities About Scattering in Semiconductors	255
12.1	Scattering Theory	255
12.2	Scattering in Three Dimensions	256
12.2.1	Scattering Rates	256
12.2.2	*Numerical Evaluation	259

12.3	Scattering in Two Dimensions	259
12.3.1	Scattering Rates	259
12.3.2	*Numerical Evaluation	265
12.4	Scattering in One Dimension	266
12.4.1	Scattering Rates	266
12.4.2	*Numerical Evaluation	268
	Problems	268
	References	268
13	Electron–Phonon Interactions	269
13.1	General Formalism and the Rigid-Ion Approximation	270
13.1.1	General Formalism	270
13.1.2	The Rigid-Ion Approximation	272
13.2	Deformation Potentials and the Harrison Interaction	278
13.2.1	Deformation Potentials From First Principles in Bulk Si	280
13.3	The Fröhlich Interaction	282
13.4	Electron–Phonon Interaction for a 2DEG	286
13.4.1	Electron Transport in Si Inversion Layers: Monte Carlo Results	287
13.4.2	Electron–Phonon Interaction in Graphene	290
13.4.3	Scattering Rates in the Effective-Mass Approximation	300
13.5	Electron–Phonon Interaction for a 1DEG	302
13.5.1	Deformation Potentials and Electron Mobility in Silicane NRs and AGNRs	303
13.5.2	Scattering Rates in the Effective-Mass Approximation	305
13.6	Dielectric Screening and Coupled Plasmon/LO-Phonon Modes	309
	Problems	312
	References	313
14	Scattering with Ionized Impurities	315
14.1	Overview	315
14.2	Electron–Impurity Hamiltonian	315
14.3	Electron–Impurity Scattering Rates	317
14.4	The Brooks–Herring Model	318
14.5	The Conwell–Weisskopf Model	319
14.6	Ridley’s Statistical Screening Model	320
14.7	*Additional Corrections to the Impurity Potential	320
14.8	*Electron–Impurity Scattering for a 2DEG	322
14.9	*Electron–Impurity Scattering for a 1DEG	323
	Problems	324
	References	325
15	Coulomb Interactions Among Free Carriers	327
15.1	The Electron–Electron Hamiltonian	327
15.2	Single-Particle Short-Range Collisions	330
15.2.1	*Numerical Evaluation and Scattering in Low-Dimensionality Systems	332
15.2.2	*Some Common Approximations	334
15.2.3	Electron–Electron Scattering in the Parabolic Band Approximation	334
15.2.4	Impact Ionization	337
15.3	*Long-Range Coulomb Interactions and Band-Gap Narrowing	343
15.3.1	Classical Model	343
15.3.2	Quantum Corrections	345
	Problems	348
	References	348

16 Radiative Processes: The Dipole Approximation	351
16.1 Electron–Photon Hamiltonian	351
16.1.1 The Dipole Approximation	352
16.2 Transition Rates	354
16.2.1 Absorption Spectrum	354
16.3 Radiative and Non-radiative Transitions	356
Problems	356
References	357
 Part V Electronic Transport	
17 Overview of Quantum-Transport Formalisms	361
17.1 Overview	361
17.2 Ballistic Transport	363
17.2.1 Quantum Conductance	364
17.2.2 Open Boundary Conditions	365
17.2.3 Normalization	368
17.2.4 Numerical Approach	368
17.2.5 Green’s Function Approach	372
17.3 Non-equilibrium Green’s Functions	376
17.4 Wigner Distribution Functions	378
