

Contents

1	Linear Estimators of a Random Parameter Vector	1
1.1	Linear Estimator, Optimal in the Root-Mean-Square Sense	1
1.2	Vector Measure of Nonlinearity of Vector Y_1 in Relation to Vector θ	6
1.3	Decomposition of Path of Observations to the Recurrence Algorithm	7
1.4	Recurrent Form of Algorithm for Estimator Vector	9
1.5	Problem of Optimal Linear Filtration	13
1.6	Problem of Linear Optimal Recurrent Interpolation (Problem of Optimal Smoothing)	16
	References	18
2	Basis of the Method of Polynomial Approximation	19
2.1	Extension Sets of Observations: The Heuristic Path for Nonlinear Estimation	19
2.2	The Statistical Basis	20
2.3	Polynomial Approximation	22
2.4	Calculating Statistical Moments and Choice of Stochastic Measure	24
2.5	Fragment of Program of Modified Method of Trapezoids	27
	Reference	28
3	Polynomial Approximation and Optimization of Control	29
3.1	Introduction	29
3.2	Problem of Polynomial Approximation of a Given Function	30
3.3	Applied Examples	32
3.3.1	Detection of a Polynomial Function	32
3.3.2	Approximation Errors for a State Vector of Dynamic Systems	33
3.4	Polynomial Approximation in Control Optimization Problems	35
3.5	Optimization of Control by a Linear System: Linear and Quadratic Optimality Criteria	38

3.6	Approximate Control Optimization for a Nonlinear Dynamic System	41
3.7	Polynomial Approximation with Random Errors	42
3.8	Identification of a “Black Box”	43
	References	44
4	Polynomial Approximation Technique Applied to Inverse Vector-Function	45
4.1	Introduction.	45
4.2	The Problem of Polynomial Approximation of an Inverse Vector-Function	48
4.3	A Case Where Multiple Root Vectors Exist Along with Partitioning of the a Priori Domain	53
4.4	Correctness of the Estimator Algorithm and a Way of Taking Random Observation Items into Account	54
4.5	Implementations of the Polynomial Approximation Technique Applied to the Inverse Vector-Function.	56
4.6	Numerical Solutions of Underdetermined and Overdetermined Systems of Linear Algebraic Solutions	59
4.7	Solving Simultaneous Equations with Nonlinearities Expressed by Integer Power Series.	63
4.8	Solving Simultaneous Equations with Nonlinearities Expressed by Trigonometric Functions, Exponentials, and Functions Including Modulus	65
4.9	Solving a Two-Point Boundary Value Problem for a System of Nonlinear Differential Equations.	66
4.10	The System of Algebraic Equations with Complex-Valued Roots	68
	References	70
5	Identification of Parameters of Nonlinear Dynamic Systems; Smoothing, Filtration, Forecasting of State Vectors	71
5.1	Problem Statement	71
5.2	Heuristic Schemes of a Simple Search and an Organized Search	74
5.3	Mathematical Model to Test Algorithms.	75
5.4	Organized Search with the MATLAB Function f_{\min}	77
5.5	System of Implicit Algebraic Equations	79
5.6	Contraction Operator	80
5.7	Computational Scheme of Organized Search in Bayes Interpretation	84
5.8	Smoothing, Filtration, and Forecasting (SFF) by Observations in Noise for a Nonlinear Dynamic System	88

5.8.1	Mathematical Model of Dynamic System and Observations	89
5.8.2	Conceptual Algorithm for Smoothing, Filtration, and Forecasting (SFF Algorithm).	90
5.8.3	Qualitative Comparison of SFF Algorithm and $P\Phi K$ Algorithm.	92
5.8.4	Recurrent form of the SFF (RSFF) Algorithm.	94
5.8.5	About Computation of a Priori First and Second Statistical Moments	96
5.8.6	Evaluation of the Initial Conditions and Parameter of the Van der Pol Equation	97
5.8.7	Smoothing and Filtration for a Model of a Two-Level Integrator with Nonlinear Feedback	98
5.8.8	The Solution of a Problem of a Filtration by the EKF Algorithm	100
5.8.9	Identification of Velocity Characteristic of the Integrator and of the Nonlinearity of the Type "Backlash"	100
5.9	A Servo-System with a Relay Drive and Hysteresis Loop.	102
5.10	Evaluation of Principal Moments of Inertia of a Solid	103
5.11	Nonlinear Filtration at Bounded Memory of Algorithm	105
	References	108
6	Estimating Status Vectors from Sight Angles	109
6.1	Space Object Status Vector Evaluation.	109
6.1.1	Equations of Motion and Observation Data Model.	110
6.1.2	Scheme of Estimator	110
6.1.3	Model Predictions	113
6.2	Estimation of the Air- and Space-Craft Status Vector, Local Vertical Orientation Angles, and AC-Borne Sighting System Adjustment	115
6.2.1	Primary Navigation Errors and Formulation of the Problem	117
6.2.2	Navigation Parameters: The Nonlinear Estimation Problem	119
6.2.3	Calculation Model and Estimation Results	121
	References	123
7	Estimating the Parameters of Stochastic Models	125
7.1	Introduction.	125
7.2	The Basic Structure of the Algorithm-Estimator	128
7.3	Statistics and Empirical Frequencies.	129
7.4	The Law of Large Numbers	130
7.5	A Bayesian Statistical Construction	135

7.6	Estimating Hidden Markov Model Parameters by the Algorithm-Estimator.	136
7.7	Introduction.	140
7.7.1	Maximum Likelihood Method of Observing Instants of Direct Transitions	141
7.7.2	Algorithm of Estimating Observation States in Instants of Indirect Transitions	143
7.7.3	A Numerical Example	145
7.8	Introduction and Statement of the Problem	148
7.8.1	Basic Scheme of the Proposed Nonlinear Filtration Algorithm	150
7.8.2	Effective Work of Nonlinear Filtration Algorithm at Estimating States of a Nominal Model Markov Random Process if Random Observation Errors are Large and Uniformly Distributed in $[-100, 100]$. . .	154
7.9	Introduction.	156
7.10	Fundamentals of the Method	158
7.11	Parameter Estimation for a Nonlinear STGARCH Model	162
7.12	Parameter Estimation for a Multivariate MGARCH Model . . .	164
7.13	Conclusions.	166
	References	167
8	Designing Motion Control to a Target Point of Phase Space	169
8.1	Introduction.	169
8.2	Setting Boundary Value Problems and Problem-Solving Procedures	170
8.3	Necessary and Sufficient Conditions for Time-Optimal Control	173
8.4	The Stages of the Calculation Process	176
8.5	Near-Circular Orbit Correction in Minimum Practicable Time Using Micro-Thrust Operation of Two Engines.	177
8.6	Correcting the Near-Circular Orbit and Position of the Earth Satellite Vehicle in Minimum Practicable Time Using Micro-Thrust Operation of Two Engines.	182
	References	186
9	Inverse Problem of Dynamics: The Algorithm for Identifying the Parameters of an Aircraft	187
9.1	Introduction.	187
9.2	Statement of the Problem and Basic Scheme of the Identification Algorithm	189
9.3	Identification of Aerodynamic Coefficients of the Pitching Motion for a Pseudo F-16 Aircraft.	193
9.3.1	Pitching Motion Equations	194

9.3.2	Parametric Model of Aerodynamic Forces and Moments	198
9.3.3	Transient Processes of Characteristics of Nominal Motions.	199
9.3.4	Estimating Identification Accuracy of 48 Errors of Aerodynamic Parameters of the Aircraft.	200
9.4	Conclusions.	200
	References	201

Dynamic Systems Models

New Methods of Parameter and State Estimation

Boguslavskiy, J.A. - Borodovsky, M. (Ed.)

2016, XX, 201 p., Hardcover

ISBN: 978-3-319-04035-6
