**Part I Behavior and Goal Modeling as Semantic Foundations
of Interactive Modeling and Simulation**

1	Introduction to Interactive Modeling and Simulation	3
1.1	Business Systems	3
1.2	Behavior Modeling	4
1.3	The Need for Interactivity	5
1.3.1	Existing Practice	5
1.3.2	Tendencies that Demand Changes in the Existing Practice	6
1.3.3	Interaction as a Pair of an Event and a System Reaction	7
1.3.4	Interaction as a Pair of a Requirement and Its Executable Model	8
1.4	Definition of Interactive Modeling and Simulation	9
1.5	Further Organization of the Book	10
	References	11
2	Behavior Modeling for Interaction	13
2.1	Semantic Predecessors	14
2.1.1	Finite State Machine	14
2.1.2	Holistic Approaches	18
2.1.3	Compositional Approaches	22
2.2	Protocol Modeling	28
2.2.1	Semantics of Protocol Modeling	29
2.2.2	Protocol Modeling Notation	31
2.2.3	Example of a Protocol Model	34
2.2.4	Observational Consistency in Protocol Models	40
2.2.5	Local Reasoning on Protocol Models	42
2.3	Protocol Modeling and Conceptual Modeling	42
	Problems	43
	References	44

3	Goal Modeling for Interaction	47
3.1	What Is a Goal?	48
3.2	Goal Modeling and Refinement	49
3.2.1	Goal Refinement Tree	49
3.2.2	Example of a Goal Tree of an Information System for an Insurance Application	50
3.2.3	Example of a Security Goal	51
3.2.4	Completeness of Refinement	51
3.2.5	Tactics of Refinement	52
3.3	Example: Goal Model of an Insurance Application	53
3.3.1	Main Goals of an Insurance System	53
3.3.2	What Does It Mean “A Product Is Composed”?	54
3.3.3	What Does It Mean “A Policy Is Bought by a Registered Customer”?	56
3.3.4	What Does It Mean “A Claim of a Client with a Bought Policy Is Handled”?	56
3.3.5	A Goal Refinement Tree as a Structured Source of Information	58
3.4	Final Remarks	59
	Problems	59
	References	60

Part II Integration of Behavior and Goal Modeling for Interactive Modeling and Simulation

4	Mastering Interactive Modeling and Simulation with an Insurance Case	63
4.1	What Is Comparable in Goal Models and Protocol Models?	64
4.1.1	Quiescent States	64
4.1.2	A Requirement Can Be Mapped on a Protocol Machine	64
4.2	Combination of Methods and Tool Support	65
4.2.1	EXTREME (EXecuTable Requirements Management and Evolution)	65
4.2.2	ModelScope. Tool Requirements	65
4.3	Input for Protocol Modeling - Insurance Case	66
4.4	Identification of Concepts	67
4.5	Identification of Events and Transitions	68
4.5.1	Simulation of the Protocol Model “Medical Procedure”	69
4.6	Two Protocol Machines: “Medical Procedure” Is Included into a “Group”	70
4.7	Identification of Behavior Aspects	72
4.8	Submodel for Interaction with a Product Manager	74
4.8.1	Goal G.1. A Product Is Composed	74
4.8.2	Identification of the Actor: Product Manager	77

4.9	Submodel for Interaction with a Customer	79
4.9.1	Goal G.2: A Registered Customer Bought a Policy.	79
4.9.2	Generation of Internal Events	81
4.9.3	Goal G 3: A Claim of a Client with a Bought Policy Is Handled	84
4.9.4	Actor: Insurance Client	86
4.10	Simulation	87
4.11	Conclusion	87
	Problems.	88
	References.	88
5	Examples of Business Models	89
5.1	Example 1: Library.	89
5.1.1	Goals and Requirements	89
5.1.2	Model Discovery and Code of the Protocol Model	91
5.1.3	Model Simulation	96
5.1.4	Model Reuse and Extensions as Modeling Exercises	97
5.2	Example 2: Mobile Phone with a Phone Book.	98
5.2.1	Goals and Requirements	98
5.2.2	Model Discovery.	99
5.2.3	Code of the Protocol Model	100
5.2.4	Model Simulation	103
5.3	Example 3: Formal Accreditation of Prior Learning	105
5.3.1	Goals and Requirements	105
5.3.2	Model Discovery.	106
5.3.3	Code of the Protocol Model	109
5.3.4	Model Simulation	116
5.4	Example 4: Preparation of a Document by Several Participants	117
5.4.1	Goals and Requirements	117
5.4.2	Model Discovery.	118
5.4.3	Code of the Protocol Model	120
5.4.4	Model Simulation	127
	Problems.	128
	References.	128

Part III Performance Indicators, Motivation and Communication in Interactive Models

6	Interactive Modeling and Simulation of Performance Indicators . . .	131
6.1	Static Definitions of Performance Indicators.	132
6.2	Constructive Definition of KPIs and Their Properties.	134
6.3	KPIs of the Program for Improving Access to Psychological Therapies	137

6.4	Interactive Modeling and Simulation for Validation of KPIs	137
6.4.1	A Document with KPI Definitions	137
6.4.2	Identification and Relating the Business Goals and the Measurement Goals	139
6.4.3	Conceptual Modeling of KPIs and the Related Processes in the Organization	140
6.4.4	Protocol Modeling of Concepts, Including KPIs	140
6.4.5	Validating the KPI Properties	147
6.5	Final Remarks	150
	Problems.	150
	References.	151
7	Motivation Modeling for Interactive Simulation	153
7.1	Motivation and Business.	153
7.2	Motivation Modeling	154
7.3	Protocol Models with Motivation	156
7.3.1	CAN-UPDATE Protocol Model	157
7.3.2	WANT-Model	159
7.3.3	The Code of the Protocol Model.	161
7.3.4	Motivation Model for a Composition of Goals	164
7.4	Usage of Motivation Models	164
	Problems.	164
	References.	165
8	Modeling and Simulation of Multiparty Communication	
	Businesses	167
8.1	Multiparty Communication Businesses	167
8.2	Design of Choreography by Example.	169
8.3	Realizability of Choreography	174
8.3.1	Choreography as a Protocol Model	175
8.4	Reduction of a Choreography to Its Participants.	179
8.4.1	Simple Reduction	179
8.4.2	Exact Reduction	180
8.4.3	Protocol Model of the Simplified Ordering Process Reduced to the Participants	182
8.5	Shared Buying: A Choreography Presented as a Composition of Two Parallel Processes.	186
8.6	An Auction: A Choreography with an Unknown Number of Parallel Processes.	188
8.7	Concluding Remarks	195
	Problems.	195
	References.	196
	Future Research Opportunities	197
	Index	199

Interactive Modeling and Simulation in Business System
Design

Roubtsova, E.

2016, XIV, 201 p. 63 illus., 23 illus. in color., Hardcover
