

Contents

1	Heisenberg Quantization and Weyl Quantization	1
1	Heisenberg and Weyl Quantizations	1
2	* From Heisenberg to Weyl Quantization	3
3	Stone-von Neumann Theorem and Schrödinger Quantum Mechanics	6
2	Delocalization, Gauge Invariance and Non-regular Representations	11
1	Delocalization and Gauge Invariance	11
2	The Representation Defined by a Translationally Invariant State	13
3	Bloch Electron and Non-regular Quantization	15
4	Gauge Invariance and Non-regular Canonical Quantization	20
4.1	Gauge Invariance and Superselection Rules	20
4.2	Gauge Invariance in the Two-Body Problem	21
4.3	Non-regular Representations and Symmetry Breaking	22
4.4	Goldstone Theorem and Non-regular Representations	24
4.5	Bloch Electron as a Gauge Model	27
5	Quantum Hall Electron: Zak States	29
3	Quantum Mechanical Gauge Models	35
1	Quantum Particle on a Circle	35
2	Jackiw Model of Gauss Law Constraint	38
3	Christ-Lee Model	41
4	A QM Model of QCD Structures and of Josephson Effect	43
4	Non-regular Representations in Quantum Field Theory	53
1	Quantum Field Algebras and Quantizations	53
2	Massless Scalar Field in 1+1 Dimensions	57
3	Temporal Gauge in QED	60
4	Temporal Gauge in QCD: Chiral Symmetry Breaking	64
4.1	Gauss Law and Gauge Transformations	64
4.2	Large Gauge Transformations	68
4.3	Fermions and Chiral Symmetry Breaking	71
5	Abelian Chern-Simons Theory	74

5	Diffeomorphism Invariance and Weyl Polymer Quantization	77
1	Diffeomorphism Invariance and Weyl Polymer Quantization	77
2	Quantum Mechanics on a Manifold and Diffemorphism Invariance ...	78
6	* A Generalization of the Stone-von Neumann Theorem.....	85
1	Zak Algebra	85
2	A Generalization of Stone-von Neumann Theorem	86
	Bibliography	91
	Index.....	95

Gauge Invariance and Weyl-polymer Quantization

Strocchi, F.

2016, X, 97 p., Softcover

ISBN: 978-3-319-17694-9
