

Contents

1	Introduction	1
1.1	Motivation	1
1.2	Research Objective and Approach	3
2	Aluminium Die Casting and Its Environmental Aspects	7
2.1	Industrial Value Chains and Aluminium Die Casting	7
2.1.1	Industrial Process, Process- and Value Chains	7
2.1.2	Aluminium Die Casting	15
2.2	Environmental Aspects of Aluminium Die Casting	36
2.2.1	Energy and Resource Efficiency	36
2.2.2	Methods and Tools for Increasing Energy and Resource Efficiency	39
2.2.3	Environmental Impacts of Aluminium Die Casting	48
3	Existing Approaches	65
3.1	Background for Selection and Evaluation of Existing Approaches	65
3.1.1	Procedure and Limitations of Analysis	66
3.1.2	Definition of Criteria	68
3.2	Review on Relevant Research Approaches	73
3.2.1	Generic Approaches	73
3.2.2	Specific Approaches for Metal Casting	78
3.3	Comparative Overview	83
3.4	Derivation of Further Research Demand	87
4	Multi-level Multi-scale Framework for Enhancing Energy and Resource Efficiency in Production	91
4.1	Research Methodology	91
4.2	Requirements and Surrounding Conditions	92

4.3	Framework Development	96
4.3.1	Module 1—System Definition	97
4.3.2	Module 2—Procedural Approach	109
4.3.3	Module 3—Methodological Toolbox	113
5	Multi-level Multi-scale Framework for Enhancing Energy and Resource Efficiency in Aluminium Die Casting	125
5.1	Course of Discussion	125
5.2	Specific Framework for Aluminium Die Casting	127
5.2.1	Actors and System Levels	127
5.2.2	Assignment of Selected Methods and Tools to System Elements	129
5.2.3	Specific Procedure for Aluminium Die Casting Production	137
5.3	Objects of Investigation	138
5.3.1	Actors	139
5.3.2	Products	140
5.4	Definition of System Boundaries	142
5.5	Structural Analysis of Energy and Resource Flows	143
5.5.1	System Elements	143
5.5.2	Considered Energy and Material Flows	148
5.5.3	Synthesis of a Generic Structural Model	152
5.6	Hot Spot Analysis of Energy Demands	161
5.6.1	Foundry 1 (Products 1 and 2)	162
5.6.2	Foundry 2 (Products 3, 4 and 5)	163
5.6.3	Foundry 3 (Product Families 6–12)	164
5.6.4	Conclusion of Hot Spot Analysis	164
5.7	Data Acquisition	165
5.7.1	Alloy Supplier	165
5.7.2	Foundry	169
5.7.3	Upstream Process Chains	181
5.8	Modelling, Simulation and Visualisation	183
5.8.1	Input and Output Modelling of System Elements	184
5.8.2	Simulation of the Generic Quantitative Model	195
5.8.3	Visualisation of Energy and Resource Flows	197
5.9	Analysis and Evaluation of the Generic Model	201
5.9.1	Actor Specific Energy Demand Evaluation	202
5.9.2	Environmental Assessment	203
5.9.3	Sensitivity Analyses	204
5.10	Improvement Scenarios	209
5.10.1	Description of Improvement Measures	211
5.10.2	Comparative Evaluation of Improvement Measures	218

6 Summary and Outlook 223

6.1 Summary 223

6.2 Concept Evaluation 224

6.3 Outlook. 227
