

Contents

Part I Theoretical Foundations

1 Introduction	3
1.1 Fuzzification Block (Fuzzification)	7
1.2 The Base of Fuzzy Rules	9
1.3 The Mamdani Model	10
1.3.1 Reasoning Machine (Inference)	10
1.3.2 Defuzzification	24
1.4 The Takagi-Sugeno Model	25
1.5 Controller Adjustment	33
1.6 Summary	33
References	34

Part II Fuzzy Logic Toolbox, Matlab, Simulink

2 Introduction	37
2.1 FIS Editor	37
2.2 Membership Function Editor	40
2.3 Rule Editor, Rule Viewer, Surface Viewer	40
2.4 ANFIS <i>Adaptive Neuro-Fuzzy Inference System</i>	44
2.4.1 The ANFIS Editor	45

Part III An Application of Descriptive Fuzzy Control in Environmental Engineering

3 Fuzzy Controller(s) for a Flood Wave Passing Through a Hypothetical Retention Reservoir	63
3.1 Preface	63

3.2	FIS (<i>Fuzzy Inference System</i>) a Control System Using the Mamdani Controller	64
3.3	A Control System Using the Takagi-Sugeno (ANFIS) Controller	72
3.4	A Control System for a Retention Reservoir Using Fuzzy Controllers in a Hierarchical Configuration	80
3.5	Summary	91
	References	91
4	Control of a Flood Wave Passage Through the Dobczyce Reservoir (Poland) Using Fuzzy Controllers	93
4.1	Preface	93
4.2	Control According to a Classic Control Rule	93
4.3	Control of Outflow from the Reservoir Using a Mamdani Fuzzy Controller Type A	98
4.4	Control Using a Mamdani Fuzzy Controller Type B	102
4.5	Summary	106
5	Fuzzy Controllers Operating Flood Wave Passage Through a Hypothetical Cascade of Retention Reservoirs.	109
5.1	Preface	109
5.2	Upper Reservoir, FIS (<i>Fuzzy Inference System</i>)	109
5.3	Lower Reservoir, FIS (<i>Fuzzy Inference System</i>)	112
5.4	Control System Using Fuzzy Controllers	115
5.5	Summary	119
	Reference	119
6	Using Fuzzy Controllers in Tracking the Vector of Controlled Trajectories in a Multi-reservoir Water-Management System	121
6.1	Preface	121
6.2	Optimisation Model	122
6.2.1	Implementation of Simulation and Specification of Results for a Hypothetical Scenario of Events	137
6.2.2	Summary	141
6.3	An Online Control System for an Optimisation Model Using Mamdani Structure (Type A) Controllers	142
6.3.1	Introduction	142
6.3.2	FIS (<i>Fuzzy Inference System</i>)	143
6.3.3	Control System Using Mamdani Fuzzy Controllers Type A, SISO	144
6.3.4	Conclusions Concerning the Use of Mamdani Controllers in Structure A	146

6.4	An Online Control System for an Optimisation Model Using Controllers in the Mamdani Structure (Type B) (MISO)	152
6.4.1	Introduction	152
6.4.2	FIS (<i>Fuzzy Inference System</i>)	152
6.4.3	Control System Using Type B Mamdani Controllers	153
6.4.4	Conclusions Concerning the Use of Mamdani Controllers in Structure B	158
6.5	An Online Control System for an Optimisation Model Using Controllers in the Takagi-Sugeno Structure (Types C and D). . . .	159
6.5.1	Introduction	159
6.5.2	FIS (<i>Fuzzy Inference System</i>) The Takagi-Sugeno Controller, Type C.	159
6.5.3	Control Ssystem Using Fuzzy Controllers (Takagi-Sugeno, Type C)	161
6.5.4	FIS (<i>Fuzzy Inference System</i>), The Takagi-Sugeno Controller, Type D.	163
6.5.5	Conclusions Concerning the Use of Takagi-Sugeno Controllers in Structures C and D	165
6.6	Comparison of Results for Control with Controllers in Structures A, B, C, D	166
6.7	Summary	173
7	A System Controlling Liquid Temperature Using Mamdani Fuzzy Controllers (SIMO).	175
7.1	Control System Structure	175
7.2	Specification of Control System Operation	176
7.3	Control Using the Mamdani Type Fuzzy Controller	180
7.4	The System Response to a Step Function	184
7.5	Examples of Adjustment Scenarios.	190
7.6	Summary	193
	Reference	193
8	The Use of Fuzzy Controllers That Allow Temperature Stabilisation in a Furnace with a Fluidised Pocket Bed	195
8.1	Preface	195
8.2	Simplified Energy Balance for a Boiler with a Pocket Bed	197
8.3	A Bed Temperature Control System Using Mamdani Fuzzy Controllers (SIMO).	202
8.4	A Bed Temperature Control System for a Virtual Installation with One Fuel Dispenser and One Primary Air Blower	206
8.4.1	A System Without Correction of the Fluidised Bed Output Temperature.	206

8.4.2	Correction System for Fluidised Bed Output Temperature Using Controllers in the Mamdani Structure	209
8.4.3	Correction System for Fluidised Bed Output Temperature During Bed Firing Up (Mamdani/SIMO)	215
8.4.4	A Correction System for Fluidised Bed Output Temperature During Bed Operation	219
8.4.5	Simulations of Operation for a System Controlling Fluidised Bed Temperature with Variable Input Parameters	233
8.4.6	Summary	252
	References	253
9	Application of Fuzzy Controllers to Operate Heating Systems in Buildings.	255
9.1	Preface	255
9.2	Model Guidelines and Physical Grounds	255
9.3	A Temperature Control System for a Model of a Room Heated by One Heat Source (Single Heater)	259
9.3.1	A System Without a Correction in the Heated Room Output Temperature	259
9.3.2	A Room Output Temperature Correction System Using Mamdani Controllers	262
9.3.3	A Controller Adjusting Room Temperature Within the Following Range $T \in [\approx 20\text{--}30\text{ }^{\circ}\text{C}]$ (Fig. 9.4)	263
9.3.4	Operation Simulations for a Room Temperature Adjustment System with Changeable Input Parameters	266
9.4	Simulations of Operation for a Temperature Adjustment System in Many Rooms Simultaneously with Changeable Input Parameters	274
9.5	Summary	275
	Reference	276
