1	Introduction	1
	Louis Laurent	
1.1	There's Plenty of Room at the Bottom.	1
1.2	A Short History	2
1.3	The Nanoworld.	4
	1.3.1 Matter on the Scale of a Few Atoms	4
	1.3.2 Electricity.	6
1.4	How Can We Make Such Tiny Objects?	7
	1.4.1 Self-Assembly	9
	1.4.2 Nanofabrication.	10
	1.4.3 Mimicking Nature	11
1.5	What's It All For?.	11
	1.5.1 Nanomaterials.	12
	1.5.2 Nanoelectronics.	12
	1.5.3 Biology, Nanomedicine, and Health.	13
1.6	The Debate.	13
1.7	Prospects	17
 Part I Nanophysics, Nanoelectronics, and Nanophotonics		
2	Overview of the Field	23
	Jean-Michel Lourtioz	
2.1	Is There a Road Map for Nanophysics? The Example of Nanoelectronics.	24
2.2	Higher Performance and More Versatile Nanotechnologies . . .	28
	2.2.1 Two Complementary Approaches	28
	2.2.2 General Features of Fabrication Processes	29
	2.2.3 High-Resolution Lithography	30
	2.2.4 Etching	31
	2.2.5 Atomic Scale Deposition and Surface Treatments . . .	32

2.2.6	Nanoimprinting: Cheap Nanometers per Square Meter	34
2.2.7	Nano ‘Lego’ and New Methods for 3D Assembly . . .	36
2.3	Gaining in Length: From Clusters and Quantum Dots to Nanotubes, Nanowires, and Nanoribbons	37
2.3.1	Fabrication of Nano-Objects	38
2.3.2	Physical Properties of Nano-Objects	44
2.3.3	Lycurgus Cup	46
2.4	Viewing and Manipulating Nanostructures: A Diversity of Microscopes	48
2.4.1	Very High Resolution Transmission Electron Microscopy	49
2.4.2	Scanning Tunnelling Microscopy: Imaging and Manipulation	50
2.4.3	Atomic Force Microscopy	52
2.4.4	Scanning Near-Field Optical Microscopy: Observation and Manipulation	53
2.4.5	A Few Remarks	56
2.5	Tomorrow’s Nanoelectronics. The Challenge of Zero Consumption.	56
2.5.1	MOS Transistors and Current Technology	57
2.5.2	Spin Electronics and Nanomagnetism	61
2.5.3	Quantum Components	67
2.5.4	Components Involving Few Electrons	68
2.5.5	Molecular Electronics	69
2.5.6	Memristors and Neurally-Inspired Architectures	70
2.5.7	Conclusion	71
2.6	Is Nanophotonics an Exact Parallel of Nanoelectronics?. . . .	72
2.6.1	Optical Micro- and Nanosources, Lasers, and Controlled Photon Sources	73
2.6.2	Photonic Crystals and Metamaterials	76
2.6.3	Plasmonics for Photovoltaics or Biosensing	78
2.6.4	Telecommunications and Optical Interconnects: Links Between Photonics and Electronics.	80
2.6.5	Photonics at Extreme Wavelengths: Ultraviolet and Terahertz	81
2.7	Nanophysics: Genuinely Cross-Disciplinary Physics	83
2.7.1	Nanowires in Electromechanical Microsystems	83
2.7.2	Nanobiotechnology: Convergence Between the Physical Sciences and the Life Sciences	85
2.8	Nanophysics: What Future?	88
	References.	90

3	Applications I. From Nanometers to Megawatts:	
	Photovoltaic Applications	95
	Bruno Ghyselen	
4	Applications II: The Secret Revolution of Magnetic Sensors	103
	Claude Fermon	
4.1	Spin Valves and Magnetic Sensors	104
4.2	A First Application: Angle Sensors	105
4.3	An Essential Application for the Automobile	105
4.4	Detecting Very Weak Magnetic Fields	106
4.5	Measuring Currents	107
4.6	Biomagnetism and Ultralow Field MRI	107
4.7	Prospects	109
	Reference	109

Part II Nanomaterials and Nanochemistry

5	Overview of the Field	113
	Christine Vautrin-UI	
5.1	Introduction: Nanochemistry	113
5.2	Carbon and Its Nanostates	116
5.2.1	Carbon-Based Nanomaterials: Zero-Dimensional Structures or Nanoparticles	117
5.2.2	Carbon-Based Nanomaterials. One-Dimensional Structures: Carbon Nanotubes	123
5.2.3	Carbon-Based Nanomaterials. Two-Dimensional Structures: Graphene	126
5.2.4	Carbon-Based Nanomaterials. Three-Dimensional Structures	132
5.3	Nanochemistry in the Service of Nanomaterials: From Molecular to Supramolecular Chemistry	137
5.3.1	Click Chemistry: Molecular Methods	138
5.3.2	Self-Assembly and Supramolecular Chemistry	141
5.4	Functionalisation of Materials	148
5.4.1	The Many Roads to Functionalisation by Chemical Methods in Gas Phase or in Solution	149
5.4.2	Example of Chemical Functionalisation: Self-Assembled Monolayers	150
5.4.3	Electrochemical Functionalisation: Electrografting by Reduction of Diazonium Salts	151

5.5	Different Approaches to Chemical Synthesis of Nanomaterials	153
5.5.1	Synthesis of Metal Nanoparticles: Colloidal Solutions of Transition Metals	154
5.5.2	Molecular Imprinting for Nanostructured Materials	162
5.5.3	Multifunctional Hybrid Nanomaterials Produced by Soft Chemistry	163
5.6	Conclusion	171
	References	172
6	Applications I: Nanolubricants	175
	Fabrice Dassenoy	
6.1	Why Nano?	176
6.2	Tribological Properties of Nanoparticles	177
6.3	Mechanism of Lubrication by IF-MeS ₂ Nanoparticles	178
6.4	Conclusion	181
	References	181
7	Applications II: Nanocrystallites in Cement: What Future After Two Thousand Years?	183
	Abdi Feylessoufi	
7.1	A Material Full of Surprises	183
7.2	The Roman's Were Here	184
7.3	Late Rediscovery and a Burst of Development	185
7.4	Ultra-High Performance Concretes	186
7.5	Toward Nanometric Sizes	187
7.6	More Rigid Nanocrystallites	188
7.7	Progress in Nanocrystallite Thermodynamics	188
7.8	Better Resistance to Wear and Tear	188
7.9	The Beginning of the Twenty-First Century: A Clear Future	189
7.10	The Scientific Challenge	192
7.11	The Industrial Challenge	194
7.12	The Many Remaining Obstacles	195
	References	197
8	Applications III. Nano-TiO₂	199
	François Tardif	
8.1	Applications of 250–350 nm TiO ₂ Particles: From Paints to Foods	200
8.2	Titanium Dioxide Nanoparticles (<100 nm): From Anti-UV Films to Elimination of Pollutants	200
8.2.1	Anti-UV Films	201
8.2.2	Application to Photocatalysis	202
8.2.3	Application to Photovoltaics	202

8.3	Toxicity of Nano-TiO ₂	204
	References	205

Part III Nanobioscience, Nanomedicine, and Nanotoxicology

9	Nanobiosciences: New Ideas and Tools for Investigating and Manipulating Living Systems	209
	Maxime Dahan	
9.1	Nano-Objects as Functional Probes for Nanoscale Exploration of Living Systems	210
9.2	Tracking Single Biomolecules in the Cell	211
9.3	Manipulating Living Systems on the Molecular and Cellular Scales	214
9.4	Nano-Objects for Diagnosis and Therapy: The Prospect of Nanomedicine	216
9.5	Conclusion and Prospects	217
	References	218
10	Nanomedicine and Nanotechnology for Medicine	219

10.1	Nanomedicine or Nanotechnology for Medicine?	221
10.2	The Ideal Length Scale in Medicine	222
10.3	The Nanoscale: A Medical Eldorado?	224
10.4	Medical Diagnostics	226
	10.4.1 Medical Laboratories	226
	10.4.2 Medical Imaging Revisited	229
	10.4.3 Smaller and Smaller Implants and Sensors	231
	10.4.4 Personalised Medicine	233
10.5	Therapy	234
	10.5.1 Drug Nanodroplets and Nanocarriers	235
	10.5.2 Drug Pumps	237
	10.5.3 Physical Destruction of Tumours	238
10.6	Combining Diagnosis and Therapy: Theranostics	240
10.7	Regenerative Medicine	242
	10.7.1 Stem Cells and Cell Therapy	243
	10.7.2 Biomaterials	244
10.8	Is Nanotechnology Essential to Medicine?	246
10.9	Nanomedicine and Ethical Questions	247
10.10	Regulating Nanodrugs	248
10.11	A Newly Emerging Industry	249
10.12	The Situation in France Today	250
10.13	Nanomedicine: Evolution or Revolution?	251
	References	252

11 Squalenoylation: A Novel Technology for Anticancer and Antibiotic Drugs with Enhanced Activity.	253
Patrick Couvreur	
11.1 Origin of the Concept of Squalenoylation.	255
11.2 Coupling Squalene with Drug Molecules	256
11.3 Characteristics and Morphology of the Main Squalene Derivatives	257
11.4 Applications to Cancer Treatment	257
11.4.1 Nanoparticles of Gemcitabine Coupled with Squalene.	257
11.4.2 Nanoparticles of Doxorubicin Coupled with Squalene.	263
11.4.3 Nanoparticles of SiRNA Coupled with Squalene (SQsiRNA).	264
11.5 Application to Treatment of Infectious Diseases	264
11.5.1 Antiretroviral Nucleoside Analogues	264
11.5.2 Intracellular Antibiotherapy	265
11.6 Application to the Treatment of Neurological Disorders.	266
11.7 Magnet Guidance, Imaging, and Theranostics	267
11.8 From Squalenoylation to Terpenoylation	269
11.9 Conclusion.	271
References.	271
12 Health Impacts of Nanomaterials.	273
