

Contents

Acronyms and Abbreviations	xiii
The Key Messages of the Book	xv
Outline of the Book	xix
References.....	xxii
 Part I Generalized TP Model Transformation	
1 Basic Concepts	3
1.1 Notations.....	3
1.2 TP Function.....	4
1.3 TP Model of qLPV Systems	5
1.4 TP Model: TS Fuzzy Model	6
1.5 HOSVD and Quasi-HOSVD Based Canonical Form of TP Functions	8
References.....	10
2 Algorithms of the TP Model Transformation	11
2.1 Original TP Model Transformation	11
2.1.1 Numerical Example	14
2.2 Bi-Linear TP Model Transformation	17
2.2.1 Numerical Example	22
2.3 Enriched TP Model Transformation.....	24
2.3.1 Numerical Example	25
2.4 Convex TP Model Transformation: Convex Hull Manipulation ...	25
2.4.1 Numerical Example	28
2.5 Pseudo TP Model Transformation.....	35
2.6 Partial TP ⁺ Model Transformation.....	43
2.6.1 Numerical Example	44
2.7 Multi TP Model Transformation.....	48
2.7.1 Numerical Example	49
	vii

2.8	Generalized TP Model Transformation	52
2.9	Interpolation of the Weighting Functions	54
2.9.1	Numerical Example	55
2.10	Unifying the Weighting Functions	59
2.11	Operations Between TP Functions	60
2.12	Towards Approximation in Case of Non-TP Functions	61
	References	62
 Part II TP Model Transformation Based Control Design and Optimization Frameworks		
3	TP Model Transformation is a Gateway Between Identification and Design	65
	References	66
4	TP Model Transformation Based Control Design Structure	69
	References	71
5	General Stability Verification and Control Design	73
5.1	Key Idea	73
5.2	Example	74
5.3	Decoupling the Design, Optimization, and Stability Verification: Generalized Design Frameworks	77
5.3.1	Multi-Way Convex Manipulation	79
5.3.2	Main and Independent TP Model Component Analysis via the HOSVD Based Canonical Form	82
5.3.3	Convex Hull Manipulation	82
5.3.4	LMI Based System Design	83
5.3.5	Exact System Reconstruction: Unified TP Model Forms	84
5.3.6	LMI Based Stability Verification	86
	References	86
6	TP^I Model Transformation for the Class of Non-qLPV Models	87
6.1	Key Idea	87
6.2	TP ^I Model Transformation	88
6.3	Example of Re-identification	89
	Reference	89
7	TP^r Model Transformation for Systems Including Time Delay	91
7.1	TP ^r Model Transformation	91
7.2	Example of the TP ^r Model Transformation	92
	References	93
 Part III Analysis of the TP Model Based Design Frameworks via a Complex Example		
	References	95

8	qLPV Model of the 3DoF Prototypical Aeroelastic Wing Section.....	97
8.1	Equations of Motion	97
8.2	Including Stribeck Friction	100
	Reference.....	101
9	TP Model Based Control Design	103
9.1	Exact and Convex TP Model of the 3DoF Aeroelastic Wing Section	103
9.2	Control Structure	104
9.3	Selecting LMIs	106
9.4	Results of the Control Design	107
9.4.1	Controller 1: Asymptotic Stabilization and Decay Rate Control.....	107
9.4.2	Controller 2: Constraint on the Control Value	107
9.4.3	Controller 3: State Feedback Control Including Stribeck Friction.....	108
9.4.4	Simulation	108
9.4.5	Evaluation.....	109
	References.....	115
10	Convex Hull Manipulation Based Optimization	117
10.1	Convex Hull Manipulation Based Design Framework	117
10.1.1	Key Steps	118
10.1.2	Step 1: Convex TP Models	118
10.1.3	Step 2: Convex TP Model Interpolation	118
10.1.4	Step 3: LMI Based Design and Stability Verification.....	120
10.2	Numerical Simulations	120
10.2.1	Determination of the Feasibility Region.....	120
10.2.2	Results of the Numerical Simulations	121
11	Complexity Manipulation Based Optimization	131
11.1	The Control Design Framework	131
11.1.1	Main TP Model Component Analysis: HOSVD Based Canonical Form of the Model	132
11.1.2	LMI Based System Design.....	133
11.1.3	Exact System Reconstruction: Unified Weightings in the Polytopes.....	137
11.1.4	LMI Based Stability Verification	137
11.1.5	Maximizing Omega	137
11.2	Evaluation of the Benefits of the Proposed Control Design.....	138
	References.....	144
12	TP Model Manipulation Influences the Control Performance and the Feasibility of LMI Based Design.....	145
12.1	Feasibility.....	145
12.1.1	Initialization of the Numerical Analysis.....	145

12.1.2	Results of the 2D Analysis: Feasibility and Convex Hull.....	146
12.1.3	Results of the 3D Analysis: Feasibility, Convex Hull, and Complexity.....	148
12.1.4	Results of the 4D Analysis: Feasibility, Convex Hull, Complexity, and Parameter Space.....	148
12.1.5	Summary	154
12.2	Control Performance	154
12.2.1	Control Performance Results of the Numerical Simulation	154
12.2.2	Evaluation and Comparison of the Derived Cases and the Best Solution.....	156
	Reference.....	160

Part IV TP Model Based Control Design of the Dual-Excenter Vibration Actuator

	References.....	162
13	qLPV Model of the Dual Excenter Vibration System	165
	References.....	170
14	Convex TP Model of the Dual Excenter Vibration System	171
14.1	The Quasi-HOSVD Based Canonical Form: Approximation and Complexity Trade-Off	171
14.2	The Convex TP Model	172
15	Derivation of the Controller	179
15.1	LMI Based Controller Design	179
15.2	Simulation	182
	Reference.....	184

Part V Control of the Impedance Model Including Varying Time Delay via TP^r Model Transformation

16	Impedance Control for Force Reflecting Telemanipulation.....	187
16.1	Impedance Control with Feedback Delay	188
16.2	Control Structure for Stability Preservation.....	190
	References.....	193
17	Impedance Model with Varying Feedback Delay in TP Model Form	195
17.1	The Quasi-HOSVD Based Canonical Form	195
17.1.1	Exact Quasi-HOSVD Based Canonical Form.....	195
17.1.2	Executing Trade-off by TP^r Model Transformation	198
17.2	Manipulation of the Convex Hull.....	199
17.2.1	The Vertices of the Exact TP Model.....	204
17.2.2	The 5 Vertices of the Reduced TP Model	208

17.2.3	The 4 Vertices of the Reduced TP Model	210
17.2.4	The 3 Vertices of the Reduced TP Model	211
17.3	Validation of the Convex TP Model	211
17.3.1	Constant Time-Delay	212
17.3.2	Varying Time-Delay	214
	Reference	215
18	TP^r Transformation Based Control Design for Impedance Controlled Robot Gripper	217
18.1	The Control Problem	217
18.2	Execution of the TP ^r Model Transformation	218
18.3	LMI-Based Multi-Objective Controller and Observer Design	218
18.4	Resulting Controller and Observer Gains	219
18.4.1	Controller-Observer 1	220
18.4.2	Controller-Observer 2	220
18.4.3	Controller-Observer 3	221
18.5	Evaluation and Validation of the Control Design	221
	References	230

TP-Model Transformation-Based-Control Design
Frameworks

Baranyi, P.

2016, XXVI, 230 p. 120 illus., 52 illus. in color.,

Hardcover
