1	Introduction	1
	References	4
2	Introduction to Friction	7
2.1	The Phenomenological Laws of Friction	7
2.1.1	Stick-Slip Motion	8
2.1.2	Ageing and Violation(s) of the Third Law	14
2.2	The Microscopic Origin of Friction Laws	17
2.2.1	Preliminary: What is the Atomic Origin of Friction? . . .	18
2.2.2	Roughness	19
2.2.3	Real Contact Area	27
2.2.4	Ageing of Contact and Its Consequences	39
2.3	Conclusion: Friction Involves Randomness and Viscoelasticity	44
	References	46
3	Application of Friction to Seismic Faults	49
3.1	Phenomenology of Faulting and Earthquakes	49
3.1.1	Faults	49
3.1.2	Earthquakes: Individual Characteristics	52
3.1.3	Earthquakes: Statistical Properties	55
3.2	A Few Earthquakes Models	58
3.2.1	The Burridge-Knopoff Model (Spring-Block Model) . . .	59
3.2.2	Cellular Automata	60
3.2.3	Finite Elements	64
3.3	Conclusion: Earthquakes as Test Cases	64
	References	65

4	Elastic Interfaces Driven in Disordered Media	67
4.1	The Elastic Interface in a Disordered Medium	67
4.1.1	Construction of the Model	68
4.1.2	The Depinning Transition (Constant Force Driving)	72
4.1.3	Scaling Relations	77
4.2	Avalanche Statistics at the Depinning Transition	79
4.2.1	Origin of the Elastic Drive	80
4.2.2	Construction of the Equation	80
4.2.3	The Depinning Transition (Elastic Driving)	82
4.2.4	A New Scaling Relation	84
4.2.5	Statistical Distributions	85
4.3	Mean Field Approaches	89
4.3.1	Introduction	89
4.3.2	The ABBM Solution	91
4.3.3	The Fokker-Planck Approach	94
4.4	Is the Depinning Framework Relevant to Friction?	100
4.4.1	Depinning: A Robust Universality Class	100
4.4.2	Depinning: A Model for Frictional Processes?	105
4.5	Conclusion: Elastic Depinning is not Friction	107
