

Contents

1 Principles of Neural Information Processing	1
1.1 Introduction	1
1.2 Structural and Functional Requirements	2
1.2.1 Basic Problems of the Overall System	2
1.2.2 Evolution and Brain	9
1.2.3 Biological Principles of the Nervous System	14
1.3 Function of the Overall System	23
1.3.1 Learning and Knowledge	24
1.3.2 Flexibility	32
1.3.3 Embedding of Neural Systems	33
1.3.4 Construction—An Operational Model	35
1.3.5 Prediction as a Systems Property	39
1.3.6 Dynamics of the Organization of Behavior	40
1.3.7 Aspects of an Interpretation—An Outside View	47
1.4 Structures in Neural Systems	51
1.4.1 Introduction	51
1.4.2 Elements and Their Coupling	52
1.4.3 Interaction of Processes	65
1.4.4 Selforganization	72
1.5 Aspects of Description	76
1.5.1 Models	76
1.5.2 Robustness	81
1.6 Social Aspects—Remarks	84
1.6.1 Language and Communication	84
1.6.2 Thinking	87
1.7 Remarks on Open Terms	90
1.7.1 Context	90
1.7.2 Modules	91
1.7.3 Complexity	91
1.7.4 Consciousness	93

1.8 Options for Technical Feasibility 94

1.9 A Viewpoint 97
