1	Introduction	1
1.1	Scope	1
1.2	Basics of Protection Relaying	2
1.3	Modeling and Simulation Methodology and Tools	3
1.3.1	Relay Elements Library	3
1.3.2	Signal Source Library and Analysis Tools	3
1.3.3	Relay Models and Power Network Elements Library	4
	References	8
2	Power System Fault Analysis and Short-Circuit Computations	9
2.1	Introduction	9
2.2	Symmetrical Components	10
2.2.1	Module 1: Analysis of a System with an Unbalanced Source Using Symmetrical Components	13
2.2.2	Module 2: Analysis of a System with Single Line-Ground Fault Using Symmetrical Components	17
2.3	Short-Circuit Analysis	22
2.4	Sequence Networks	26
2.4.1	Transmission Line	26
2.4.2	Load Model	35
2.4.3	Two-Winding Transformer	36
2.4.4	Synchronous Machine	37
2.4.5	Positive Sequence Network Model	37
2.4.6	Negative Sequence Network	39
2.4.7	Sequence Networks in Steady State	39
2.4.8	Induction Motor	40

2.5	Matrix Method for Short-Circuit Calculation	42
2.5.1	Matrix Computation Approach	42
2.5.2	Admittance and Impedance Approaches	44
2.6	Summary	44
	Reference	44
3	Basics of Protective Relaying and Design Principles	45
3.1	Introduction	45
3.2	Overcurrent Relaying	46
3.2.1	Introduction	46
3.2.2	Relaying Basics	46
3.2.3	Software Models	51
3.3	Impedance Relaying	57
3.3.1	Introduction	57
3.3.2	Relaying Basics	58
3.3.3	Software Models	64
3.4	Differential Relaying	68
3.4.1	Introduction	68
3.4.2	Relaying Basics	68
3.5	Summary	75
	References	76
4	Modeling of Digital Relay and Power System Signals	77
4.1	Introduction	77
4.2	Major Elements of a Digital Relay	77
4.2.1	Data Acquisition Block	78
4.2.2	Phasor Estimation	83
4.3	Library of Modeling Elements	87
4.3.1	Bias Characteristic	87
4.3.2	Basic Measurements	91
4.3.3	Data Acquisition Board	94
4.3.4	Directional Element	99
4.3.5	Differential Equation-Based Impedance Measurement	102
4.3.6	Digital Filter	107
4.3.7	Digital Fourier Transform	112
4.3.8	Orthogonal Components	116
4.3.9	Symmetrical Components	122
4.3.10	Triggering Element	125
4.3.11	Universal Comparator	129
4.3.12	Phase Selection	139
4.3.13	Vector Group Compensator for 2-Winding Transformers	141
4.3.14	Zone Comparator	147

4.4	Interfacing Power System and Relay Models	150
4.4.1	Analytical Generator	150
4.4.2	Fault Signal Generator	152
4.4.3	Example	155
4.4.4	Phasor Generator	156
4.4.5	Spectrum Generator	158
4.4.6	Three-Phase Phasor Generator	161
4.4.7	Parameters	164
4.5	GUI and Analysis Tools	166
4.5.1	Phasor Display	166
4.6	Summary	169
5	Design and Implementation of Relay Communication	
	Schemes and Trip Logic	171
5.1	Introduction	171
5.2	Communication Schemes	171
5.2.1	Introduction	171
5.2.2	Working with Software	171
5.3	Summary	188
6	Design and Implementation of Overcurrent, Pilot, and Distance Protection	189
6.1	Introduction	189
6.2	Line Protection System: Overcurrent Relaying	189
6.2.1	Introduction	189
6.2.2	Theoretical Background	190
6.2.3	Simulation Models	196
6.2.4	Minimizing the False Trip in the Directional Relay	208
6.3	Line Protection System: Differential Relaying	211
6.3.1	Introduction	211
6.3.2	Theoretical Background	211
6.3.3	Simulation Models	216
6.4	Line Protection System: Zone Protection	218
6.4.1	Introduction	218
6.4.2	Simulation Models	221
6.5	Line Protection System: Pilot Protection	229
6.5.1	Introduction	229
6.5.2	Relay Design	230
6.6	Summary	238
	Reference	239
7	Design and Implementation of Transformer and Busbar Differential Protection	241
7.1	Introduction	241
7.2	Transformer Protection Systems	241
7.2.1	Introduction	241

7.2.2	Theoretical Background	242
7.2.3	Simulation Models	243
7.3	Busbar Protection Systems	255
7.3.1	Introduction	255
7.3.2	Theoretical Background	255
7.3.3	Simulation Models	258
7.4	Summary	261
8	Testing of Digital Protective Relays	263
8.1	Introduction	263
8.2	Modeling and Testing Digital Relays	264
8.2.1	Modeling and Testing Overcurrent Relay	264
8.2.2	Modeling and Testing Impedance Relay	275
8.3	Test Using Digital Simulator	281
8.3.1	Digital Simulator-Based Relay Test System	282
8.3.2	System Modeling and Simulation Programs	290
8.4	Closed-Loop and Open-Loop Analysis	296
8.4.1	General Procedures for Performing Tests	296
8.5	Summary	297
	Reference	297

Design, Modeling and Evaluation of Protective Relays
for Power Systems

Kezunovic, M.; Ren, J.; Lotfifard, S.

2016, XXI, 297 p. 304 illus., 184 illus. in color.,

Hardcover

ISBN: 978-3-319-20918-0
