1	Engineering Decisions for Long-Term Performance of Systems. . . .	1
1.1	Introduction	1
1.2	Engineering: A Decision-Making Discipline	1
1.3	Decision Making.	3
1.3.1	The Nature of Engineering Decisions	3
1.3.2	The Decision-Making Process.	4
1.4	Decisions in the Public Interest.	8
1.5	Prediction.	9
1.6	Choosing Preferred Alternatives	10
1.6.1	The Role of Optimization in Engineering Decisions.	10
1.6.2	The Constrained Optimization Problem	11
1.6.3	Multi-Criteria Optimization	12
1.6.4	Incorporating Randomness into the Optimization.	12
1.6.5	Optimization of Performance Over Time	13
1.7	Life-Cycle Modeling	14
1.8	Risk and Engineering Decisions	15
1.8.1	Interpretations and Approaches to Risk	15
1.8.2	Mathematical Definition of Risk	16
1.9	Summary and Conclusions	18
	References	18
2	Reliability of Engineered Systems	21
2.1	Introduction	21
2.2	The Purpose of Reliability Analysis.	21
2.3	Background and a Brief History of Reliability Engineering.	22
2.4	How do Systems Fail?	24
2.5	The Concept of Reliability	25
2.6	Risk and Reliability.	26
2.7	Overview of Reliability Methods.	27

2.8	Traditional Structural Reliability Assessment.	27
2.8.1	Basic Formulation.	27
2.8.2	Generalized Reliability Problem	29
2.8.3	Simulation	31
2.8.4	Approximate Methods	32
2.9	Notation and Reliability Measures for Nonrepairable Systems	33
2.9.1	Lifetime Random Variable and the Reliability Function	34
2.9.2	Expected Lifetime (Mean Time to Failure).	34
2.9.3	Hazard Function: Definition and Interpretation	35
2.9.4	Conditional Remaining Lifetime	37
2.9.5	Commonly Used Lifetime Distributions	38
2.9.6	Modeling Degradation to Predict System Lifetime.	40
2.10	Notation and Reliability Measures for Repairable Systems	42
2.11	Summary and Conclusions	43
	References	44
3	Basics of Stochastic Processes, Point and Marked Point Processes	47
3.1	Introduction	47
3.2	Stochastic Processes.	47
3.2.1	Definition.	48
3.2.2	Overview of the Models Presented in this Chapter	49
3.3	Point Processes and Counting Processes.	50
3.3.1	Simple Point Processes	50
3.3.2	Marked Point Processes	53
3.4	Poisson Process.	54
3.4.1	Inter-event Times and Event Epochs of the Poisson Process	56
3.4.2	Conditional Distribution of the Arrival Times.	58
3.4.3	Nonhomogeneous Poisson Process	59
3.4.4	Compound Poisson Process	60
3.5	Renewal Processes.	61
3.5.1	Definition and Basic Properties.	62
3.5.2	Distribution of $N(t)$	64
3.5.3	The Renewal Function and the Elementary Renewal Theorem	68
3.5.4	Renewal-Type Equations	69
3.5.5	Key Renewal Theorem	72
3.5.6	Alternating Renewal Processes and the Distribution of $T_{N(t)}$	74
3.6	Summary and Conclusions	77
	References	78

4	Degradation: Data Analysis and Analytical Modeling	79
4.1	Introduction	79
4.2	What Is Degradation?	80
4.3	Degradation: Basic Formulation	81
4.4	Degradation Data	83
4.4.1	Purpose of Data Collection	83
4.4.2	Data Collection Challenges	84
4.5	Construction of Models from Field Data	85
4.6	General Regression Model	86
4.7	Regression Analysis	89
4.7.1	Linear Regression	90
4.7.2	Nonlinear Regression	91
4.7.3	Special Case: Parameter Estimation for the Gamma Process	93
4.7.4	Moment Matching Method	94
4.8	Analytical Degradation Models	99
4.8.1	A Brief Literature Review	99
4.8.2	Basic Degradation Paradigms	100
4.9	Progressive Degradation	101
4.9.1	Definition and Examples	101
4.9.2	Models of Progressive Degradation	102
4.9.3	Performance Evaluation	104
4.10	Degradation Caused by Shocks	105
4.10.1	Definition and Examples	105
4.10.2	Models of Shock Degradation	106
4.10.3	Increasing Damage With Time	108
4.11	Combined Degradation Models	109
4.11.1	Progressive and Shock Degradation	109
4.11.2	Damage With Annealing	110
4.12	Summary and Conclusions	111
	References	112
