Part I Theoretical Framework

1 Yet Another Introduction to Self-Organizing Maps	3
1.1 Background	3
1.2 The Basic Algorithm	4
1.3 Stopping Criteria and Convergence Measures	6
1.4 Output Visualization	11
1.5 SOM Variants	13
1.5.1 SOM Batch	13
1.5.2 Topological Structures in SOMs	14
1.5.3 Neural Gas and Growing Neural Gas	15
1.5.4 Topology Representing Networks	15
1.5.5 Self-Organizing Surface	16
1.5.6 Evolving Self-Organizing Map	16
1.5.7 Growing Hierarchical SOM	17
1.6 Putting SOM at Work	19
2 Networks Analysis and Beyond	21
2.1 Introduction	21
2.2 Classical Networks	24
2.3 Lattice Network	25
2.4 Scale-Free Networks	26
2.4.1 Degree Distribution	26
2.4.2 Power-Law Distribution in Real-World Networks	26
2.4.3 Barabasi–Albert Model	27
2.5 The Configuration Model	28
2.6 Small-World Networks	29
2.7 Measuring the Robustness of Networks	30
2.7.1 Average Shortest Path Length	31
2.7.2 Clustering Coefficients	31

2.7.3	Hierarchical Modularity	31
2.7.4	Assortativity	32
2.7.5	Degree Correlation	33
2.8	Centrality Measures	33
3	Elastic Maps	35
3.1	Introduction	35
3.2	A Formal Description	37
3.3	How Elastic Maps Work	40
3.4	Available Algorithm Implementations	44
 Part II Applications		
4	SOM Variants for the Simulation of Market Price Modeling	49
4.1	Introduction	49
4.2	Voronoi Maps	52
4.3	An Application to Financial Markets: Main Settings	59
4.4	Experimental Results.	61
4.5	Conclusions and Outlooks for Future Works	67
5	Elastic Maps to Define the Risk Profile of Financial Investments	69
5.1	Introduction	69
5.1.1	Strategic Asset Allocation	70
5.1.2	Tactical Asset Allocation.	70
5.1.3	Stock Picking	71
5.2	Portfolio Selection Within the Markowitz Framework	72
5.3	Case Study: The General Framework	76
5.4	Stocks Picking with Elastic Maps	76
5.4.1	Maps Visualization	77
5.4.2	Building Securities Portfolios with Elastic Maps.	77
5.5	Selection with Fundamental Analysis	85
5.5.1	Data and Preprocessing	85
5.5.2	The Formation of the Portfolio.	86
5.6	Comparison Between the Methods	90
5.7	Conclusion	92
6	Hubs and Communities of Financial Assets with Enhanced Self-Organizing Maps	93
6.1	Introduction	93
6.2	Value at Risk: An Introductory Guide	95
6.3	Algorithmic Settings	97
6.3.1	Self-Organizing Maps	97
6.3.2	The VaRSOM	98

6.4	Discussion Case	99
6.5	Conclusion	109
	Appendix	110
7	Financial Landscapes of Health Care Providers	115
7.1	Introduction	115
7.2	The Financial Statements of Public Italian Healthcare Providers: A Brief Review	116
7.3	The Methodology: Motivation and Description	118
7.3.1	The Minimum Spanning Tree Filtering Procedure	120
7.3.2	The Planar Maximally Filtered Graph	120
7.3.3	The Directed Bubble Hierarchical Tree	121
7.4	Results Discussion	122
7.4.1	Retrieving Information from Networks	122
7.4.2	Cluster Analysis for the MST Network	126
7.4.3	Cluster Analysis for the PMFG Network	130
7.4.4	Cluster Analysis for the DBHT Network	133
7.5	Conclusion	135
	Appendix	137
8	Using SOM for Mortality Projection	143
8.1	Background	143
8.2	Mortality Trends and Related Issues	144
8.2.1	Actuarial Notations	144
8.2.2	The Lee–Carter Model	146
8.3	Simulation and Results	147
8.3.1	Experimental Settings	147
8.3.2	Discussion	148
8.4	Final Remarks	152
9	Using Local Databases to Support Smart Policy Interventions	155
9.1	Introduction and Theoretical Background	155
9.2	A First Case Study: Companies in the Genovese Area	156
9.2.1	Performance Analysis: The Traditional Approach	157
9.2.2	Applying SOM to the Analysis of Business Performance in the Area of Genova	161
9.3	Conclusion: Findings, Research Limits and Further Works	162
