

Contents

1	Introduction	1
1.1	Motivation and Context	1
1.2	Book Organization	4
	References	5
2	Energy Harvesting Electronic Systems	7
2.1	Available Energy Sources	7
2.1.1	Mechanical Energy	8
2.1.2	Thermal Gradients	11
2.1.3	Radio Frequency Electromagnetic Energy	14
2.1.4	Human Generation	17
2.1.5	Microbial Fuel Cells	20
2.1.6	Light	23
2.2	Comparison of Harvestable Energy Sources	29
2.3	Energy Harvesting-Based Sensor Networks	30
2.3.1	Introduction	30
2.3.2	Energy Neutrality	30
2.3.3	Examples of WSN Powered by Harvested Energy	31
2.4	Conclusions	36
	References	37
3	Photovoltaic Cell Technologies	43
3.1	Introduction	43
3.2	Concepts and Parameters Regarding PV Cells	44
3.2.1	Standard Illumination Conditions	44
3.2.2	Fill Factor	45
3.2.3	Efficiency	46
3.2.4	Peak Watt	46
3.3	Generation of Electric Power in Semiconductor PV Cells	46
3.3.1	Efficiency Limit According to Shockley and Queisser	49

3.4	Types of PV Cells	50
3.4.1	First-Generation PV Cells	50
3.4.2	Second Generation PV Cells	53
3.4.3	Third-Generation PV Cells	55
3.4.4	Comparison of the Different PV Technologies.	58
3.5	Integrated CMOS PV Cell Prototype	58
3.5.1	Electrical Model of a CMOS PV Cell	60
3.5.2	Development and Layout of an Integrated CMOS PV Cell	61
3.5.3	Experimental Results of the Prototyped Integrated PV Cell	64
3.5.4	Conclusions About the Integrated PV Cell	65
3.6	Indoor Light Energy Availability Study	66
3.6.1	Light Power Intensity Measurements	66
3.6.2	Conclusions	69
	References	70
4	Voltage Step-up Circuits.	73
4.1	Types of Voltage Converters	73
4.1.1	Linear Converters	73
4.1.2	Switched Converters	75
4.2	Inductor-Based Converters	75
4.2.1	Voltage Step-up Circuits.	78
4.2.2	Voltage Step-down Circuits	81
4.2.3	Voltage Step-up/Step-down Circuits.	82
4.3	Switched-Capacitor (SC) DC–DC Voltage Converters	86
4.3.1	Voltage Step-up Converter Using the Ladder Topology	89
4.3.2	Voltage Step-up Converter Using the Cockcroft–Walton Topology	91
4.3.3	Voltage Step-up Converter Using the Dickson Charge Pump Topology	92
4.3.4	Voltage Step-up Converter Using the Fibonacci Topology	94
4.3.5	Voltage Step-up Converter Using the Parallel–Series Topology	94
4.3.6	Voltage Step-up Converter Using the Voltage Doubler Topology	95
4.4	Energy Storing Devices	97
4.4.1	Batteries	98
4.4.2	Supercapacitors	100
4.5	Maximum Power Point Tracking (MPPT) Techniques	103
4.5.1	Introduction	103
4.5.2	Quasi-MPPT Techniques	105

4.5.3	True MPPT Techniques	107
4.5.4	Critical Analysis	108
4.6	Conclusions	110
	References	111
5	Proposed Energy Harvesting System	117
5.1	Introduction	117
5.2	SC Voltage Doubler	118
5.2.1	SC Voltage Doubler with Charge Reusing	124
5.3	Phase Controller	131
5.3.1	MPPT Regulation Using the Fractional Open-Circuit Voltage	131
5.3.2	Asynchronous State Machine (ASM) Circuit	132
5.4	Local Supply	142
5.5	Start-up	143
5.5.1	Electrical Structure and Operating Principle	143
5.6	Voltage Limiter Circuit	144
5.6.1	Motivation and Background	144
5.6.2	Voltage Limiter Circuit Architecture	147
5.6.3	Voltage Reference Circuit	147
5.6.4	Differential Voltage Amplifier	148
5.6.5	Stability Analysis	149
5.6.6	Simulated Performance of the Voltage Limiter	151
5.7	Conclusions	153
	References	154
6	Layout of the System	157
6.1	Introduction	157
6.2	SC Voltage Doubler	158
6.2.1	Switches	158
6.2.2	MOSFET Capacitors	159
6.3	Phase Controller	161
6.3.1	Logic Gates	161
6.3.2	Delay Circuits	162
6.3.3	Voltage Divider and Its Respective Decoupling	164
6.3.4	Comparator Circuits	165
6.4	Local Supply	166
6.5	Start-up Circuit	168
6.6	Voltage Limiter Circuit	168
6.6.1	Voltage Reference Circuit	168
6.6.2	Differential Voltage Amplifier	169
6.6.3	Complete Layout of the Voltage Limiter Circuit	170

6.7	Overall Circuit and Pin Assignment	170
6.8	Extracted Layout Simulation	175
6.9	Conclusions	177
	References	177
7	Experimental Evaluation of the Prototype	179
7.1	Experimental Prototype.	179
7.2	Experimental Results	181
7.2.1	Experimental Evaluation of the Start-up Circuit.	181
7.2.2	Experimental Evaluation of the DC–DC Converter	184
7.2.3	Experimental Evaluation of the MPPT Controller	190
7.2.4	Experimental Results Using the PV Cells	192
	Reference	195
8	Conclusions and Future Perspectives.	197
8.1	Summary and Achievements	197
8.2	Future Perspectives	199
	References	201
	Appendix A: Light Power Measuring Device.	203
	Appendix B: Description of the Manufactured PV Cell	207
	Appendix C: Computation of Power in a Circuit with a Switched-Capacitor	213

CMOS Indoor Light Energy Harvesting System for
Wireless Sensing Applications

Ferreira Carvalho, C.M.; Paulino, N.

2016, XIV, 216 p. 145 illus., 74 illus. in color., Hardcover
