

Contents

1	Introduction	1
1.1	Growth of Population and the Energy Outlook	1
1.2	Environmental Impact of Anthropogenic Activities	8
1.3	Sectoral Energy and Exergy Utilization	15
1.4	Sustainability Aspects	18
1.5	Fuels	25
1.6	The Transportation Sector	33
1.7	Concluding Remarks	36
2	Rail Transportation	39
2.1	Introduction	39
2.2	Rail Transportation Overview	40
2.3	Rail Transportation Infrastructure	43
2.4	Rail Transportation Challenges	45
2.5	Potential Solutions for Clean Rail Development	50
2.6	Illustrative Example: Commuter Rail Transit in the Greater Toronto Area	54
2.7	Closing Remarks	56
3	Locomotive Prime Movers	57
3.1	Introduction	57
3.2	Historical Perspective	58
3.3	Classification of Prime Movers	63
3.4	Steam Locomotives	64
3.5	Diesel Locomotives	66
3.6	Diesel-Electric Locomotives	67
3.7	Electric Locomotives	70
3.8	Alternative Prime Movers	72
3.9	Closing Remarks	73

4	Potential Fuel Options	75
4.1	Introduction	75
4.2	Conventional Transportation Fuels	76
4.3	Natural Gas (NG)	77
4.4	Biofuels and Synthetic Hydrocarbon Fuels	79
4.5	Hydrogen	79
4.6	Ammonia	81
4.7	Summary and Comparison of Conventional and Alternative Fuel Options	84
4.8	Closing Remarks	89
5	Clean Rail Initiatives	91
5.1	Introduction	91
5.2	Hydrogen Locomotive Initiatives	92
5.3	Methanol Locomotive Initiatives	103
5.4	Ammonia Locomotive Initiatives	104
5.5	North American Natural Gas Locomotive Initiatives	107
5.6	Other Clean Rail Initiatives	111
5.7	Concluding Remarks	112
6	Integrated Locomotive Systems	115
6.1	Introduction	115
6.2	System 1: Conventional Diesel Locomotive	117
6.3	Technology Options for Dual Fueling and Exhaust Treatment	119
6.4	System 2: Ammonia Co-Fueling	123
6.5	System 3: Ammonia Co-Fueling with Onboard Hydrogen Production (Without N ₂ Separation)	123
6.6	System 4: Ammonia Co-Fueling with Onboard Hydrogen Production (with N ₂ Separation)	126
6.7	System 5: Multistage Heat Recovery with Power Generation	126
6.8	System 6: Integrated Engine Cooling	126
6.9	System 7: Integrated Compressed Nitrogen Gas Storage	129
6.10	System 8: Indirect Engine Cooling	129
6.11	System 9: Integrated Ammonia-Based Cab Cooling System	133
6.12	System 10: Heat Recovery NH ₃ –Rankine Cycle	133
6.13	Closing Remarks	136
7	Locomotive Systems Analyses and Assessment	137
7.1	Introduction	137
7.2	Thermodynamic Aspects	138
7.3	Thermodynamic Power Cycles	144
7.4	Energy and Exergy Analyses of Locomotive Systems	151
7.5	Environmental Impact Assessment	155
7.6	Economic Assessment	160
7.7	Closing Remarks	167

8 Case Studies	169
8.1 Introduction	169
8.2 General Assumptions and the Prime Mover Internal Combustion Engines (ICE) Modeling	170
8.3 Conventional Diesel-Electric Locomotive	171
8.4 Ammonia-Based Alternative Locomotive Case Studies	173
8.5 Integrated Locomotive Systems Comparison	199
8.6 Illustrative Example: GO Transit Commuter Rail in the GTA	208
8.7 Closing Remarks	209
9 Concluding Remarks	211
References	215
Index	221

Clean Rail Transportation Options

Dincer, I.; Hogerwaard, J.; Zamfirescu, C.

2016, XIV, 223 p. 152 illus., 23 illus. in color., Hardcover

ISBN: 978-3-319-21725-3
