

# Contents

<b>1</b>	<b>Introduction</b> . . . . .	1
1.1	What Is an Oscillatory-Base Manipulator? . . . . .	1
1.2	Previous Works and Contents of the Monograph . . . . .	4
<b>2</b>	<b>Problem Definition, Dynamical Model Formulation</b> . . . . .	7
2.1	Introduction . . . . .	7
2.2	Problem Definition . . . . .	7
2.3	Local-Coordinate and Global-Coordinate Problems . . . . .	9
2.4	Dynamical Model Formulation . . . . .	10
2.4.1	Dynamical Model of an OBM . . . . .	10
2.4.2	Base Oscillation Model . . . . .	12
<b>3</b>	<b>Experimental Apparatus and Analysis on Parameter Variation Due to Payload</b> . . . . .	15
3.1	Introduction . . . . .	15
3.2	Experimental OBM . . . . .	15
3.3	Analysis on Parameter Variation Due to Payloads . . . . .	17
<b>4</b>	<b>Motion Control Using an <math>\mathcal{H}_\infty</math>-Control-Based Approach</b> . . . . .	21
4.1	Introduction . . . . .	21
4.2	$\mathcal{H}_\infty$ Control and $\mu$ -Analysis and Synthesis . . . . .	22
4.2.1	Small-Gain Theorem and Linear Fractional Transformations . . . . .	23
4.2.2	$\mathcal{H}_\infty$ Control Standard Problems . . . . .	24
4.2.3	Structured Uncertainties and $\mu$ -Analysis and Synthesis . . . . .	26
4.2.4	TDOF Control System Structure . . . . .	27
4.3	Extended Matrix Polytopes for Model Uncertainty Representation . . . . .	28
4.3.1	Model Uncertainties and Extended Matrix Polytopes . . . . .	28
4.3.2	LFT Representation of an Extended Matrix Polytope . . . . .	30

4.4	Control Design and Analysis . . . . .	33
4.4.1	Nonlinear State Feedback and Virtual Linear Plant. . . . .	34
4.4.2	Extended Matrix-Polytope-Based Model Uncertainty Representation for the Inertia Matrix . . . . .	36
4.4.3	Sensitivity Function Shaping Strategy Using Linear State-Feedback Control . . . . .	41
4.4.4	Generalized Plant for $\mathcal{H}_\infty$ Control Design and Analysis . . . . .	44
4.4.5	$\mathcal{H}_\infty$ Controller Synthesis and Robustness Analysis. . . . .	51
4.5	Conclusions. . . . .	66
<b>5</b>	<b>Simulations and Experiments for the <math>\mathcal{H}_\infty</math>-Control-Based Approach. . . . .</b>	<b>67</b>
5.1	Introduction. . . . .	67
5.2	Simulations and Experiments (Nominal-Case Performance) . . . . .	68
5.2.1	Base Oscillation. . . . .	68
5.2.2	Global Coordinates . . . . .	69
5.2.3	PID Control . . . . .	69
5.2.4	Attitude Control. . . . .	69
5.2.5	Position Control. . . . .	70
5.2.6	Simulation Results . . . . .	71
5.2.7	Influence of Sensor Error . . . . .	80
5.2.8	Experimental Results and Comparison with PID Control. . . . .	83
5.3	Simulations and Experiments (Robust Performance) . . . . .	88
5.3.1	Robust Control Simulations and Experiments . . . . .	88
5.3.2	Results . . . . .	89
5.4	Conclusions. . . . .	94
<b>6</b>	<b>Motion Control Using a Sliding-Mode-Control-Based Approach. . .</b>	<b>97</b>
6.1	Introduction. . . . .	97
6.2	Sliding-Mode Control. . . . .	98
6.3	Sliding-Mode Control via Rotating Sliding Surface with Variable-Gain Integral Control . . . . .	99
6.3.1	Control System Design of SMC-RSSI . . . . .	99
6.3.2	Control System Design Example . . . . .	102
6.4	Stability Analysis of RSSI. . . . .	103
6.5	Simulations . . . . .	108
6.5.1	Simulations in the Nominal Case . . . . .	109
6.5.2	Simulations in the Robust Control Case . . . . .	118
6.6	Conclusions. . . . .	121

<b>7 Base Oscillation Estimation via Multiple <math>\mathcal{H}_\infty</math> Filters</b> . . . . .	123
7.1 Introduction. . . . .	123
7.2 Estimation Algorithm . . . . .	124
7.2.1 FFT-Based Linear State-Equation Model. . . . .	125
7.2.2 Kalman Filtering Algorithm . . . . .	126
7.2.3 $\mathcal{H}_\infty$ Filtering Algorithm . . . . .	127
7.2.4 Method of Selectively Combining Multiple $\mathcal{H}_\infty$ and Kalman Filters. . . . .	128
7.2.5 Integral with Drift Error Compensation. . . . .	129
7.3 Ship Oscillation Motions. . . . .	130
7.3.1 Ocean Wave Spectrum Model . . . . .	130
7.3.2 Ship Dynamical Model . . . . .	130
7.4 Simulations . . . . .	132
7.4.1 Conditions . . . . .	132
7.4.2 Results . . . . .	133
7.5 Conclusions. . . . .	136
<b>References.</b> . . . . .	139
<b>Index</b> . . . . .	145
