

Contents

1	Introduction	1
	References	6
2	Accretional History of Earth	9
2.1	The Accreting Material	9
2.2	Accretional History	13
	References	15
3	Ocean Basin and Continental Evolution	19
	References	24
4	Degassing Processes and Chemistry	25
	References	33
5	The Underlying Chemical Nature of Life	35
	References	39
6	The Miller-Urey Experiment and Prebiotic Chemistry	41
	References	47
7	A Pathway to the First Organism	49
	References	56
8	An Organic Carbon Rich Surface and the Source of Primitive tRNA on Earth	59
	References	64
9	Evolution of the Atmosphere During the Hadean and Archean	65
	References	69
10	The Faint Young Sun Problem	71
	References	75

11 The Origin of Oxygenic Photosynthesis and Its Impact on the Atmosphere	77
11.1 Earliest Photosynthesis	77
11.2 The Geologic Record of Carbon Isotopes in Sedimentary Rocks and the Rise of Oxygen	79
11.3 The Ultimate Source of Oxidation	86
11.4 A More Realistic (and More Complex) Carbon Budget for the Archean	90
References	93
12 What Can We Learn from Other Planets?	95
12.1 Venus	96
12.2 Mars	96
References	105
13 Summary	107
References	108
Index	109

Earth's Early Atmosphere and Oceans, and The Origin
of Life

Shaw, G.H.

2016, X, 113 p. 18 illus., 8 illus. in color., Softcover

ISBN: 978-3-319-21971-4
