

Contents

1	Special Relativity	1
1.1	The Principle of Relativity	1
1.1.1	Galilean Relativity in Classical Mechanics	2
1.1.2	Invariance of Classical Mechanics Under Galilean Transformations	7
1.2	The Speed of Light and Electromagnetism	10
1.3	Lorentz Transformations	17
1.4	Kinematic Consequences of the Lorentz Transformations	23
1.5	Proper Time and Space-Time Diagrams	27
1.5.1	Space-Time and Causality	29
1.6	Composition of Velocities	32
1.6.1	Aberration Revisited	34
1.7	Experimental Tests of Special Relativity	36
1.7.1	References	38
2	Relativistic Dynamics	39
2.1	Relativistic Energy and Momentum	39
2.1.1	Energy and Mass	46
2.1.2	Nuclear Fusion and the Energy of a Star	52
2.2	Space-Time and Four-Vectors	54
2.2.1	Four-Vectors	56
2.2.2	Relativistic Theories and Poincaré Transformations	64
2.2.3	References	64
3	The Equivalence Principle	65
3.1	Inertial and Gravitational Masses	65
3.2	Tidal Forces	71
3.3	The Geometric Analogy	75
3.4	Curvature	78

3.4.1	An Elementary Approach to the Curvature.	80
3.4.2	Parallel Transport	82
3.4.3	Tidal Forces and Space-Time Curvature.	85
3.5	Motion of a Particle in Curved Space-Time	86
3.5.1	The Newtonian Limit	88
3.5.2	Time Intervals in a Gravitational Field.	89
3.5.3	The Einstein Equation	92
3.5.4	References	94
4	The Poincaré Group	95
4.1	Linear Vector Spaces	96
4.1.1	Covariant and Contravariant Components.	100
4.2	Tensors	106
4.3	Tensor Algebra.	109
4.4	Rotations in 3-Dimensions	114
4.5	Groups of Transformations.	118
4.5.1	Lie Algebra of the $SO(3)$ Group.	122
4.6	Principle of Relativity and Covariance of Physical Laws	127
4.7	Minkowski Space-Time and Lorentz Transformations	128
4.7.1	General Form of (Proper) Lorentz Transformations	135
4.7.2	The Poincaré Group	140
4.7.3	References	142
5	Maxwell Equations and Special Relativity	143
5.1	Electromagnetism in Tensor Form.	143
5.2	The Lorentz Force	149
5.3	Behavior of \mathbf{E} and \mathbf{B} Under Lorentz Transformations	150
5.4	The Four-Current and the Conservation of the Electric Charge	153
5.5	The Energy-Momentum Tensor	156
5.6	The Four-Potential	162
5.6.1	The Spin of a Plane Wave.	166
5.6.2	Large Volume Limit	169
5.6.3	References	170
6	Quantization of the Electromagnetic Field	171
6.1	The Electromagnetic Field as an Infinite System of Harmonic Oscillators.	171
6.2	Quantization of the Electromagnetic Field	178
6.3	Spin of the Photon	185
6.3.1	References	186

7	Group Representations and Lie Algebras	187
7.1	Lie Groups.	187
7.2	Representations.	189
7.3	Infinitesimal Transformations and Lie Algebras	197
7.4	Representation of a Group on a Field	199
7.4.1	Invariance of Fields.	204
7.4.2	Infinitesimal Transformations on Fields	207
7.4.3	Application to Non-Relativistic Quantum Mechanics	211
7.4.4	References	213
8	Lagrangian and Hamiltonian Formalism	215
8.1	Dynamical System with a Finite Number of Degrees of Freedom	215
8.1.1	The Action Principle	215
8.1.2	Lagrangian of a Relativistic Particle	220
8.2	Conservation Laws	221
8.2.1	The Noether Theorem for a System of Particles	225
8.3	The Hamiltonian Formalism.	231
8.4	Canonical Transformations and Conserved Quantities	235
8.4.1	Conservation Laws in the Hamiltonian Formalism.	239
8.5	Lagrangian and Hamiltonian Formalism in Field Theories	241
8.5.1	Functional Derivative	242
8.5.2	The Hamilton Principle of Stationary Action	246
8.6	The Action of the Electromagnetic Field	248
8.6.1	The Hamiltonian for an Interacting Charge.	254
8.7	Symmetry and the Noether Theorem	255
8.8	Space-Time Symmetries.	260
8.8.1	Internal Symmetries	267
8.9	Hamiltonian Formalism in Field Theory.	269
8.9.1	Symmetry Generators in Field Theories	273
8.9.2	References	274
9	Quantum Mechanics Formalism	275
9.1	Introduction	275
9.2	Wave Functions, Quantum States and Linear Operators	275
9.3	Unitary Operators	285
9.3.1	Application to Non-Relativistic Quantum Theory	289
9.3.2	The Time Evolution Operator.	296
9.4	Towards a Relativistically Covariant Description.	301
9.4.1	The Momentum Representation	306
9.4.2	Particles and Irreducible Representations of the Poincaré Group	310

9.5	A Note on Lorentz-invariant Normalizations.	313
9.5.1	References	315
10	Relativistic Wave Equations	317
10.1	The Relativistic Wave Equation	317
10.2	The Klein-Gordon Equation	321
10.2.1	Coupling of the Complex Scalar Field $\phi(x)$ to the Electromagnetic Field	329
10.3	The Hamiltonian Formalism for the Free Scalar Field	331
10.4	The Dirac Equation	333
10.4.1	The Wave Equation for Spin 1/2 Particles	334
10.4.2	Conservation of Probability	338
10.4.3	Covariance of the Dirac Equation	339
10.4.4	Infinitesimal Generators and Angular Momentum	341
10.5	Lagrangian and Hamiltonian Formalism.	347
10.6	Plane Wave Solutions to the Dirac Equation	350
10.6.1	Useful Properties of the $u(p, r)$ and $v(p, r)$ Spinors	356
10.6.2	Charge Conjugation	360
10.6.3	Spin Projectors	361
10.7	Dirac Equation in an External Electromagnetic Field	365
10.8	Parity Transformation and Bilinear Forms	369
10.8.1	Bilinear Forms	372
10.8.2	References	374
11	Quantization of Boson and Fermion Fields.	375
11.1	Introduction	375
11.2	Quantization of the Klein Gordon Field	376
11.2.1	Electric Charge and Its Conservation	392
11.3	Transformation Under the Poincaré Group	394
11.3.1	Discrete Transformations	396
11.4	Invariant Commutation Rules and Causality	402
11.4.1	Green's Functions and the Feynman Propagator	406
11.5	Quantization of the Dirac Field	413
11.6	Invariant Commutation Rules for the Dirac Field	421
11.6.1	The Feynman Propagator for Fermions	423
11.6.2	Transformation Properties of the Dirac Quantum Field	425
11.6.3	Discrete Transformations	428
11.7	Covariant Quantization of the Electromagnetic Field	432
11.7.1	Indefinite Metric and Subsidiary Conditions	439
11.7.2	Poincaré Transformations and Discrete Symmetries Group	446
11.8	Quantum Electrodynamics	447
11.8.1	References	452

12	Fields in Interaction	453
12.1	Interaction Processes	453
12.2	Kinematics of Interaction Processes	455
12.2.1	Decay Processes	457
12.2.2	Scattering Processes	461
12.3	Dynamics of Interaction Processes	464
12.3.1	Interaction Representation	465
12.3.2	The Scattering Matrix	467
12.3.3	Two-Particle Phase-Space Element	478
12.3.4	The Optical Theorem	480
12.3.5	Natural Units	482
12.3.6	The Wick's Theorem	484
12.4	Quantum Electrodynamics and Feynman Rules	490
12.4.1	External Electromagnetic Field	496
12.5	Amplitudes in the Momentum Representation	498
12.5.1	Möller Scattering	498
12.5.2	A Comment on the Role of Virtual Photons	503
12.5.3	Bhabha and Electron-Muon Scattering	504
12.5.4	Compton Scattering and Feynman Rules	509
12.5.5	Gauge Invariance of Amplitudes	512
12.5.6	Interaction with an External Field	515
12.6	Cross Sections	518
12.6.1	The Bhabha Scattering	518
12.6.2	The Compton Scattering	522
12.7	Divergent Diagrams	525
12.8	A Pedagogical Introduction to Renormalization	531
12.8.1	Power Counting and Renormalizability	535
12.8.2	The Electron Self-Energy Part	540
12.8.3	The Photon Self-Energy	545
12.8.4	The Vertex Part	550
12.8.5	One-Loop Renormalized Lagrangian	555
12.8.6	The Electron Anomalous Magnetic Moment	556
12.8.7	References	559
	Appendix A: The Eotvös' Experiment	561
	Appendix B: The Newtonian Limit of the Geodesic Equation	563
	Appendix C: The Twin Paradox	565
	Appendix D: Jacobi Identity for Poisson Brackets	569
	Appendix E: Induced Representations and Little Groups	571

Appendix F: SU(2) and SO(3)	577
Appendix G: Gamma Matrix Identities.	581
Appendix H: Simultaneity and Rigid Bodies	587
References.	591
Index	593

From Special Relativity to Feynman Diagrams

A Course in Theoretical Particle Physics for Beginners

D'Auria, R.; Trigiante, M.

2016, XVI, 601 p., Hardcover

ISBN: 978-3-319-22013-0
