Part I Synthetic and Biophysical Studies on the Tridachiahdropyrone Family of Natural Products

1	Introduction	3
1.1	Tridachiahdropyrone and Related Natural Products	3
1.1.1	γ -Pyrone-Containing Polypropionates from Sacoglossan Molluscs	3
1.1.2	Biosynthesis of γ -Pyrone-Containing Polypropionate Natural Products	4
1.1.3	Biomimetic Electrocyclisations in Natural Product Synthesis	7
1.1.4	Tridachiahdropyrone: Biosynthetic Hypothesis	12
1.2	UV Light-Induced Cell Damage	14
1.2.1	Direct Damage to DNA	14
1.2.2	Cell Damage via Reactive Oxygen Species	16
1.2.3	Prevention of Oxidative Cell Damage: Low Molecular Mass Antioxidants	19
1.3	Tridachiahdropyrone: Previous Work	20
1.4	Aims of This Work	23
	References	24
2	Synthesis of the Tridachiahdropyrones and their Biomimetic Precursors	25
2.1	Revised Synthetic Route	25
2.2	Synthesis of the Boronic Ester Coupling Fragment	25
2.3	Synthesis of the Vinyl Iodopyrone Fragments	26
2.4	Suzuki Coupling: Synthesis of the Biomimetic Precursors	32
2.5	Biomimetic Synthesis of the Tridachiahdropyrone Family	35
	References	37

3 Interactions of the Tridachiahypopyrones with Model Membrane Systems: Biophysical Studies	39
3.1 Liposomes as Experimental Membrane Models	39
3.2 Behaviour of the Polyene Pyrones in Solution:	
Critical Micelle Concentrations	41
3.3 Exploring Molecular Interactions with Membranes:	
Exploiting the Membrane Dipole Potential	45
3.3.1 Membrane Potentials	45
3.3.2 Measurement of the Membrane Dipole Potential:	
Di-8-ANEPPS	46
3.3.3 Effect of Molecular Interactions on the Membrane	
Dipole Potential: Difference Spectra	46
3.3.4 Concentration Dependence of the Membrane	
Dipole Potential: Ratiometric Fluorescence Measurements	48
3.3.5 Uptake of Di-8-ANEPPS by Micelles:	
Effects on Fluorescence	49
3.3.6 Fitting the Binding Profiles: Characterising the Interactions	50
3.4 Electrocyclisations Using PLVs as Chiral Reaction Media	55
References	58
4 Investigations into the Photoprotective and Antioxidant Properties of the Tridachiahypopyrones	59
4.1 Thiobarbituric Acid Reactive Substances (TBARS) Assay	59
4.2 2,2-Diphenyl-1-Picrahydrazyl (DPPH) Assay	64
4.3 Ferric Reducing Antioxidant Power (FRAP) Assay	66
4.4 Antioxidant Properties: Mechanistic Considerations	67
4.5 Synthetic Studies: Peroxidation	
of Tridachiahypopyrone Precursors	69
References	72
5 Summary and Conclusions	73
6 Experimental	77
6.1 Organic Synthesis	77
6.1.1 Experimental Techniques	77
6.1.2 Analysis	77
6.1.3 Experimental Procedures and Characterisation Data	78
6.1.4 Electrocyclisation in Membranes: General Procedure	93
6.1.5 Analysis of the Separated Enantiomers	
of Tridachiahypopyrone	93
6.2 Biophysical Techniques	94
6.2.1 Materials and Methods	94
6.2.2 90° Light Scattering: Critical Micelle	
Concentration Determination	95
6.2.3 Liposome Preparation	95

6.2.4	Fluorescent Labelling of PLVs with Di-8-ANEPPS	96
6.2.5	Characterisation of Di-8-ANEPPS-Labelled PLVs	96
6.2.6	Fluorescence Difference Spectra	97
6.2.7	Titration of Ligands into Di-8-ANEPPS-Labelled PLVs: Dual-Wavelength Ratiometric Fluorescence Time Course Measurements	98
6.2.8	Analysis of Titration Data: Generation of Binding Profiles. . .	98
6.3	Assay Procedures	99
6.3.1	Materials and Methods	99
6.3.2	Thiobarbituric Acid Reactive Substances (TBARS) Assay . .	99
6.3.3	2,2-Diphenyl-1-Picrahydrazyl (DPPH) Assay	100
6.3.4	Ferric Reducing Antioxidant Power (FRAP) Assay	100
	References	101

Part II Synthesis of Alkenyl Nitriles by the Palladium-Catalysed Cyanation of Vinyl Halides with Acetone Cyanohydrin

7	Synthesis of Alkenyl Nitriles by the Palladium-Catalysed Cyanation of Vinyl Halides with Acetone Cyanohydrin	105
7.1	Introduction	105
7.1.1	Prevalence and Utility of Alkenyl Nitriles	105
7.1.2	Transition Metal-Catalysed Cyanation of Vinyl Halides: Existing Methodology	106
7.1.3	Use of Acetone Cyanohydrin in Cyanation Methodology . .	108
7.1.4	Aims of This Work	110
7.2	Results and Discussion	110
7.2.1	Optimisation of the Reaction Conditions	110
7.2.2	Substrate Scope	116
7.3	Summary and Conclusions	118
7.4	Experimental	119
7.4.1	Experimental Techniques	119
7.4.2	Analysis	119
7.4.3	Preparation of Substrates	120
7.4.4	General Cyanation Procedure	124
7.4.5	Characterisation of Cyanation Products	125
	References	129

Appendix A: Molecular Modelling: Equilibrium Geometries	131
