

Contents

1	Conception of Arc Spraying Method	1
1.1	Essence of the Method	2
1.2	Research Plan of Arc Spraying	16
	References	19
2	Input Parameters of the Coating Process	23
2.1	Stages of the Arc Spraying Process	23
2.2	Temperatures, Velocities, Gas Atmosphere Components—Initial Values	24
2.3	Metal Heating and Melting on the End Face of Electrode	28
2.4	The Formation of Droplets of Liquid Metal	37
2.5	Description of the Geometry and the Velocity of Two-Phase Flow	55
2.6	Temperature Calculation of the Two-Phase Flow	74
2.7	Chemical Composition of the Gas Jet	87
2.8	Kinetic of Interaction of the Sprayed Metal with Oxygen	98
	2.8.1 Physical Pattern of the Process	98
	2.8.2 Principles of Thermodynamic and Kinetic Calculations of Oxygen Delivery	101
	2.8.3 Example Calculation of Oxygen Delivery to a Drop	110
	References	125
3	Coatings Properties and External Influences	129
3.1	Coatings Formation	129
3.2	Residual Stresses	146
3.3	Structure of Arc Sprayed Coatings	158
	3.3.1 Steel Coatings	158
	3.3.2 Babbit Coatings	170

3.4	Coating Strength	172
3.4.1	Adhesive Interaction	174
3.4.2	Cohesion Interaction	177
3.4.3	Methods for the Evaluation of Adhesion	178
3.5	External Influences on the Material During Spraying.	187
3.5.1	Effects on the Substrate.	187
3.5.2	Influence on the Sprayed Material	191
	References	197
4	Output Coatings Parameters.	201
4.1	Wear Resistance	201
4.1.1	The Concept of Wear	201
4.1.2	Abrasive Wear	205
4.1.3	Adhesion and Fatigue Wear.	213
4.1.4	Erosive Wear	217
4.2	Corrosion Resistance of Coatings	221
4.2.1	The Concept of Corrosion	221
4.2.2	Chemical Corrosion	222
4.2.3	Electrochemical Corrosion	240
4.2.4	Influence of Technological Conditions on the Quality of Anticorrosive Coatings.	247
	References	254

Fundamentals of Arc Spraying

Physical and Chemical Regularities

Boronenkov, V.; Korobov, Y.

2016, XI, 256 p. 180 illus., 33 illus. in color., Hardcover

ISBN: 978-3-319-22305-6
