

# Contents

<b>1 Basic Concepts</b>	1
1.1 Slater Determinants and Slater–Condon Rules	1
1.2 Generation of Many Electron Spin Functions	5
1.2.1 Many Electron Spin Functions by Projection	9
1.2.2 Spin Functions by Diagonalization	10
1.2.3 Genealogical Approach	12
1.2.4 Final Remarks	20
1.3 Perturbation Theory	21
1.3.1 Rayleigh–Schrödinger Perturbation Theory	21
1.3.2 Møller–Plesset Perturbation Theory	25
1.3.3 Quasi-Degenerate Perturbation Theory	27
1.4 Effective Hamiltonian Theory	28
Problems	31
References	32
<b>2 One Magnetic Center</b>	33
2.1 Atomic Magnetic Moments	33
2.2 The Eigenstates of Many-Electron Atoms	34
2.3 Further Removal of the Degeneracy of the $N$ -electron States	39
2.3.1 Zero Field Splitting	39
2.3.2 Splitting in an External Magnetic Field	43
2.3.3 Combining ZFS and the External Magnetic Field	52
Problems	54
References	57
<b>3 Two (or More) Magnetic Centers</b>	59
3.1 Localized Versus Delocalized Description of the Two-Electron/Two-Orbital Problem	59
3.2 Model Spin Hamiltonians for Isotropic Interactions	68
3.2.1 Heisenberg Hamiltonian	69
3.2.2 Ising Hamiltonian	74

3.2.3	Comparing the Heisenberg and Ising Hamiltonians. . . . .	76
3.3	From Micro to Macro: The Bottom-Up Approach . . . . .	77
3.3.1	Monte Carlo Simulations, Renormalization Group Theory . . . . .	81
3.4	Complex Interactions . . . . .	87
3.4.1	Biquadratic Exchange. . . . .	88
3.4.2	Four-Center Interactions . . . . .	90
3.4.3	Anisotropic Exchange. . . . .	95
	Problems . . . . .	101
	References . . . . .	102
<b>4</b>	<b>From Orbital Models to Accurate Predictions . . . . .</b>	<b>105</b>
4.1	Qualitative Valence-Only Models. . . . .	105
4.1.1	The Kahn–Briat Model. . . . .	105
4.1.2	The Hay–Thibeault–Hoffmann Model. . . . .	108
4.1.3	McConnell’s Model . . . . .	110
4.2	Magnetostructural Correlations. . . . .	113
4.3	Accurate Computational Models. . . . .	120
4.3.1	The Reference Wave Function and Excited Determinants . . . . .	121
4.3.2	Difference Dedicated Configuration Interaction . . . . .	123
4.3.3	Multireference Perturbation Theory . . . . .	127
4.3.4	Spin Unrestricted Methods . . . . .	131
4.3.5	Alternatives to the Broken Symmetry Approach. . . . .	136
	Problems . . . . .	138
	References . . . . .	139
<b>5</b>	<b>Towards a Quantitative Understanding . . . . .</b>	<b>141</b>
5.1	Decomposition of the Magnetic Coupling . . . . .	141
5.1.1	Valence Mechanisms . . . . .	142
5.1.2	Beyond the Valence Space . . . . .	148
5.1.3	Decomposition with MRPT2 . . . . .	151
5.2	Mapping Back on a Valence-Only Model . . . . .	152
5.3	Analysis with Single Determinant Methods . . . . .	157
5.4	Analysis of Complex Interactions. . . . .	159
5.4.1	Decomposition of the Biquadratic Exchange . . . . .	159
5.4.2	Decomposition of the Four-Center Interactions . . . . .	166
5.4.3	Complex Interactions with Single Determinant Approaches. . . . .	168
	Problems . . . . .	174
	References . . . . .	175

<b>6 Magnetism and Conduction</b> . . . . .	177
6.1 Electron Hopping . . . . .	177
6.2 Double Exchange . . . . .	182
6.3 A Quantum Chemical Approach to Magnetic Interactions in the Solid State . . . . .	189
6.3.1 Embedded Cluster Approach . . . . .	190
6.3.2 Periodic Calculations . . . . .	193
6.4 Goodenough–Kanamori Rules . . . . .	197
6.5 Spin Waves for Ferromagnets . . . . .	204
Problems . . . . .	211
References . . . . .	212
<b>Appendix A: Effect of the <math>\hat{I}</math> Operator and the Matrix Elements of the <math>p</math> and <math>d</math> Orbitals</b> . . . . .	213
<b>Appendix B: Effect of the <math>\hat{S}</math> Operator and the Matrix Elements for <math>\frac{1}{2} \leq S \leq \frac{5}{2}</math></b> . . . . .	215
<b>Appendix C: Matrix Representation of the ZFS Model Hamiltonian</b> . . . . .	217
<b>Appendix D: Analytical Expressions for <math>\chi(T)</math></b> . . . . .	219
