

Contents

1	Fundamentals and Methodologies	1
1.1	Introduction	1
1.2	Microscale Effects on Heat and Fluid Flow	4
1.3	Generalized Integral Transform Technique (GITT)	11
1.3.1	Total and Partial Transformation Schemes	12
1.3.2	The UNIT Algorithm	20
1.3.3	Single Domain Formulation	24
1.3.4	Eigenvalue Problem Solution	27
2	Heat and Fluid Flow in Single Microchannels	31
2.1	Transient Slip Flow in Microchannels	31
2.2	Steady, Transient, and Periodic Convection with Slip Flow	36
2.3	Convection in Electroosmotic Flow	48
2.4	Inverse Problem Analysis for Convection in Slip Flow	59
2.5	Microchannels with Corrugated Walls	75
2.5.1	Flow Analysis via Full Navier–Stokes Equations	76
2.5.2	Heat Transfer Analysis with Approximate Velocity Profile	86
2.6	Conjugated Heat Transfer in Microchannels	105
2.6.1	Parallel-Plates Channel	105
2.6.2	Rectangular Channel	112
2.7	Microchannels with Arbitrary Cross Section	124
2.7.1	Flow Problem	125
2.7.2	Heat Transfer Problem	127
2.7.3	Test Cases	129
3	Heat and Fluid Flow in Microsystems	139
3.1	Micro-heat Spreaders	139
3.1.1	Experimental Apparatus and Procedure	140
3.1.2	Mathematical Formulation and Solution	141
3.1.3	Results and Discussion	143

3.2	Micro-heat Exchangers	149
3.2.1	Experimental Apparatus and Procedure	149
3.2.2	Mathematical Formulation and Solution	152
3.2.3	Results and Discussion	153
	Bibliography	157

Analytical Heat and Fluid Flow in Microchannels and
Microsystems

Cotta, R.M.; Knupp, D.C.; Naveira-Cotta, C.P.

2016, XII, 164 p., Hardcover

ISBN: 978-3-319-23311-6
