Contents

Introduction: The Most Important Topological Spaces 1
Lecture 1. Classical Spaces 1
Lecture 2. Basic Operations over Topological Spaces 16
Chapter 1. Homotopy 25
Lecture 3. Homotopy and Homotopy Equivalence 25
Lecture 4. Natural Group Structures in the Sets $\pi(X, Y)$ 33
Lecture 5. CW Complexes 38
Lecture 6. The Fundamental Group and Coverings 60
Lecture 7. Van Kampen's Theorem and Fundamental Groups of CW Complexes 79
Lecture 8. Homotopy Groups 93
Lecture 9. Fibrations 104
Lecture 10. The Suspension Theorem and Homotopy Groups of Spheres 121
Lecture 11. Homotopy Groups and CW Complexes 129
Chapter 2. Homology 143
Lecture 12. Main Definitions and Constructions 143
Lecture 13. Homology of CW Complexes 158
Lecture 14. Homology and Homotopy Groups 178
Lecture 15. Homology with Coefficients and Cohomology 183
Lecture 16. Multiplications 203
Lecture 17. Homology and Manifolds 215
Lecture 18. The Obstruction Theory 253
Lecture 19. Vector Bundles and Their Characteristic Classes 270
Chapter 3. Spectral Sequences of Fibrations 305
Lecture 20. An Algebraic Introduction 305
Lecture 21. Spectral Sequences of a Filtered Topological Space 321
Lecture 22. Spectral Sequences of Fibrations: Definitions and Basic Properties 324
Lecture 23. Additional Properties of Spectral Sequences of Fibrations 336

Lecture 24. A Multiplicative Structure in a Cohomological Spectral Sequence 349
Lecture 25. Killing Spaces Method for Computing Homotopy Groups 364
Lecture 26. Rational Cohomology of $K(\pi, n)$ and Ranks of Homotopy Groups 367
Lecture 27. Odd Components of Homotopy Groups 379
Chapter 4. Cohomology Operations 389
Lecture 28. General Theory 389
Lecture 29. Steenrod Squares 395
Lecture 30. The Steenrod Algebra 401
Lecture 31. Applications of Steenrod Squares 414
Chapter 5. The Adams Spectral Sequence 429
Lecture 32. General Idea 429
Lecture 33. The Necessary Algebraic Material 434
Lecture 34. The Construction of the Adams Spectral Sequence 444
Lecture 35. Multiplicative Structures 463
Lecture 36. An Application of the Adams Spectral Sequence to Stable Homotopy Groups of Spheres 472
Lecture 37. Partial Cohomology Operation 487
Chapter 6. *K*-Theory and Other Extraordinary Cohomology Theories 495
Lecture 38. General Theory 495
Lecture 39. Calculating K-Functor: Atiyah–Hirzebruch Spectral Sequence 516
Lecture 40. The Adams Operations 525
Lecture 41. J-functor 533
Lecture 42. The Riemann–Roch Theorem 551
Lecture 43. The Atiyah–Singer Formula: A Sketch 577
Lecture 44. Cobordisms 584
