<b>1</b>	<b>Introduction to the Microsatellite Platform</b>	<b>1</b>
	Jens Eickhoff	
1.1	The University Small Satellite Program	2
1.2	Satellite Orbit	4
1.3	Mechanical Design and Launcher Interface	4
1.4	Technology and Payloads	4
1.5	Platform Re-usability	7
1.6	Platform Redundancy Concept	8
1.7	Power Subsystem and Electrical Block Diagram	10
	1.7.1 Solar Panels	10
	1.7.2 Battery	10
	1.7.3 The Power Control and Distribution Unit	11
1.8	Core Data Handling Subsystem	12
1.9	FLP Payload Control Computer	13
1.10	Attitude Control Subsystem	14
	1.10.1 Sensors and Actuators	15
	1.10.2 Satellite System Modes	17
1.11	Reaction Control Subsystem	19
1.12	Communication Subsystem	20
1.13	Thermal Control Subsystem	21
1.14	Satellite Deorbiting at End of Life	22
1.15	Possible Mechanical Platform Configurations	23
<b>2</b>	<b>The FLP Platform Operability</b>	<b>25</b>
	Kai-Sören Klemich and Jens Eickhoff	
2.1	Spacecraft Configuration Handling Concept	26
	2.1.1 System Mode Changes Using the OBSW	
	Object Hierarchy	26
	2.1.2 Overview on the FLP Operational Modes	27
	2.1.3 Launch Mode	29
	2.1.4 Boot Mode	30

2.1.5	Detumble/Safe Mode . . . . .	30
2.1.6	Idle Mode . . . . .	31
2.1.7	Coarse Nadir Pointing Mode. . . . .	32
2.1.8	Operational Modes—Ground Contact. . . . .	32
2.1.9	Operational Modes—Payload Operations . . . . .	33
2.1.10	None Mode . . . . .	33
2.1.11	Open Mode Concept . . . . .	34
2.1.12	Mode Tables and Sequences Control Service . . . . .	34
2.1.13	Spacecraft Equipment Operation Versus Modes. . . . .	47
2.2	Spacecraft Telecommand and Telemetry Structure. . . . .	51
2.2.1	CCSDS Protocol Addressing. . . . .	51
2.2.2	Spacecraft ID . . . . .	54
2.2.3	System Authentication . . . . .	55
2.3	Application Process ID Definitions (APIDs). . . . .	55
2.4	PUS Tailoring Concept . . . . .	56
2.4.1	PUS-Service 1—Telecommand Verification . . . . .	57
2.4.2	PUS-Service 2—Device Command Distribution . . . . .	57
2.4.3	PUS-Service 3—Housekeeping and Diagnostic Reporting . . . . .	59
2.4.4	PUS-Service 4—Parameter Statistics Reporting . . . . .	60
2.4.5	PUS-Service 5—Event Reporting . . . . .	60
2.4.6	PUS-Service 6—Memory Management Service. . . . .	61
2.4.7	PUS-Service 8—Function Management Service. . . . .	62
2.4.8	PUS-Service 9—Time Management Service . . . . .	62
2.4.9	PUS-Service 11—On-board Operations Scheduling Service. . . . .	63
2.4.10	PUS-Service 12—On-board Monitoring Service . . . . .	64
2.4.11	PUS-Service 15—On-board Storage and Retrieval Service. . . . .	65
2.4.12	PUS-Service 17—Test Service . . . . .	65
2.4.13	PUS-Service 18—On-board Control Procedures Service. . . . .	66
2.4.14	PUS-Service 19—Event-Action Service . . . . .	66
2.4.15	PUS Service 200—Mode Control Service. . . . .	66
2.4.16	PUS-Service 201—Health Flag Control Service. . . . .	67
2.4.17	PUS-Service 202—Mode Tables and Sequences Control Service. . . . .	67
2.4.18	PUS-Service 203—Payload Control Service . . . . .	68
2.5	Spacecraft Commandability and Observability. . . . .	69
2.6	Spacecraft On-board Time Management. . . . .	70

<b>3</b>	<b>Data Handling and Control Concept . . . . .</b>	<b>73</b>
	Ulrich Mohr, Bastian Bätz and Jens Eickhoff	
3.1	Onboard Software Architecture . . . . .	74
3.1.1	OBSW Hierarchy Concept . . . . .	75
3.1.2	Command/Reply Flow Through the OBSW . . . . .	78
3.2	OBSW Object Types . . . . .	80
3.2.1	Service Objects . . . . .	81
3.2.2	Device Handler Objects . . . . .	81
3.2.3	Assembly Objects . . . . .	86
3.2.4	Controller Objects . . . . .	87
3.2.5	Subsystem Objects. . . . .	89
3.2.6	Top-Level System Object . . . . .	89
3.2.7	Object Execution . . . . .	89
3.2.8	OBSW Object-IDs and PRIDs . . . . .	90
3.3	Observability Functions Provided by the OBSW . . . . .	93
3.3.1	Command Verification . . . . .	93
3.3.2	Cyclic HK . . . . .	93
3.3.3	Event Messages. . . . .	94
3.4	FLP Software Dynamic Architecture . . . . .	95
3.4.1	Process/Task Management . . . . .	96
3.4.2	Object Tasks. . . . .	97
3.4.3	Polling Sequence Table . . . . .	98
3.4.4	Dynamic Scheduling . . . . .	100
3.4.5	Modes versus Actions . . . . .	100
3.5	Onboard Software Death Report . . . . .	102
<b>4</b>	<b>Core Data Handling Subsystem . . . . .</b>	<b>103</b>
	Jens Eickhoff, Rouven Witt and Bastian Bätz	
4.1	On-Board Data Handling Subsystem . . . . .	104
4.2	Combined Data and Power Management Infrastructure . . . . .	104
4.2.1	The PCDU as Analog RIU . . . . .	106
4.2.2	A Combined-Controller for Power and DHS FDIR . . . . .	106
4.2.3	Completeness of System Architecture. . . . .	107
4.3	Data Management . . . . .	109
4.3.1	PROM Data . . . . .	110
4.3.2	I/O-Board Persistent RAM . . . . .	111
4.3.3	OBC RAM and PROM Direct Access . . . . .	111
4.4	System Boot at Launcher Separation . . . . .	112
4.5	OBSW Controlled Functions . . . . .	114
4.6	Core DHS Subsystem Control . . . . .	115
4.6.1	I/O-Board Handler. . . . .	115
4.6.2	I/O-Board Assembly . . . . .	117
4.6.3	Core DHS Controller . . . . .	118
4.6.4	Core DHS Mode Transitions and Telemetry . . . . .	119

<b>5</b>	<b>Power Supply Subsystem</b> . . . . .	121
	Kai-Sören Klemich and Bastian Bätz	
5.1	Subsystem Overview . . . . .	122
5.2	Solar Panels . . . . .	123
5.3	Solar Array Deployment Mechanism . . . . .	124
5.4	Battery. . . . .	127
	5.4.1 General Monitoring . . . . .	129
	5.4.2 Battery SoC Estimation . . . . .	131
	5.4.3 Operating the Battery. . . . .	133
5.5	Power Control and Distribution Unit . . . . .	134
	5.5.1 Power Control and Distribution Functions . . . . .	135
	5.5.2 PCDU Design Overview . . . . .	139
	5.5.3 PCDU Boot-up Sequence and PCDU Modes . . . . .	141
	5.5.4 Specific PCDU Functions in the CDPI Architecture . . . . .	143
	5.5.5 Diverse PCDU Functions . . . . .	144
5.6	Power Subsystem Control . . . . .	146
	5.6.1 PCDU Device Handler. . . . .	148
	5.6.2 PSS Controller . . . . .	148
	5.6.3 Power Subsystem Mode Transitions and Telemetry. . . . .	156
	5.6.4 Power Subsystem Object-IDs, Controller Variables and Limits . . . . .	159
	5.6.5 Power Subsystem Variables, Limits, and Parameters . . . . .	160
<b>6</b>	<b>Platform Communication Subsystem</b> . . . . .	173
	Jens Eickhoff and Kai-Sören Klemich	
6.1	TTC Subsystem Overview . . . . .	174
6.2	Signal Acquisition Procedure . . . . .	177
6.3	TTC Subsystem Control. . . . .	178
	6.3.1 TTC Subsystem Device Handlers . . . . .	179
	6.3.2 TTC Subsystem Assemblies . . . . .	182
	6.3.3 TTC Subsystem Object-IDs . . . . .	183
	6.3.4 TTC Controller . . . . .	184
	6.3.5 TTC Subsystem Mode Transitions and Telemetry. . . . .	186
<b>7</b>	<b>Attitude Control Subsystem.</b> . . . . .	195
	Oliver Zeile, Ulrich Mohr, Bastian Bätz and Nico Bucher	
7.1	Subsystem Overview . . . . .	196
7.2	Mission Objectives and ACS Subsystem Modes . . . . .	197
7.3	Magnetometers . . . . .	197
7.4	Sun Sensor Unit . . . . .	198
7.5	GPS Receiver System . . . . .	200

7.6	Fiberoptic Gyroscopes . . . . .	201
7.7	Star Tracker . . . . .	203
7.8	Reaction Wheels . . . . .	204
7.9	Magnetotorquers . . . . .	205
7.10	Extensions for FLP Generation 2 . . . . .	206
7.11	ACS Subsystem Control . . . . .	208
7.11.1	ACS Subsystem Modes . . . . .	209
7.11.2	ACS Device Handlers . . . . .	209
7.11.3	ACS Assemblies . . . . .	221
7.11.4	ACS Controller . . . . .	225
7.11.5	ACS Subsystem Mode Transitions and Telemetry. . .	231
<b>8</b>	<b>Thermal Control Subsystem . . . . .</b>	<b>245</b>
	Fabian Steinmetz and Sebastian Keil	
8.1	Thermal Subsystem Overview. . . . .	246
8.2	Sensors, Calibration, Limits . . . . .	254
8.3	TCS Subsystem Control. . . . .	256
8.3.1	Initial Control Concept. . . . .	258
8.3.2	TCS Controller . . . . .	260
8.3.3	TCS Subsystem Mode Transitions and Telemetry. . .	269
<b>9</b>	<b>Payload Control Subsystem . . . . .</b>	<b>271</b>
	Philipp Hagel, Paul Walker and Jens Eickhoff	
9.1	Aspects of Payload Control and Data Handling. . . . .	272
9.1.1	Payload Control via the Platform OBC. . . . .	273
9.1.2	Payload Control via Dedicated PMC . . . . .	273
9.2	Payload Control on the First FLP Based Satellite . . . . .	275
9.2.1	PMC Hardware . . . . .	275
9.2.2	PMC Mainboard Elements and Function . . . . .	277
9.2.3	PMC Software . . . . .	278
9.3	Payload Control in Network-Centric Architectures. . . . .	282
9.3.1	FLP Generation 2 SpaceWire Network. . . . .	283
9.3.2	FLP Generation 2 Target Architecture . . . . .	287
<b>10</b>	<b>Failure Detection, Isolation and Recovery Concept. . . . .</b>	<b>291</b>
	Rouven Witt and Jens Eickhoff	
10.1	General Principles . . . . .	292
10.1.1	Applying ECSS Terminology . . . . .	292
10.1.2	FDIR Requirements . . . . .	293
10.1.3	Fault Tolerance Through Redundancy . . . . .	295
10.1.4	Redundancy on FLP . . . . .	297
10.1.5	Three Stages of Device Failure Detection. . . . .	298
10.1.6	System Failure Detection . . . . .	298
10.1.7	Event Utilization . . . . .	299

	10.1.8	Event Flow . . . . .	300
	10.1.9	Failure Event Management . . . . .	302
10.2		Core DHS FDIR . . . . .	304
	10.2.1	Component Functions During Failure Handling . . .	305
	10.2.2	PCDU as Reconfiguration Unit . . . . .	307
	10.2.3	Reconfiguration Sequence . . . . .	310
	10.2.4	HPC-Based Spacecraft Reconfiguration . . . . .	318
	10.2.5	Software Watchdog . . . . .	321
	10.2.6	Software (Re-) Boot . . . . .	323
	10.2.7	Data Transmission Between I/O-Boards . . . . .	326
	10.2.8	PCDU Automated Fault Management . . . . .	327
	10.2.9	IO- and CCSDS-Board SpaceWire FDIR . . . . .	327
	10.2.10	Memory EDAC/TM Store Integrity . . . . .	327
	10.2.11	Spacecraft State and Configuration Vector . . . . .	328
	10.2.12	SW Watchdog for FLP Generation 2 . . . . .	329
	10.2.13	Events in the Core DHS FDIR . . . . .	329
10.3		Power FDIR . . . . .	332
	10.3.1	Battery State-of-Charge Surveillance . . . . .	333
	10.3.2	Voltage Levels and Fuse Currents . . . . .	336
	10.3.3	Failure Handling for PSS Devices . . . . .	338
	10.3.4	System Reactions . . . . .	348
	10.3.5	PSS FDIR Events . . . . .	349
10.4		Equipment FDIR . . . . .	353
	10.4.1	Device Failure Versus I/O-Board Failure Symptoms . . . . .	353
	10.4.2	Device Failure Isolation and Recovery . . . . .	356
	10.4.3	Failure and Boot Counter Evaluation . . . . .	359
	10.4.4	Device Handler FDIR Events . . . . .	361
10.5		TTC FDIR . . . . .	361
	10.5.1	Receiver Failure Handling . . . . .	361
	10.5.2	Transmitter Failure Handling . . . . .	364
	10.5.3	Transceiver Health Monitoring . . . . .	364
	10.5.4	CCSDS-Board FDIR . . . . .	365
	10.5.5	Communication System Events . . . . .	366
10.6		ACS FDIR . . . . .	366
	10.6.1	Magnetometer Failure Detection . . . . .	367
	10.6.2	GPS Sensor Failure Detection . . . . .	368
	10.6.3	Star Tracker System Failure Detection . . . . .	372
	10.6.4	Sun Sensor Failure Detection . . . . .	374
	10.6.5	Fiber Optic Gyro Failure Detection . . . . .	375
	10.6.6	Magnetotorquer Failure Detection . . . . .	377
	10.6.7	Reaction Wheel Failure Detection . . . . .	379
	10.6.8	Attitude Control System Failure Detection . . . . .	381
	10.6.9	ACS Autonomy . . . . .	384
	10.6.10	ACS Events . . . . .	384

10.7	TCS FDIR . . . . .	389
10.7.1	TCS Failure Detection and Isolation . . . . .	389
10.7.2	TCS Failure Recovery . . . . .	392
10.7.3	TCS Survival Mode. . . . .	393
10.7.4	TCS FDIR Events . . . . .	395
10.8	Payload FDIR. . . . .	396
10.8.1	General Failure Handling . . . . .	397
10.8.2	Payload FDIR Events. . . . .	400
10.9	Failure Propagation . . . . .	400
10.10	Satellite Safe Mode Implementation. . . . .	401
10.11	Ground Based FDIR . . . . .	402
10.11.1	Observability of the Space Segment. . . . .	402
10.11.2	Commandability of the Space Segment . . . . .	403
10.11.3	Ground Analyses. . . . .	404
<b>11</b>	<b>Satellite Mission Phases and Planning . . . . .</b>	<b>405</b>
	Jens Eickhoff, Michael Lengowski and Kai-Sören Klemich	
11.1	Overview . . . . .	406
11.2	Launcher Mechanical Interface . . . . .	407
11.3	Launcher Electrical Interface. . . . .	409
11.4	Activities Before Launcher Integration. . . . .	410
11.5	Pre-launch Activities and Checks . . . . .	412
11.6	Launch and Early Orbit Phase . . . . .	413
11.6.1	Spacecraft Power-up to Safe Mode . . . . .	413
11.6.2	Spacecraft Link Establishment. . . . .	415
11.6.3	Initial System Checkout . . . . .	416
11.7	Platform Equipment Commissioning in Orbit . . . . .	417
11.8	Nominal Operation Phase. . . . .	419
11.9	End of Life Phase . . . . .	419
<b>12</b>	<b>Stuttgart Mission Control Infrastructure . . . . .</b>	<b>421</b>
	Jens Eickhoff, Nico Bucher, Maximilian Böttcher, Charles Thibaut, Dougie Johnman and Bryan Tatman	
12.1	Platform Control Infrastructure . . . . .	422
12.1.1	Digital TM/TC Processing Components . . . . .	424
12.1.2	RF Signal Processing. . . . .	428
12.1.3	The High Frequency Chain. . . . .	441
12.1.4	The Antenna System . . . . .	442
12.2	Flight Dynamics Infrastructure . . . . .	446
12.3	Spacecraft Link Establishment Process. . . . .	448
12.4	Science Data Signal Chain . . . . .	448

<b>13</b>	<b>Stuttgart/DLR Infrastructure for LEOP</b>	<b>451</b>
	Peter Willburger, Klaus Wiedemann, Rolf Kozlowski, Marcin Gnat, Ciprian Furtuna, Jens Eickhoff and Nico Bucher	
13.1	Link Between IRS and the DLR Antenna Station	452
13.2	DLR Antenna Station Infrastructure	453
13.3	GSOC Systems Supporting the FLP Mission	457
13.3.1	Space Link Extension (SLE) System	457
13.3.2	Automated File Distribution System	460
13.4	Operations Workflow	462
13.4.1	Scheduling Process	462
13.4.2	LEOP Phase	464
13.4.3	Commissioning Phase	464
13.4.4	Routine Phase	465
<b>14</b>	<b>Earth Observation Mission Planning</b>	<b>467</b>
	Kai-Sören Klemich, Gianluca Cerrone and Wolfgang Heinen	
14.1	MOIS Infrastructure	468
14.2	Scheduler Resource Model	472
14.3	Mission Planning Infrastructure and Work Flow	473
<b>15</b>	<b>Flight Procedures</b>	<b>481</b>
	Kai-Sören Klemich and Jens Eickhoff	
15.1	Definitions for FLP Flight Procedures	482
15.2	Types of Procedures	482
15.2.1	Types of Procedures by Content	482
15.2.2	Types of Procedures by Usage Scenario	484
15.3	Flight Procedure Naming Convention	486
15.4	Flight Procedure Example	486
15.5	List of FLP Flight Procedures	492
<b>16</b>	<b>FLP Mission Information Database</b>	<b>493</b>
	Kai-Sören Klemich and Jens Eickhoff	
16.1	Introduction	494
16.2	General Concepts	494
16.3	Telecommands and TC Sequence Tables	498
16.4	TM Packet Definitions and Identification	499
16.5	TM Parameter and Displays Tables	502
16.6	TM Parameter Identification	503
16.7	Parameter Format Definition	505
<b>17</b>	<b>Annexes and Data Sheets</b>	<b>507</b>
	Jens Eickhoff	
17.1	Software Constants and FDIR Limits	508
17.2	Polling Sequence Table for I/O-Board Access	509

17.3	Spacecraft Telecommand/Telemetry Definitions . . . . .	512
17.3.1	Telecommand Definitions . . . . .	512
17.3.2	Telemetry Definitions . . . . .	556
