
Contents

1	Preliminaries	1
1.1	Matrix Properties	1
1.2	Solving Simultaneous Equations	3
	Gaussian Elimination	4
	The Gauss–Jordan Method	4
1.3	Inverse of a Matrix	6
1.4	Matrix Multiplication	8
1.5	Exercises	9
2	Introduction	13
2.1	Linear Programming	13
2.2	Ratio Method	18
2.3	Exercises	27
3	Dimension of the Solution Space	29
3.1	Solution Spaces	29
3.2	Convex Sets and Convex Functions	31
3.3	Geometric Interpretation of Linear Programs	34
3.4	Theorem of Separating Hyperplanes	35
3.5	Exercises	37
4	Introduction to the Simplex Method	39
4.1	Equivalent Formulations	39
4.2	Basic, Feasible, and Optimum Solutions	41
4.3	Examples of Linear Programs	44
4.4	Pivot Operation	46
4.5	Simplex Method	47
4.6	Review and Simplex Tableau	51
4.7	Linear Programs in Matrix Notation	55
4.8	Economic Interpretation of the Simplex Method	56
4.9	Summary of the Simplex Method	57
4.10	Exercises	57

5	Duality and Complementary Slackness	61
5.1	Primal and Dual Programs	61
5.2	Duality and Complementary Slackness	63
5.3	Economic and Geometric Interpretation	65
5.4	Dual Simplex Method	66
5.5	Exercises	71
6	Revised Simplex Method	73
6.1	Revised Simplex Method	73
6.2	Simplified Calculation	79
7	Column Generating Technique	81
8	The Knapsack Problem	87
8.1	Introduction	87
8.2	Landa's Algorithm	93
	High-Level Description of Landa's Algorithm	101
8.3	Exercises	101
9	Asymptotic Algorithms	103
9.1	Solving Integer Programs	103
9.2	Exercises	112
10	The World Map of Integer Programs	113
11	Linear and Integer Programming in Practice	117
11.1	Formulating a Real-World Problem	117
11.2	Tips and Tricks for Expressing Linear and Integer Programs	121
	Linear Programming	121
	Integer Linear Programming	124
11.3	Using Modern Linear and Integer Programming Solvers	128
	Appendix: The Branch and Bound Method of Integer Programming	131
	Epilogue	133
	References	137
	Index	141

Linear and Integer Programming Made Easy

Hu, T.C.; Kahng, A.B.

2016, X, 143 p. 24 illus., 1 illus. in color., Hardcover

ISBN: 978-3-319-23999-6
