Supervisor’s Foreword	ix
Preface	xiii
Acknowledgments	xv
1 Introduction	1
References	4
2 Artificial Evolution	7
2.1 Introduction	7
2.2 Deriving the CMA-ES Heuristically	10
2.2.1 Invariance Properties	14
2.2.2 The Benefit of Parameterization	17
2.3 Deriving Evolutionary Algorithms from Evolutionary Game Theory	18
2.3.1 The Replicator Equation	18
2.3.2 Parameterizing the Replicator Equation	20
2.3.3 Evolution Equations for the Exponential Family	21
2.3.4 Evolution for a Gaussian Distribution	21
2.3.5 Solving the Replicator Equation with Exponential Families	22
2.3.6 Global Convergence for Replicator Equations	24
2.3.7 Change in Entropy	25
2.4 Computation Time and Evolution	26
References	27
3 Optimization	29
3.1 Introduction	29
3.1.1 Optimizing Materials at the Micro-scale	29
3.1.2 Shape in Granular Mechanics	30
3.1.3 Optimizing Granular Materials via Shape	32

3.2	Experiment and Simulation Methodology	33
3.2.1	Experimental Procedure	33
3.2.2	Simulation Procedure	34
3.2.3	Calibrating the Simulation Parameters	34
3.3	Developing a Representation for Shape	36
3.3.1	The Basic Blueprint Rules	36
3.3.2	Benchmarking the CMA-ES Using Blueprint Rules	37
3.3.3	The Generalized Blueprint Rules	39
3.4	Optimization Results	40
3.4.1	The Stiffest and the Softest Packing Shapes	41
3.4.2	Discovering Strain-Stiffeners	43
3.5	Summary	44
	References	46
4	Inverse Problems	49
4.1	Introduction	49
4.1.1	Defining Inverse Problems	49
4.1.2	Design Rules as a Solution	50
4.2	Experiment and Simulation Methodology	52
4.2.1	Experimental Procedure	52
4.2.2	Simulation Procedure	53
4.3	Solving the Inverse Problem	55
4.3.1	Finding the Extreme Packing Shapes	55
4.3.2	Analysis of the Results	56
4.3.3	Creating and Using Design Rules	58
4.4	Summary	60
	References	61
5	Transitions of Designs	63
5.1	Introduction	63
5.1.1	Stability of Designs	63
5.1.2	Designing a Granular Fluid to Freeze	64
5.2	Simulation Methodology	65
5.3	Examining Transitions Between Designs	65
5.3.1	Finding the First Shapes to Freeze	65
5.3.2	Families of Fastest Cooling Shapes	67
5.3.3	The Transition from Linear to Compact Geometries	68
5.4	Summary	70
	References	72
6	Online Design	73
6.1	Introduction	73
6.2	Algorithmic Framework	74
6.3	A Particle on a Substrate	75
6.3.1	Problem Definition	75
6.3.2	Simulation Methodology	76

6.3.3	Controlling the Particle with a Linear Field	76
6.3.4	Controlling the Particle with a Complicated Potential	78
6.4	Folding a Toy Protein	79
6.4.1	Problem Definition	79
6.4.2	Simulation Methodology	80
6.4.3	Folding an Octahedron	81
6.5	Summary	82
	References	85
7	Conclusions	87

The Automated Design of Materials Far From
Equilibrium

Miskin, M.Z.

2016, XIX, 89 p. 39 illus., 7 illus. in color., Hardcover

ISBN: 978-3-319-24619-2
