

Contents

1	Introduction	1
1.1	Motivation	1
1.2	Models, Sensing, and Control Specifications	4
1.3	Notation	5
2	Models of Mobile Robots in the Plane	7
2.1	The Common Models	7
2.1.1	A 1D Rover	7
2.1.2	2D Integrator Point	8
2.1.3	Unicycles	10
2.1.4	Bicycles	12
2.1.5	Summary	16
2.2	Feedback Linearization of the Unicycle	17
2.3	Stabilizing the Unicycle to the Origin	19
2.3.1	Summary	23
3	The Flocking Problem	25
3.1	Introduction	25
3.2	Problem Formulation	25
3.3	Flocking with Fixed Neighbours	27
3.3.1	Derivation of the Kuramoto Model	29
3.3.2	Solution of the Flocking Problem	30
3.4	The Control Law of Jadbabaie, Lin, and Morse	32
4	The Rendezvous Problem: Fixed Neighbours	35
4.1	Introduction	35
4.2	Cyclic Pursuit	36
4.3	General Fixed Neighbours	40
4.3.1	Rendezvous Problem for Integrator Points	40
4.3.2	Solution of the Rendezvous Problem	44

4.4	Rendezvous of Unicycles	46
4.5	From Rendezvous to Formation Stabilization	50
4.6	Infinitely Many Robots	52
4.7	On Digital Implementation of Controllers	55
5	The Rendezvous Problem: Limited Camera Range	57
5.1	Introduction	57
5.2	General Results	59
5.3	Numerical Issues	65
6	Introduction to Flying Robots	69
6.1	Introduction	69
6.1.1	Common Flying Robots	69
6.1.2	Onboard Sensors	71
6.2	Modelling	72
6.2.1	2D Flying Robot	72
6.2.2	3D Flying Robot	74
6.2.3	Special Case: Quadrotor Helicopters	77
6.3	Flocking of 2D Flying Robots	78
6.4	Flocking of 3D Flying Robots	86
6.5	Rendezvous of 3D Flying Robots	93
	Series Editors' Biography	95
	Appendix: On the Literature	97
	References	103

Flocking and Rendezvous in Distributed Robotics

Francis, B.A.; Maggiore, M.

2016, X, 105 p. 64 illus. in color., Softcover

ISBN: 978-3-319-24727-4
