

Contents

1	Energy Policy Making: A Complex Dynamic Task	1
1.1	Introduction	1
1.2	Dynamics of Energy Policy: An Overview	3
1.3	Organization of This Book	5
1.4	Summary	6
	References	6
2	Modeling and Simulation in Service of Energy Policy: The Challenges	7
2.1	Energy Systems Modeling and Its Challenges	7
2.1.1	Uncertainties Abound	8
2.1.2	Existence of Nonlinear Relationships Is a Reality	9
2.1.3	Time Lags Can't Be Ignored	10
2.1.4	Causation Not Correlation Informs Strategic Decisions	10
2.1.5	Energy Systems Are Essentially Feedback Systems	11
2.2	Summary	11
	References	12
3	Meeting the Challenges: Energy Policy Modeling with System Dynamics	13
3.1	System Dynamics and Energy Policy Modeling	13
3.2	Modeling Causality in Systems Dynamics	16
3.3	CLD as a Tool to Represent a Dynamic Hypothesis	20
3.4	Energy System as a System of Interconnected Feedback Loops of Stocks and Flows	21
3.5	The Language: Representation of Stocks and Flows	22
3.6	Summary	24
	References	25

4	Understanding the Physics of Stocks and Flows	27
4.1	Physics of a Positive Feedback Loop: A Growth-Propelling Behavior	27
4.2	Physics of a Negative Feedback Loop: A Goal-Seeking Behavior	29
4.3	Dynamics of Material Delays and Information Averaging Processes	32
4.3.1	Basic Dynamics of Material Delays in Energy Systems	32
4.3.2	Structure and Behavior of Information Delays of Energy Systems	34
4.4	Dynamics of Nonlinearities of Energy Systems	36
4.5	Summary	37
	References	38
5	On the Modeling of Key Structural Process of Energy Systems	39
5.1	Stocks and Flows of Energy Demand Process	39
5.2	Modeling of Interfuel Substitution Process and Policy Incentives	42
5.3	Stocks and Flows of the Manpower Recruitment and Training Processes	45
5.4	Dynamics of Energy Production Process: Energy Supply System	47
5.5	Stocks and Flows of Environmental Emissions and CO ₂ Tax	49
5.6	Understanding the Physics of Other Energy Systems Related Processes	53
5.7	Stocks and Flows Based View Is All About the Integration	53
5.8	Summary	55
	References	55
6	Physics of Stocks and Flows in Action	57
6.1	Model 1: Green Power in Ontario (Source: Qudrat-Ullah 2014)	57
6.1.1	Context and Objective of Model (i.e., Model 1) Development	57
6.1.2	Overview of Model 1 Structure	58
6.1.3	Validity Testing of Model 1	60
6.1.4	Key Insights and Energy Policy Implications	60
6.2	Model 2: MDES RAP (Source: Qudrat-Ullah 2015)	61
6.2.1	The Context and Objective of Model (i.e., Model 2) Development	61
6.2.2	Overview of MDES RAP Structure	62
6.2.3	Validity Testing of MDES RAP	62
6.2.4	Key Insights and Energy Policy Implications	64

- 6.3 Model 3: Electricity Generation Capacity in Canada
(Source: Qudrat-Ullah 2013) 65
 - 6.3.1 The Context and Objective of Model (i.e., Model 3)
Development. 65
 - 6.3.2 Overview of Model 3 Structure 65
 - 6.3.3 Validity Testing of Model 3 66
 - 6.3.4 Key Insights and Energy Policy Implications. 67
- 6.4 Summary 68
- References 68
- 7 Finale 71**
 - 7.1 Roadmap for Improved Decision Making in the Energy
Policy Domain. 71
 - 7.2 A Few Personal Reflections. 72
- Index 75**

The Physics of Stocks and Flows of Energy Systems
Applications in Energy Policy

Qudrat-Ullah, H.

2016, XV, 77 p. 41 illus., 6 illus. in color., Softcover

ISBN: 978-3-319-24827-1
