1	Harmonic and Nonlinear Resonances	1
1.1	Simple Examples of Resonance	2
1.1.1	What is the Effect of Resonance?	3
1.1.2	Realization of Periodic Forces	3
1.2	Nonlinear Resonance in the Duffing Oscillator	4
1.2.1	Theoretical Equation for the Amplitude of Oscillation	5
1.2.2	Resonance in a Linear System	6
1.2.3	Hysteresis and Jump Phenomenon in the Duffing Oscillator	7
1.2.4	Analog Circuit Simulation	10
1.2.5	Resonance in the Overdamped Duffing Oscillator	11
1.3	Pendulum System	12
1.4	Morse Oscillator	14
1.5	Linear and Nonlinear Jerk Systems	16
1.6	Van der Pol Oscillator	19
1.6.1	Theoretical Treatment	19
1.6.2	Numerical Verification	20
1.6.3	Analog Circuit Simulation	22
1.7	Resonance in Micro- and Nano-Electromechanical Resonators	24
1.7.1	A Double Clamped 3C-SiC Nanoscale Beam	25
1.7.2	A Doubly Clamped Cr-Au Bilayer NEM Resonator	27
1.8	Some Other Examples of Resonance	28
1.8.1	Resonance Magnetoelectric Effect	28
1.8.2	Nonlinear Resonance Ultrasonic Spectroscopy	28
1.8.3	Crack Breathing and Resonance	29
1.9	Quantum Resonance	29
1.10	Applications of Resonance	32

1.11	Resonance Disaster	34
1.12	Concluding Remarks.....	35
	References.....	36
2	Stochastic Resonance	39
2.1	Characterization of Stochastic Resonance	40
2.2	Stochastic Resonance in Duffing Oscillator	41
2.2.1	Time-Series Plot.....	42
2.2.2	Mean Residence Time	44
2.2.3	Power Spectrum and <i>SNR</i>	45
2.2.4	Probability Distribution of Residence Times	47
2.3	Theory of Stochastic Resonance	49
2.3.1	Analytical Expression for Power Spectrum	50
2.3.2	Determination of Signal-to-Noise Ratio	53
2.4	Stochastic Resonance in a Coupled Oscillator	55
2.5	Stochastic Resonance in a Magnetic System	57
2.6	Stochastic Resonance in a Monostable System.....	61
2.7	Linear Systems with Additive and Multiplicative Noises.....	64
2.7.1	Effect of Additive Noise Only	64
2.7.2	Effect of Multiplicative Noise Only	64
2.7.3	Effect of Multiplicative and Additive Noises	66
2.8	Stochastic Resonance in Quantum Systems	69
2.8.1	A Particle in a Double-Well Potential	69
2.8.2	A Double Quantum Dot System.....	70
2.9	Applications of Stochastic Resonance	71
2.9.1	Vibration Energy Harvesting	72
2.9.2	Stochastic Encoding.....	72
2.9.3	Weak Signal Detection	73
2.9.4	Detection of Weak Visual and Brain Signals	73
2.9.5	Stochastic Resonance in Sensory and Animal Behaviour	75
2.9.6	Human Psychophysics Experiments	75
2.9.7	Noise in Human Muscle Spindles and Hearing.....	76
2.9.8	Electrophysiological Signals.....	76
2.9.9	Stochastic Resonance in Raman and X-Ray Spectra	77
2.10	Noise-Induced Stochastic Resonance Versus Noise-Induced Synchronization	77
2.11	Concluding Remarks.....	78
	References.....	78
3	Vibrational Resonance in Monostable Systems	83
3.1	Duffing Oscillator	84
3.1.1	Theoretical Description of Vibrational Resonance	85
3.1.2	Analysis of Vibrational Resonance.....	87
3.2	Effect of High-Frequency Force in a Linear System	89

3.3	Quintic Oscillator	90
3.3.1	Theoretical Expression for the Response Amplitude	92
3.3.2	Single-Well Potential ($\omega_0^2, \beta, \gamma > 0$)	93
3.3.3	Single-Well Potential ($\omega_0^2, \gamma > 0, \beta < 0,$ $\beta^2 < 4\omega_0^2\gamma$).....	96
3.3.4	Double-Hump Single-Well Potential ($\omega_0^2 > 0, \beta$ -Arbitrary, $\gamma < 0$)	97
3.4	Asymmetric Duffing Oscillator	100
3.4.1	Theoretical Expression for Response Amplitude	101
3.4.2	Asymmetry Induced Additional Resonance	102
3.4.3	Resonance with Nonsinusoidal Periodic Forces	103
3.4.4	Effect of Noise on Resonance	105
3.5	Overdamped Asymmetric Duffing Oscillator	105
3.6	Morse Oscillator	106
3.7	Quantum Mechanical Morse Oscillator.....	110
3.8	Significance of Biharmonic Signals.....	114
3.9	Concluding Remarks.....	115
	References.....	116
4	Vibrational Resonance in Multistable and Excitable Systems.....	119
4.1	Underdamped Double-Well Duffing Oscillator	120
4.1.1	Theoretical Approach	121
4.1.2	Vibrational Resonance for $\alpha_1 = \alpha_2 = 1$	122
4.1.3	Role of Depth of the Potential Wells	125
4.1.4	Role of Location of the Minima of the Potential	126
4.2	Overdamped Double-Well Duffing Oscillator	127
4.3	Resonance in a Triple-Well Potential System	128
4.4	Vibrational Resonance in an Excitable System.....	131
4.5	Stochastic Resonance in FitzHugh–Nagumo Equation	134
4.6	Concluding Remarks.....	136
	References.....	136
5	Vibrational and Stochastic Resonances in Spatially Periodic Systems	139
5.1	Vibrational Resonance in Underdamped Pendulum System	140
5.1.1	Analytical Expression for the Response Amplitude Q	140
5.1.2	Connection Between Resonance and ω_r	142
5.1.3	Role of Stability of the Equilibrium Points	143
5.2	Vibrational Resonance in Overdamped Pendulum System	145
5.3	Vibrational Resonance in a Modified Chua's Circuit Equation... ..	146
5.3.1	The Modified Chua's Circuit Model Equation.....	146
5.3.2	Role of Number of Breakpoints N on Resonance	148
5.3.3	Jump Phenomenon	150
5.4	Stochastic Resonance in the Pendulum System	152

5.5	Stochastic Resonance in a Multi-Scroll Chua's Circuit Equation.....	155
5.6	Comparison Between Stochastic and Vibrational Resonances ...	158
5.7	Concluding Remarks.....	159
	References.....	160
6	Nonlinear and Vibrational Resonances in Time-Delayed Systems	161
6.1	Time-Delay is Ubiquitous	162
6.2	Nonlinear Resonance in Time-Delayed Duffing Oscillator	164
6.2.1	Theoretical Expression for Response Amplitude	164
6.2.2	Response Amplitude A Versus the Control Parameters ω , γ and α	166
6.3	Resonance in a Linear System with Time-Delayed Feedback	169
6.4	Vibrational Resonance in an Underdamped and Time-Delayed Duffing Oscillator.....	171
6.4.1	Theoretical Expression for the Response Amplitude Q	171
6.4.2	Resonance Analysis in the Double-Well System	172
6.4.3	Resonance Analysis in the Single-Well System	176
6.5	Vibrational Resonance in an Overdamped Duffing Oscillator	177
6.6	Some Common Effects of Time-Delayed Feedback	180
6.7	Effect of Multi Time-Delayed Feedback.....	182
6.8	Vibrational Resonance with Some Other Time-Delayed Feedbacks.....	185
6.8.1	Gamma Distributed Time-Delayed Feedback.....	185
6.8.2	Integrative Time-Delayed Feedback.....	188
6.8.3	State-Dependent Time-Delayed Feedback	190
6.8.4	Feedback with Random Time-Delay	195
6.9	Concluding Remarks.....	198
	References.....	198
7	Signal Propagation in Unidirectionally Coupled Systems.....	203
7.1	Significance of Unidirectional Coupling.....	204
7.2	Nonlinear Resonance and Signal Propagation.....	206
7.2.1	Theoretical Treatment.....	206
7.2.2	Analysis of Effect of One-Way Coupling	208
7.2.3	Unidirectionally Coupled Linear Systems	211
7.3	Vibrational Resonance and Signal Propagation	211
7.3.1	Theoretical Treatment.....	212
7.3.2	Effect of δ and g on Q_i	214
7.4	Stochastic Resonance and Signal Propagation	217
7.4.1	One-Way Coupled Bellows Map	217
7.4.2	Numerical Results.....	218
7.5	Concluding Remarks.....	222
	References.....	222
