

Contents

1 Introduction	1
2 Ibn Sīnā and the Reinvention of Epistemology	9
2.1 Ibn Sīnā by Himself	9
2.2 Ibn Sīnā Rediscovered al-Fārābī: The Man Whom He Wishes to Meet!	14
2.2.1 From Metaphysics to Mathematical Knowledge	14
2.2.2 Algebra: The New Universal Science	17
3 Refutation of the Greek Conception of Number	25
3.1 Criticism of Plato's Realism	27
3.2 Criticism of the Pythagoreans' Empiricism	28
3.3 Criticism of Aristotle's Conception of Existence in <i>re</i> and His Notion of the Infinite	30
3.4 Criticism of Euclid's Conception of Plurality	34
4 Ibn Sīnā's Basic Theory of Knowledge	41
4.1 Intentionality as Mental Existence	41
4.2 Sensibility (<i>al-iḥsās</i>)	45
4.3 Memory (<i>al-khayāl</i>)	45
4.4 The Intellect (<i>al-'aql</i>)	48
5 The Logico-Epistemic Construction of Numbers	51
5.1 The Basic Epistemic Concepts of the Construction of Numbers: Aggregate, Repetition, Combinative Unity	51
5.1.1 Plurality as Aggregate	51
5.1.2 Repetition as Operator and the Role of Memory	53
5.1.3 Intentionality as Combinative Unity	57

- 5.2 The Logical Construction of Numbers: Instantiation,
Invariance, Equivalence Classes 61
 - 5.2.1 The Apprehension of Essence as Invariant 61
 - 5.2.2 Essence as Equivalence Relation. 65
- 6 Concluding Remarks 69
