1	Historical Introduction	1
1.1	The Main Landmarks in the Development of the Special Theory of Relativity	1
1.2	The Principle of Relativity of Galileo. Galileo's Invariance Hypothesis. The Law of Inertia. Inertial Frames of Reference	4
1.2.1	The Galilean Transformation	5
1.3	Rømer and the Speed of Light	6
1.4	Newton's Laws of Motion. Inertia and Inertial Frames of Reference.	10
1.4.1	The Invariance of Newton's Second Law of Motion Under the Galilean Transformation	11
1.5	The Aberration of Light.	12
1.5.1	The Discovery by Bradley of the Aberration of Stellar Light	14
1.6	Arago's Measurements Concerning the Constancy of the Speed of Light from Stars.	18
1.7	Measurements of the Speed of Light in the Laboratory	21
1.7.1	The Possibility of Dependence of the Speed of Light in Vacuum on Its Frequency	23
1.8	Attempts to Measure the Dragging of Aether by Moving Media	23
1.8.1	The Experiment of Fizeau	24
1.8.2	The Experiment of Hoek	27
1.9	Maxwell's Equations and the Wave Equation	28
1.10	The Experiment of Michelson and Morley	30
1.11	The Lorentz-FitzGerald Contraction Hypothesis	37
1.12	The Increase of the Mass of the Electron with Speed.	38
1.13	The Invariance of Maxwell's Equations and the Lorentz Transformation	42
1.14	The Formulation of the Special Theory of Relativity	43
	References.	44

2	Prolegomena	47
2.1	Inertial Frames of Reference	47
2.1.1	The Earth, the Sun and the Galaxy as Inertial Frames of Reference	48
2.2	The Calibration of a Frame of Reference and the Synchronization of Its Clocks	49
2.3	The Relativity of Simultaneity	51
2.4	The Relativity of Time and Length	53
2.4.1	The Invariance of the Dimensions of a Body Which Are Perpendicular to Its Velocity	53
2.4.2	The Relativity of Time	54
2.4.3	The Relativity of Length	56
2.5	The Inevitability of the Special Theory of Relativity	58
	Reference	59
3	Relativistic Kinematics	61
3.1	The Lorentz Transformation for the Coordinates of an Event	61
3.1.1	The Contraction of Length	69
3.1.2	The Dilation of Time	76
3.2	The Transformation of Velocity	83
3.2.1	The Transformation of the Components of Velocity	83
3.2.2	The Transformation of the Magnitude of Velocity	84
3.2.3	The Transformation of the Lorentz Factor, γ	86
3.2.4	Speed c as an Upper Limit for Speeds	87
3.3	The Transformation of Acceleration	91
3.3.1	Proper Acceleration	92
4	Applications of Relativistic Kinematics	97
4.1	The ‘Meson’ Paradox	97
4.1.1	Experimental Verification of the Dilation of Time with Muon Experiments at CERN	102
4.2	The Apparent Focusing of Fast Charged Particle Beams Due to the Dilation of Time	103
4.3	The Sagnac Effect	106
4.4	Clocks Moving Around the Earth	109
4.5	The Experiment of Hafele and Keating	116
4.6	Einstein’s Train	118
4.7	The Twin Paradox	120
4.8	Motion with a Constant Proper Acceleration. Hyperbolic Motion	123
4.8.1	The Dilation of Time and Journeys in Space	126

4.9	Two Successive Lorentz Transformations.	
	The Wigner Rotation	129
4.9.1	The Thomas Precession	133
4.9.2	The Thomas Precession in the Cases of a Planetary or a Stellar System	135
	References.	137
5	Optical Phenomena.	139
5.1	The Aberration of Light.	139
5.2	Fizeau's Experiment. Fresnel's Aether Dragging Theory	141
5.3	The Doppler Effect	142
5.3.1	The Longitudinal Doppler Effect.	143
5.3.2	The General Doppler Effect	146
5.3.3	The Experimental Verification of the Relativistic Terms of the Doppler Effect.	152
5.4	Relativistic Beaming or the Headlight Effect	155
5.4.1	Synchrotron Radiation or Magnetic Bremsstrahlung.	160
5.5	The Forces Exerted by Light	161
	References.	162
6	Relativistic Dynamics	163
6.1	The Definition of Relativistic Momentum. Relativistic Mass.	163
6.2	Relativistic Energy	166
6.3	The Relationship Between Momentum and Energy	170
6.3.1	Units of Energy, Mass and Momentum	170
6.4	Classical Approximations.	172
6.5	Particles with Zero Rest Mass.	175
6.6	The Conservation of Momentum and of Energy	176
6.7	The Equivalence of Mass and Energy	178
6.7.1	The Validity of the Conservation of Momentum and Energy During the Transmutation of Nuclei and the Annihilation and Creation of Particles	179
6.8	The Transformation of Momentum and Energy.	186
6.9	The Zero-Momentum Frame of Reference	189
6.10	The Transformation of the Total Momentum and the Total Energy of a System of Particles	193
6.10.1	The Invariance of the Quantity $E^2 - c^2 p^2$ for a System of Particles	194
6.11	The Collision of Two Identical Particles	197
6.11.1	Experimental Test of the Special Theory of Relativity with Colliding Electrons	200
6.12	The Transformation of Force	200

6.13	Motion Under the Influence of a Constant Force. The Motion of a Charged Particle in a Constant Uniform Electric Field.	203
6.14	The Motion of a Charged Particle in a Constant Homogeneous Magnetic Field.	205
	References.	211
7	Applications of Relativistic Dynamics.	213
7.1	The Compton Effect	213
7.2	The Inverse Compton Effect.	217
7.3	The Consequences of the Special Theory of Relativity on the Design of Particle Accelerators	220
7.3.1	Linear Accelerators	220
7.3.2	Cyclotron, Synchrocyclotron and Synchrotron.	222
7.4	Mass Defect and Binding Energy of the Atomic Nucleus.	224
7.4.1	Nuclear Reactions and Binding Energy	226
7.4.2	The Experimental Test of the Equivalence of Mass and Energy in Nuclear Reactions	230
7.5	Threshold Energy	232
7.6	The General Equations for the Motion of a Relativistic Rocket	237
7.6.1	The Photon Rocket	240
	References.	242
8	Minkowski's Spacetime and Four-Vectors	243
8.1	The 'World' of Minkowski	243
8.1.1	The Minkowski Diagram of the Lorentz Transformation	247
8.1.2	Causality. Past, Present and Future	250
8.1.3	The Minkowski Diagram for the Effect of Length Contraction	252
8.1.4	The Minkowski Diagram for the Effect of Time Dilation	253
8.1.5	A Minkowski Diagram for the Doppler Effect	256
8.2	Four-Vectors	258
8.2.1	The Position Four-Vector.	260
8.2.2	The Four-Vector of Velocity.	261
8.2.3	The Four-Vector of Acceleration.	263
8.2.4	The Energy-Momentum Four-Vector	265
8.2.5	The Four-Vector of Force	270
8.2.6	The Four-Vectorial Equation of Motion	272
