

Contents

Part I Promoting Mathematics Students’ Cognitive Development

1	Developing Students’ Mathematical Intelligence	5
	References	10
2	Presentations into Investigations	13
2.1	The Long-Division Algorithm and <i>Take Things Apart</i>	15
2.2	Combining Fractions and <i>Changing Representation</i>	17
2.3	Invert and Multiply and <i>Make the Problem Simpler</i>	18
2.4	Mathematical Slope and <i>Visualize</i>	21
2.5	Arithmetic Series and <i>Tinkering</i>	22
2.6	Quadratic Equations and <i>Make the Problem Simpler</i>	25
	References	28
3	Habits of Mind—The Heart of the Mathematics Curriculum: Some Instances	31
3.1	Visualizing	39
3.2	Looking for Patterns	40
3.3	Tinkering	41
	References	44

Part II Promoting Mathematics Students’ Social Development

4	Lessons from a Third-Grade Mathematics Classroom	49
	References	52
5	Sharing a Language for Productive Inquiry	53
	References	57
6	Collaborative Mathematics Investigations	59
6.1	Four-of-a-Kind	63
6.2	Would 400 Be Better Than 360?	66

6.3 Mathematics of a Fountain Arc	71
6.4 Approximating the Area of a Simple Closed Curve	74
References	82
 Part III Promoting Mathematics Students' Psychological Development	
7 Providing a Supportive Mathematics Classroom	85
References	94
8 Including Students' Goals	97
References	105
 Part IV Assessing Students' Mathematics Experience	
9 Grades and Tests	109
References	114
10 Homework	115
References	117
11 Classroom Observations	119
11.1 Students' Psychological Development	119
11.2 Social Development	121
11.3 Cognitive Development	124
References	127
 Part V In Conclusion	
12 Summing Up	131
References	133
What Is Your Thinking?	135
Bibliography	139
Index	145

Enabling Students in Mathematics
A Three-Dimensional Perspective for Teaching
Mathematics in Grades 6-12

Gordon, M.

2016, XVI, 147 p. 19 illus. in color., Hardcover

ISBN: 978-3-319-25404-3
