

Contents

1	The Tree in Earth's Terrestrial Ecosystems	1
1.1	Functions of the Tree in the Biogeochemical Cycle of Materials	2
	The Carbon Cycle	2
	Forests in the Ecosphere	7
	Forests in the European Union and Lithuania	11
1.2	Life Cycle of the Tree	14
1.3	Benefits of the Tree in Environmental Protection Technologies . . .	22
2	Contamination Features of Ecosystem Components in a Forested Surrounding Environment	29
2.1	Edaphic Contamination and Its Ecogeological Evaluation	30
	Soil Contamination by Metals in Lithuania and Its Risk Assessment	35
2.2	Aqueous (Surface Runoff Water) Contamination Patterns in Urban Areas	42
	Chemical Properties of Surface Runoff Water	45
	Assessment of Metal Speciation in SRW Using Windermere Humic Aqueous Model	51
2.3	Aerogenic Contamination and Its Evaluation on Ecosystem-Based Approach	54
	Role of Deposit Media in Ecosystems with the Load of Aerogenic Contaminants	54
	Principles of Deposit Media Analysis: Analysis Strategy, Methods of Physical and Chemical Analysis	56
	Evaluating the Pollution of Deposit Media	59
	Use of Deposit Media for Evaluating Level of Ecosystem Contamination	62

3	Biogeochemical Aspect of Metal Uptake by Trees	81
3.1	Entering Entrance of Metals into Forest Ecosystems	81
3.2	Metals in Tree Rhizospheres, Uptake and Bioaccumulation in Trees	83
	Metals in the Rhizosphere	89
	Metal Transfer Through Root Tissues	91
	Metals in Tree Crowns	92
	Metal Transfer to and Accumulation in Stemwood	94
3.3	Impact of Biotic and Abiotic Factors on Metal Uptake by Trees	107
	Metal Concentrations in the Investigated Soils	114
	Differences in the Bioavailability of Metals in the Investigated Soils	116
	Differences in Metal Bioaccumulation in Pinewood Under the Impact of Different Factors	116
	Differences in Metal Biophilicity	117
	Variations in Equilibrium of the Soil–Pine Tree System	118
4	Biogeochemical and Functional Traits of a Tree in Metal-Contaminated Territory	127
4.1	Methodological Aspects of Metal Content Determination in a Tree	127
	Sampling Using Common Chisels	128
	Sampling Using Arched Chisels	128
	Sampling Using a Plane	129
	Sampling with an Increment Borer (Lithuanian Patent 5325)	130
	Practical Comparison of Methods	132
	Comparison of Mass of Wood Samples Applying the Method of Dispersive Analysis	133
4.2	Biogeochemical Traits of Trees in Metal-Contaminated Territory	134
	Soil Properties	136
	Differences in Metal Concentrations in Soils of Investigated Sites	137
4.3	Functional Traits of a Tree in Metal-Contaminated Territory	145
	Overall Dry Biomass of Trees and Their Separate Parts	145
	Diameter and Height of Trunk	146
	Ratio of Mass of Roots to Mass of Shoots	146
	Specific Length of Roots	147
	Maximum Lengths of Roots and Shoots	148
	Number of Roots and Shoots	148

5	The Role of Trees in Ecotechnologies	149
5.1	Bioindication and Phytoremediation: Practical Features of Metal Bioaccumulation in Trees	149
5.2	Dynamic Factor Method for Evaluation Metal Uptake Processes by Trees	154
	Definition of Dynamic Factors	154
	Practical Application of Dynamic Factors	158
	Advantages of Dynamic Factors	161
5.3	Modeling of Metal Transfer in Air–Tree–Soil System	163
	Results of Modeling the Spread of Particulate Matter	163
	Modeling the Translocation of Metals in the Soil–Tree System	170
	Phytotechnologies Involving Pine and Birch: Environmental Protection and Economic Assessment of Efficiency	176
6	Use of Wood Products for Water and Soil Quality Improvement	185
6.1	Biochar from Wood: Properties, Resources, and Applications	185
	Potential of Biochar Production from Wood Waste	187
	Characteristics of Wood Pyrolysis Process	189
	Impact of Pyrolysis Temperature and Raw Material (Wood Type) on Qualities of Biochar	190
	Prospects of Use of Wood Biochar	209
6.2	Wood Biochar as a Sustainable Soil Amendment: Metal Risk Evaluation	210
6.3	Use of Wood Biochar for Removing Metals from Urban Surface Runoff Water	226
6.4	Wood Ash as Fertilizer: Environmental Problem or Benefit	232
	Forest Fire Ash	233
	Ash of Wood and Incineration of Its Industrial Waste	242
7	The Use of Wood Products for Improving Air Quality	249
7.1	Wood Products in Systems for Biological Air Treatment	249
	Activated Carbon	257
	Wood Chips and Bark	257
	Wood Products as the Bulk of Biofilter Packing Material	258
7.2	Physicochemical Properties of Wood Products Used in Systems for Biological Air Treatment	260
	Specificities of Changes in Moisture, Porosity, Durability, and Pressure of Packing Material in Biofiltration Systems	260

Changes in the Temperature of the Packing Material and Their Impact on Biofilter Operation	262
Micromorphological Changes in Packing Material Under Different Temperatures and Removed Pollutants	265
Biofiltration Affecting Processes in Biofilter Loading	268
7.3 Microbiological Characteristics of Wood Products Used in Systems for Biological Air Treatment	270
Indigenous Microorganisms in Biochar-Based Biofilter Medium	271
Microorganisms Introduced in the Biochar-Based Biofilter Medium	272
Microorganisms Introduced into Biochar-Based Medium at Different Temperatures	274
Indigenous Microorganisms in Biofilter Medium Formed in Mixture of Wood Fiber and Inorganic Material	276
Establishing the Penetration Coefficient of the Packing Material	283
7.4 Design and Performance of Systems with Wood Products for Biological Air Treatment	286
Cartridge Biofilter	286
Biofilter-Adsorber	289
Plate-Type Biofilter	293
Removal Efficiency Under the Application of Wavy Lamellar Plates and Packing Material Made of Wood Fiber and Nonwoven Caulking Material (with Introduced Microorganisms)	297
Conclusions	303
References	311
Index	337

The Sustainable Role of the Tree in Environmental
Protection Technologies

Baltrėnaitė, E.; Baltrėnas, P.; Lietuvninkas, A.

2016, XX, 344 p. 257 illus., 216 illus. in color.,

Hardcover
