<b>Preface</b>	<b>xi</b>
<b>1 Frames in Finite-Dimensional Inner Product Spaces</b>	<b>1</b>
1.1 Some Basic Facts About Frames . . . . .	3
1.2 Extensions to Tight Frames and Dual Frames . . . . .	10
1.3 Frame Bounds and Frame Algorithms . . . . .	12
1.4 Frames in $\mathbb{C}^n$ . . . . .	16
1.5 Frames and the Discrete Fourier Transform . . . . .	21
1.6 Pseudo-inverses and the Singular Value Decomposition . . . . .	28
1.7 Finite-Dimensional Function Spaces . . . . .	33
1.8 Fusion Frames . . . . .	37
1.9 Applications of Finite Frames . . . . .	38
1.10 Remarks on Recent Frame Constructions . . . . .	42
1.11 Exercises . . . . .	44
<b>2 Infinite-Dimensional Vector Spaces and Sequences</b>	<b>47</b>
2.1 Banach Spaces and Sequences . . . . .	47
2.2 Operators on Banach Spaces . . . . .	50
2.3 Hilbert Spaces . . . . .	52

2.4	Operators on Hilbert Spaces . . . . .	53
2.5	The Pseudo-inverse Operator . . . . .	56
2.6	A Moment Problem . . . . .	58
2.7	The Spaces $L^p(\mathbb{R})$ , $L^2(\mathbb{R})$ , $\ell^p(\mathbb{N})$ , and $\ell^2(\mathbb{N})$ . . . . .	59
2.8	The Fourier Transform and Convolution . . . . .	61
2.9	Operators on $L^2(\mathbb{R})$ . . . . .	63
2.10	Exercises . . . . .	65
<b>3</b>	<b>Bases</b>	<b>67</b>
3.1	Bases in Banach Spaces . . . . .	68
3.2	Bessel Sequences in Hilbert Spaces . . . . .	73
3.3	Bases and Biorthogonal Systems in $\mathcal{H}$ . . . . .	76
3.4	Orthonormal Bases . . . . .	79
3.5	The Gram Matrix . . . . .	82
3.6	Riesz Bases . . . . .	86
3.7	Riesz Sequences . . . . .	92
3.8	Fourier Series and Gabor Bases . . . . .	94
3.9	Wavelet Bases . . . . .	97
3.10	Sampling and Analog–Digital Conversion . . . . .	102
3.11	Exercises . . . . .	105
<b>4</b>	<b>Bases and Their Limitations</b>	<b>109</b>
4.1	Bases and the Expansion Property . . . . .	109
4.2	Gabor Systems and the Balian–Low Theorem . . . . .	113
4.3	Bases and Wavelets . . . . .	115
4.4	General Shortcomings . . . . .	118
4.5	Exercises . . . . .	118
<b>5</b>	<b>Frames in Hilbert Spaces</b>	<b>119</b>
5.1	Frames and Their Properties . . . . .	120
5.2	Frame Sequences . . . . .	127
5.3	Frames and Operators . . . . .	128
5.4	Frames and Bases . . . . .	130
5.5	Characterization of Frames . . . . .	136
5.6	Continuous Frames . . . . .	145
5.7	Exercises . . . . .	148
<b>6</b>	<b>Tight Frames and Dual Frame Pairs</b>	<b>153</b>
6.1	Tight Frames . . . . .	154
6.2	Extension of Bessel Sequences to Tight Frames . . . . .	155
6.3	The Dual Frames . . . . .	156
6.4	Extension Problems for Bessel Sequences . . . . .	161
6.5	Approximately Dual Frames . . . . .	162
6.6	Exercises . . . . .	163

<b>7</b>	<b>Frames Versus Riesz Bases</b>	<b>165</b>
7.1	Conditions for a Frame Being a Riesz Basis . . . . .	166
7.2	Frames and Their Subsequences . . . . .	168
7.3	Riesz Frames and Near-Riesz Bases . . . . .	170
7.4	Frames Containing a Riesz Basis . . . . .	171
7.5	A Frame Which Does Not Contain a Basis . . . . .	173
7.6	A Moment Problem . . . . .	179
7.7	The Feichtinger Conjecture . . . . .	181
7.8	Exercises . . . . .	181
<b>8</b>	<b>Selected Topics in Frame Theory</b>	<b>183</b>
8.1	G-Frames . . . . .	184
8.2	Localization of Frames . . . . .	188
8.3	The R-Duals of a Frame . . . . .	190
8.4	Frame Theory via Unbounded Operators . . . . .	194
8.5	Frames and Signal Processing . . . . .	196
8.6	Exercises . . . . .	198
<b>9</b>	<b>Frames of Translates</b>	<b>199</b>
9.1	Sequences in $\mathbb{R}^d$ . . . . .	200
9.2	Frames of Translates . . . . .	203
9.3	Frames of Integer-Translates . . . . .	210
9.4	The Canonical Dual Frame . . . . .	213
9.5	Frames of Translates and Oblique Duals . . . . .	218
9.6	Irregular Frames of Translates . . . . .	226
9.7	Sampling Theory and Applications . . . . .	229
9.8	Frames of Exponentials . . . . .	232
9.9	Exercises . . . . .	238
<b>10</b>	<b>Shift-Invariant Systems in <math>L^2(\mathbb{R})</math></b>	<b>241</b>
10.1	Frame Properties of Shift-Invariant Systems . . . . .	241
10.2	Representations of the Frame Operator . . . . .	253
10.3	Exercises . . . . .	256
<b>11</b>	<b>Gabor Frames in <math>L^2(\mathbb{R})</math></b>	<b>257</b>
11.1	Continuous Representations . . . . .	259
11.2	Gabor Frames $\{E_{mb}T_{nag}\}_{m,n \in \mathbb{Z}}$ for $L^2(\mathbb{R})$ . . . . .	262
11.3	Necessary Conditions . . . . .	266
11.4	Sufficient Conditions . . . . .	268
11.5	The Wiener Space $W$ . . . . .	275
11.6	The Frame Set and Special Functions . . . . .	279
11.7	Gabor Frames Generated by B-Splines . . . . .	283
11.8	Exercises . . . . .	285

<b>12 Gabor Frames and Duality</b>	<b>287</b>
12.1 Popular Gabor Conditions . . . . .	288
12.2 Representations of the Gabor Frame Operator and Duality . . . . .	289
12.3 The Duals of a Gabor Frame . . . . .	295
12.4 The Canonical Dual Window . . . . .	302
12.5 Explicit Construction of Dual Frame Pairs . . . . .	306
12.6 Windows with Short Support and High Regularity . . . .	310
12.7 Extension of Bessel Sequences to Dual Pairs . . . . .	318
12.8 Approximately Dual Gabor Frames . . . . .	319
12.9 Tight Gabor frames . . . . .	320
12.10 Exercises . . . . .	324
<b>13 Selected Topics on Gabor Frames</b>	<b>327</b>
13.1 The Duality Principle . . . . .	328
13.2 The Zak Transform . . . . .	330
13.3 The Lattice Parameters . . . . .	336
13.4 Irregular Gabor Systems . . . . .	340
13.5 Localized Gabor Frames . . . . .	345
13.6 Wilson Bases . . . . .	347
13.7 Time–Frequency Localization of Gabor Expansions . . .	348
13.8 Applications of Gabor Frames . . . . .	354
13.9 Exercises . . . . .	356
<b>14 Gabor Frames in <math>\ell^2(\mathbb{Z})</math>, <math>L^2(0, L)</math>, <math>\mathbb{C}^L</math></b>	<b>359</b>
14.1 Translation and Modulation on $\ell^2(\mathbb{Z})$ . . . . .	360
14.2 Dual Gabor Frames in $\ell^2(\mathbb{Z})$ . . . . .	361
14.3 Dual Gabor Frames in $\ell^2(\mathbb{Z})$ Through Sampling . . . . .	362
14.4 Discrete Gabor Frames Through Sampling . . . . .	365
14.5 Gabor Frames for $L^2(0, L)$ via Periodization . . . . .	372
14.6 Gabor Frames in $\mathbb{C}^L$ . . . . .	375
14.7 Shift-Invariant Systems . . . . .	380
14.8 Frames in $\ell^2(\mathbb{Z})$ and Filter Banks . . . . .	381
14.9 Gabor frames in $\ell^2(\mathbb{Z}^d)$ . . . . .	383
14.10 Exercises . . . . .	383
<b>15 General Wavelet Frames in <math>L^2(\mathbb{R})</math></b>	<b>385</b>
15.1 The Continuous Wavelet Transform . . . . .	387
15.2 Sufficient and Necessary Conditions . . . . .	389
15.3 Dual Pairs of Wavelet Frames . . . . .	401
15.4 Exercises . . . . .	405
<b>16 Dyadic Wavelet Frames for <math>L^2(\mathbb{R})</math></b>	<b>407</b>
16.1 Wavelet Frames and Their Duals . . . . .	408
16.2 Tight Wavelet Frames . . . . .	411

16.3	Wavelet Frame Sets . . . . .	412
16.4	Frames and Multiresolution Analysis . . . . .	415
16.5	Exercises . . . . .	415
<b>17</b>	<b>Frame Multiresolution Analysis</b>	<b>417</b>
17.1	Frame Multiresolution Analysis . . . . .	418
17.2	Sufficient Conditions . . . . .	419
17.3	Relaxing the Conditions . . . . .	423
17.4	Construction of Frames . . . . .	425
17.5	Frames with Two Generators . . . . .	442
17.6	Some Limitations . . . . .	444
17.7	Exercises . . . . .	444
<b>18</b>	<b>Wavelet Frames via Extension Principles</b>	<b>445</b>
18.1	The General Setup . . . . .	446
18.2	The Unitary Extension Principle . . . . .	448
18.3	Applications to $B$ -splines I . . . . .	454
18.4	The Oblique Extension Principle . . . . .	459
18.5	Fewer Generators . . . . .	463
18.6	Applications to $B$ -splines II . . . . .	466
18.7	Approximation Orders . . . . .	471
18.8	Construction of Pairs of Dual Wavelet Frames . . . . .	473
18.9	Applications to $B$ -splines III . . . . .	476
18.10	The MRA Literature and Applications . . . . .	477
18.11	Exercises . . . . .	478
<b>19</b>	<b>Selected Topics on Wavelet Frames</b>	<b>479</b>
19.1	Irregular Wavelet Frames . . . . .	480
19.2	Oversampling of Wavelet Frames . . . . .	482
19.3	An Open Extension Problem . . . . .	483
19.4	The Signal Processing Perspective . . . . .	485
19.5	Exercises . . . . .	492
<b>20</b>	<b>Generalized Shift-Invariant Systems in <math>L^2(\mathbb{R}^d)</math></b>	<b>493</b>
20.1	Analysis in $\mathbb{R}^d$ and Notation . . . . .	494
20.2	The Case of One Generator . . . . .	497
20.3	Frames with Multiple Generators . . . . .	501
20.4	Dual Pairs of Frames with Multiple Generators . . . . .	503
20.5	Gabor Systems in $L^2(\mathbb{R}^d)$ . . . . .	507
20.6	Wavelet Systems in $L^2(\mathbb{R}^d)$ . . . . .	511
20.7	Exercises . . . . .	516
<b>21</b>	<b>Frames on Locally Compact Abelian Groups</b>	<b>519</b>
21.1	LCA Groups . . . . .	521
21.2	Fourier Analysis on LCA Groups . . . . .	526

21.3	Gabor Systems on LCA Groups . . . . .	530
21.4	Basic Frame Calculations in $L^2(\widehat{G})$ . . . . .	532
21.5	Explicit Gabor Frame Constructions in $L^2(\widehat{G})$ . . . . .	537
21.6	GSI Systems on LCA Groups . . . . .	544
21.7	Generalized Translation-Invariant Systems . . . . .	548
21.8	Co-compact Gabor Systems . . . . .	554
21.9	Exercises . . . . .	556
<b>22</b>	<b>Perturbation of Frames</b>	<b>557</b>
22.1	A Paley–Wiener Theorem for Frames . . . . .	558
22.2	Compact Perturbation . . . . .	565
22.3	Perturbation of Frame Sequences . . . . .	567
22.4	Perturbation of Gabor frames . . . . .	570
22.5	Perturbation of Wavelet Frames . . . . .	573
22.6	Perturbation of the Haar Wavelet . . . . .	574
22.7	Exercises . . . . .	574
<b>23</b>	<b>Approximation of the Inverse Frame Operator</b>	<b>577</b>
23.1	The First Approach . . . . .	578
23.2	The Casazza–Christensen Method . . . . .	582
23.3	Convergence Estimates for Localized Frames . . . . .	589
23.4	Applications to Gabor Frames . . . . .	591
23.5	Integer Oversampled Gabor Frames . . . . .	594
23.6	The Finite Section Method . . . . .	595
23.7	The Finite Section Method for Gabor Frames . . . . .	598
23.8	Exercises . . . . .	599
<b>24</b>	<b>Expansions in Banach Spaces</b>	<b>601</b>
24.1	Representations of Locally Compact Groups . . . . .	602
24.2	Feichtinger–Gröchenig Theory . . . . .	606
24.3	Banach Frames . . . . .	611
24.4	$p$ -frames . . . . .	616
24.5	Gabor Systems and Wavelets in $L^p(\mathbb{R})$ and Related Spaces . . . . .	619
24.6	Exercises . . . . .	620
<b>A</b>	<b>Appendix</b>	<b>623</b>
A.1	Linear Algebra . . . . .	623
A.2	Integration . . . . .	624
A.3	Locally Compact Groups . . . . .	625
A.4	Some Infinite-Dimensional Vector Spaces . . . . .	626
A.5	Modulation Spaces . . . . .	627
A.6	Feichtinger’s algebra $\mathcal{S}_0$ . . . . .	629
A.7	Some Special Functions . . . . .	632

A.8	B-Splines . . . . .	633
A.9	Exponential B-Splines . . . . .	639
A.10	Splines on Locally Compact Abelian Groups . . . . .	641
A.11	Notes . . . . .	643
