

Contents

- 1 Introduction 1**
 - 1.1 Motivation of Heterogeneous Vehicular Networks 1
 - 1.1.1 DSRC..... 2
 - 1.1.2 Cellular Networks for Vehicular Communications..... 3
 - 1.1.3 Motivation of Heterogeneous Vehicular Networks..... 3
 - 1.2 User Cases and Requirements for Safety and Non-Safety
Related Services..... 3
 - 1.2.1 Safety-Related Services and User Cases..... 4
 - 1.2.2 Non-Safety Related Services and User Cases 4
 - 1.3 Aim of the Monograph..... 7
 - References 7
- 2 Architecture of Heterogeneous Vehicular Networks 9**
 - 2.1 Background..... 9
 - 2.2 Framework of Heterogeneous Vehicular Networks 9
 - 2.3 V2I Communications 11
 - 2.3.1 Cellular-Network-Based V2I Communications 11
 - 2.3.2 DSRC-Based V2I Communications 15
 - 2.4 V2V Communications 17
 - 2.4.1 LTE D2D-Based V2V Communications..... 17
 - 2.4.2 DSRC-Based V2V Communications 18
 - 2.5 Typical Application Scenarios..... 19
 - 2.5.1 Urban Intersection Scenario 19
 - 2.5.2 Expressway Scenario 20
 - 2.6 Summary 21
 - References 22
- 3 Efficient MAC Mechanisms for Heterogeneous Vehicular Networks ... 25**
 - 3.1 Channel Access Protocols in Vehicular Networks..... 25
 - 3.1.1 EDCA in IEEE 802.11p 26
 - 3.1.2 Channel Switch in IEEE 1609.4 26

3.1.3	Improved Multi-channel Access Schemes for Vehicular Networks	28
3.1.4	Summary	30
3.2	Broadcast/Multicast Protocols	31
3.2.1	eMBMS in LTE	31
3.2.2	Challenges and Solutions for eMBMS in LTE	31
3.2.3	Broadcast Protocols in DSRC	32
3.2.4	Improved Broadcast Protocols for DSRC	33
3.2.5	Summary	35
3.3	Location-Based Channel Congestion Control Mechanism	36
3.3.1	Location Segmentation	36
3.3.2	Improved SCH Intervals Structure	37
3.3.3	Section-to-EAW Mapping	37
3.3.4	Modified CSMA/CA Scheme	38
3.3.5	Frame Structure for ECA	39
3.3.6	Performance Analysis	40
3.3.7	Summary	42
3.4	Insights and Discussions	43
	References	44
4	Resource Allocation in Heterogeneous Vehicular Networks	47
4.1	Related Work	47
4.2	Content-Based Resource Scheduling Mechanism	49
4.2.1	System Model	50
4.2.2	Traffic Model	52
4.2.3	Analysis on Contented-Based Scheduling Scheme	53
4.2.4	Performance Analysis	56
4.3	Bipartite Graph-Based Cooperative Resource Allocation Mechanism	59
4.3.1	System Model and Formulation	60
4.3.2	Solution of the Optimization Problem	65
4.3.3	Performance Analysis	68
4.4	Summary	75
	References	75
5	Conclusion and Outlook	79
5.1	Conclusion	79
5.2	Future Research Directions	79
	References	81

Heterogeneous Vehicular Networks

Zheng, K.; Zhang, L.; Xiang, W.; Wang, W.

2016, XI, 82 p. 32 illus., 18 illus. in color., Softcover

ISBN: 978-3-319-25620-7
