

Contents

1	Introduction.	1
1.1	Gravitational Wave Physics	1
1.2	Gravitational Waves in Linearized General Relativity	3
1.3	Gravitational Wave Astronomy and Sources	5
1.4	Gravitational Wave Detectors.	7
1.4.1	Bar Detectors.	8
1.4.2	Ground Based Interferometers	8
1.4.3	Space-Borne Interferometers	11
1.4.4	Pulsar Timing Array	14
1.4.5	Doppler Tracking	14
1.4.6	High Frequency Detectors	14
1.5	Gravitational Wave Data Analysis	15
1.5.1	The General Problem in Astrophysical Data Analysis	15
1.5.2	Properties of a Random Process	16
1.5.3	Detector Responses.	17
1.5.4	Detection Statistic.	22
1.5.5	Matched Filtering.	23
1.5.6	Parameter Estimation	25
	References	28
2	LISA Data Processing Chain	33
2.1	Introduction.	33
2.2	Simulating the Whole LISA Data Processing Chain	34
2.2.1	LISA Orbits Simulator	34
2.2.2	Simulating GWs.	35
2.2.3	Simulating Measurements	36
2.2.4	Down Link	37
2.2.5	Pre Data Processing	37

2.2.6	TDI Simulation	38
2.2.7	Astrophysical Data Analysis	38
	References	38
3	Applying the Kalman Filter to a Simple Case	41
3.1	Introduction	41
3.2	Kalman Filter	41
3.3	A GPS Example.	44
3.4	The LISA Case	44
3.5	Simulation Results	45
	References	47
4	The Inter-spacecraft Measurements	49
4.1	Introduction.	49
4.2	The Inter-spacecraft Measurements.	50
4.3	Formulation of the Measurements.	51
	References	55
5	Design a Hybrid Extended Kalman Filter for the Entire LISA Constellation	57
5.1	Introduction.	57
5.2	The Hybrid Extended Kalman Filter.	57
5.3	Kalman Filter Model for LISA.	59
5.4	Simulation Results	62
5.5	Discussions	71
5.6	Supplementary A: A Limitation on the Common Clock Drift	72
5.7	Supplementary B: A Proof of the Optimality	73
	References	74
6	Alternative Kalman Filter Models.	75
6.1	Introduction.	75
6.2	A Kalman Filter Model with a 23 Dimensional State Vector	75
6.3	A Kalman Filter Model with a 22 Dimensional State Vector	77
6.4	A Simplified Kalman Filter Model with Only Clock Variables.	79
6.5	Summary	81
7	Broken Laser Links and Robustness.	83
7.1	Introduction.	83
7.2	Sequential Kalman Filtering.	84
7.2.1	Sequential Kalman Filter Formulation.	84
7.2.2	Classic LISA with Broken Links, eLISA-like Configuration, and GRACE-like Configuration.	85

7.3	Square-Root Sequential Kalman Filtering	91
7.3.1	Square Root Kalman Filter Formulation	91
7.3.2	Simulation Results	95
7.4	Summary	96
	References	97
8	Optimal Filtering for LISA with Effective System Models	99
8.1	Introduction	99
8.2	A Periodic System Model	100
8.3	An Effective System Model	103
8.4	Improving the Estimates by Using Posterior Measurements	106
	References	110
9	Clock Noise and Disordered Measurements	111
9.1	Introduction	111
9.2	Clock Noise with Power a Law Decay LSD	112
9.2.1	Frequency Noise with a $1/\nu$ Slope	112
9.2.2	Clock Noise LSD with a Higher-Order Decay	113
9.3	Measure and Characterize Laboratory Clock Noise	114
9.3.1	Measured Clock Noise	114
9.3.2	Characterizing and Modelling the Clock Noise	116
9.3.3	Generating Clock Noise with Given LSD	119
9.3.4	Kalman Filters for the Clock Noise	122
9.3.5	Iterative Kalman Filter with a Fitted Clock Noise Model	126
9.4	Disordered LISA Measurements	127
9.4.1	Effects of the Clock Noise on the Time Stamps	128
9.4.2	Performances of the Designed Algorithms	129
9.4.3	Properties of the Jittering Time Stamps	131
9.4.4	Hybrid Interpolated Filters	134
9.5	Supplementary A: Calculation of the Zeros from the Residues and Poles	136
9.6	Supplementary B: A Proof of the Clock Model	137
	References	138
10	Octahedron Configuration for a Displacement Noise-Canceling Gravitational Wave Detector in Space	139
10.1	Introduction	139
10.2	Orbits	143
10.3	Measurements and Noise-Canceling Combinations	144
10.4	Response Functions and Sensitivity	147
10.4.1	Shot Noise Level and Noise Transfer Function	148
10.4.2	GW Signal Transfer Function and Sensitivity	150
10.4.3	General Performance of the DFI Scheme	153

10.4.4	Technological Feasibility	155
10.4.5	Shot-Noise Reduction	156
10.5	Scientific Perspectives	157
10.5.1	Coalescing Compact Binaries	158
10.5.2	Stochastic Background	160
10.5.3	Testing Alternative Theories of Gravity	161
10.5.4	Pulsars—Continuous Waves	164
10.5.5	Other Sources	166
10.6	Summary and Outlook	167
10.7	Supplementary A: Details on Calculating the Displacement and Laser Noise Free Combinations	169
	References	171
11	EMRI Data Analysis with a Phenomenological Waveform	175
11.1	Introduction	175
11.2	Review of EMRI Waveforms	178
11.3	EMRI Phenomenological Waveform Family	179
11.3.1	Phenomenological Waveform in the Source Frame	179
11.3.2	From the Source Frame to the LISA Frame	181
11.3.3	Data Analysis with Phenomenological Waveform	182
11.4	Search with the Phenomenological Waveform	186
11.5	Analysis of the Search Results and Mapping to the Physical Parameters	190
11.5.1	Clustering Algorithms	191
11.5.2	Search for Physical Parameters	195
11.6	Summary	198
11.7	Supplementary A: Calculate the Evolution of the Fundamental Frequencies of EMRIs and Numerical Kludge waveforms	200
	References	203
12	Fast Detection and Automatic Parameter Estimation of a Gravitational Wave Signal with a Novel Method	205
12.1	Introduction	205
12.2	Review of the GW Data Analysis Problem	206
12.3	The New Algorithm	207
12.4	Simulation	208
12.5	Features of the Algorithm	209
12.6	Improve the Performance of the Algorithm	213
12.7	Conclusion and Future Work	214
