

# Contents

<b>1</b>	<b>Introduction</b>	1
1.1	Atom-Photon Interaction	1
1.2	A Deterministic Interaction Mechanism Based on CQED	3
	References	6
<b>2</b>	<b>Controlling the Position and Motion of a Single Atom in an Optical Cavity</b>	11
2.1	Trapping Atoms in a Cavity	11
2.1.1	Optical Dipole Traps	12
2.1.2	Techniques to Control the Position and Motion of Atoms in a Cavity	14
2.2	Implementation of a 3D Optical Lattice in a Cavity	15
2.3	Deterministic Localization of a Single Atom at the Center of the Resonator	19
2.4	Sideband Spectroscopy and Ground-State Cooling	21
	References	25
<b>3</b>	<b>Measurement and Control of the Internal Atomic State</b>	29
3.1	State Initialization and State Detection	29
3.2	Raman Control of the Internal Atomic State	31
3.2.1	Laser Setup	31
3.2.2	Raman Coupling for Different Laser Polarizations	33
3.2.3	Selective Addressing of Individual Zeeman States	34
3.2.4	Atomic State Rotations	37
	References	41
<b>4</b>	<b>Controlled Phase Gate Mechanism</b>	43
4.1	Working Principle	43
4.2	Bandwidth	46
	References	49

<b>5</b>	<b>Nondestructive Detection of an Optical Photon . . . . .</b>	<b>51</b>
5.1	Introduction . . . . .	51
5.2	Characterization Measurements . . . . .	53
5.3	Nondestructive Photon Detection . . . . .	53
5.4	Calculation of the Unconditional Detection Efficiency . . . . .	55
5.5	Analysis of Experimental Imperfections . . . . .	57
	References . . . . .	57
<b>6</b>	<b>A Quantum Gate Between a Flying Optical Photon and a Single Trapped Atom . . . . .</b>	<b>59</b>
6.1	Introduction . . . . .	59
6.2	CNOT Truth Table . . . . .	61
6.3	Atom-Photon Entanglement. . . . .	62
6.4	Experimental Imperfections. . . . .	63
6.5	Atom-Photon-Photon and Photon-Photon Entanglement . . . . .	64
	References . . . . .	66
<b>7</b>	<b>Summary and Outlook. . . . .</b>	<b>69</b>
	References . . . . .	70

A Controlled Phase Gate Between a Single Atom and an  
Optical Photon

Reiserer, A.

2016, XIII, 72 p. 28 illus., Hardcover

ISBN: 978-3-319-26546-9
