

# Contents

<b>1</b>	<b>Introduction</b> . . . . .	<b>1</b>
	Matteo Bianchi and Alessandro Moscatelli	
<b>Part I Neuroscience</b>		
<b>2</b>	<b>Dexterous Manipulation: From High-Level Representation to Low-Level Coordination of Digit Forces and Positions</b> . . . . .	<b>9</b>
	Qiushi Fu and Marco Santello	
<b>3</b>	<b>Digit Position and Force Synergies During Unconstrained Grasping</b> . . . . .	<b>29</b>
	Abdeldjalil Naceri, Marco Santello, Alessandro Moscatelli and Marc O. Ernst	
<b>4</b>	<b>The Motor Control of Hand Movements in the Human Brain: Toward the Definition of a Cortical Representation of Postural Synergies</b> . . . . .	<b>41</b>
	Andrea Leo, Giacomo Handjaras, Hamal Marino, Matteo Bianchi, Pietro Pietrini and Emiliano Ricciardi	
<b>5</b>	<b>Synergy Control in Subcortical Circuitry: Insights from Neurophysiology</b> . . . . .	<b>61</b>
	Henrik Jörntell	
<b>6</b>	<b>Neuronal “Op-amps” Implement Adaptive Control in Biology and Robotics</b> . . . . .	<b>69</b>
	Martin Nilsson	
<b>7</b>	<b>Sensorymotor Synergies: Fusion of Cutaneous Touch and Proprioception in the Perceived Hand Kinematics</b> . . . . .	<b>87</b>
	Alessandro Moscatelli, Matteo Bianchi, Alessandro Serio, Antonio Bicchi and Marc O. Ernst	

## Part II Robotics, Models and Sensing Tools

<b>8</b>	<b>From Soft to Adaptive Synergies: The Pisa/IIT SoftHand . . . . .</b>	<b>101</b>
	Manuel G. Catalano, Giorgio Grioli, Edoardo Farnioli, Alessandro Serio, Manuel Bonilla, Manolo Garabini, Cristina Piazza, Marco Gabiccini and Antonio Bicchi	
<b>9</b>	<b>A Learn by Demonstration Approach for Closed-Loop, Robust, Anthropomorphic Grasp Planning . . . . .</b>	<b>127</b>
	Minas V. Liarokapis, Charalampos P. Bechlioulis, George I. Boutselis and Kostas J. Kyriakopoulos	
<b>10</b>	<b>Teleimpedance Control: Overview and Application . . . . .</b>	<b>151</b>
	Arash Ajoudani, Sasha B. Godfrey, Nikos Tsagarakis and Antonio Bicchi	
<b>11</b>	<b>Incremental Learning of Muscle Synergies: From Calibration to Interaction . . . . .</b>	<b>171</b>
	Claudio Castellini	
<b>12</b>	<b>How to Map Human Hand Synergies onto Robotic Hands Using the SynGrasp Matlab Toolbox . . . . .</b>	<b>195</b>
	Gionata Salvietti, Guido Gioioso, Monica Malvezzi and Domenico Prattichizzo	
<b>13</b>	<b>Quasi-Static Analysis of Synergistically Underactuated Robotic Hands in Grasping and Manipulation Tasks . . . . .</b>	<b>211</b>
	Edoardo Farnioli, Marco Gabiccini and Antonio Bicchi	
<b>14</b>	<b>A Simple Model of the Hand for the Analysis of Object Exploration . . . . .</b>	<b>235</b>
	Vonne van Polanen, Wouter M. Bergmann Tiest and Astrid M.L. Kappers	
<b>15</b>	<b>Synergy-Based Optimal Sensing Techniques for Hand Pose Reconstruction . . . . .</b>	<b>259</b>
	Matteo Bianchi, Paolo Salaris and Antonio Bicchi	

Human and Robot Hands

Sensorimotor Synergies to Bridge the Gap Between  
Neuroscience and Robotics

Bianchi, M.; Moscatelli, A. (Eds.)

2016, XI, 283 p. 97 illus., 31 illus. in color., Hardcover

ISBN: 978-3-319-26705-0
