1	Introduction	1
	References	7
2	Non-convex Region Description by Hyperplane Arrangements	11
2.1	Hyperplane Arrangements	11
2.1.1	Region Counting	14
2.1.2	Parametrized Hyperplane Arrangements	15
2.2	Polyhedral and Zonotopic Sets	18
2.2.1	Polyhedral Sets	18
2.2.2	Zonotopic Sets	21
2.3	Non-convex Region Description	22
2.3.1	Cell Merging	23
2.3.2	Numerical Considerations	29
2.4	Notes and Comments	32
	References	32
3	Mixed-Integer Representations	35
3.1	Classical Formulation	35
3.2	Analysis of the Unallocated Tuples	37
3.2.1	Geometric Approach	38
3.2.2	Algebraic Approach	39
3.3	The Complement of a Union of Convex Sets	44
3.4	Description of the Feasible Region as Union of Feasible Cells	47
3.5	Description of the Feasible Region Directly Through the Arrangement	51
3.6	Numerical Considerations	52
3.7	Notes and Comments	55
	References	56
4	Control Problems Involving Mixed-Integer Decision Making	57
4.1	Multi-agent Collision Avoidance Problems	58
4.2	Extensions for Multi-agent Motion Planning	64

4.2.1	Shadow Region Description	65
4.2.2	Mixed-Integer Representations	68
4.2.3	Coverage Problem	73
4.2.4	Corner Cutting Problem	74
4.3	Reference Governor Mechanism for Guaranteed Fault Detection	77
4.3.1	Output-Based Residual Case	79
4.3.2	Finite Window Residual Case	82
4.4	Notes and Comments	87
	References	87
5	Conclusions	91
	References	93
