

Contents

1	Mathematical Modeling and PDEs	1
1.1	The Elastic String	1
1.2	The Elastic Beam	10
1.3	The Elastic Membrane	12
1.4	The Transport Equation	18
1.5	The Vibrating String Equation	22
1.6	The Wave Equation	26
1.7	The Heat Equation	27
1.8	The Schrödinger Equation	30
1.9	The Black and Scholes Equation	31
1.10	A Rough Classification of PDEs	33
1.11	What Comes Next	34
2	The Finite Difference Method for Elliptic Problems	35
2.1	Approximating Derivatives by Differential Quotients	35
2.2	Application to a One-Dimensional Model Problem	38
2.3	Convergence of the Finite Difference Method	41
2.4	Neumann Boundary Conditions	48
2.5	The Two-Dimensional Case	57
2.6	Concluding Remarks	67
3	A Review of Analysis	69
3.1	Basic Hilbert Space Theory	69
3.2	A Few Basic Function Spaces	72
3.3	Regularity of Open Subsets of \mathbb{R}^d	76
3.4	Partitions of Unity	82
3.5	Integration by Parts in Dimension d and Applications	87
3.6	Distributions	90
3.7	Sobolev Spaces	99

3.8	Properties of Sobolev Spaces in One Dimension	105
3.9	Density of Smooth Functions and Trace in Dimension d	108
3.10	A Summary of Important Results	115
4	The Variational Formulation of Elliptic PDEs	117
4.1	Model Boundary Value Problems	117
4.2	Abstract Variational Problems	122
4.3	Application to the Model Problems, and More	126
4.4	General Second Order Elliptic Problems	136
4.5	Concluding Remarks	142
5	Variational Approximation Methods for Elliptic PDEs.	145
5.1	The General Abstract Variational Approximation Scheme	145
5.2	The Finite Element Method in Dimension One	149
5.3	Comparison with the Finite Difference Method	157
5.4	A Fourth Order Example.	159
5.5	Neumann and Fourier Conditions	165
6	The Finite Element Method in Dimension Two	167
6.1	Meshes in 2d.	167
6.2	Rectangular Q_1 Finite Elements	172
6.3	Convergence and Error Estimate for the Q_1 FEM	177
6.4	Assembling the Matrix	183
6.5	General Definition of a Finite Element	189
6.6	Q_2 and Q_3 Finite Elements	191
6.7	Barycentric Coordinates	198
6.8	Triangular P_1 Lagrange Elements	204
6.9	Triangular P_2 Lagrange Elements	209
6.10	An Example of 2d-Computation.	215
7	The Heat Equation.	219
7.1	Overview	219
7.2	The Maximum Principle for the Heat Equation	220
7.3	Construction of a Regular Solution.	222
7.4	Spaces of Hilbert Space-Valued Functions.	230
7.5	Energy Estimates, Stability, Uniqueness	234
7.6	Variational Formulation and Existence of Weak Solutions.	237
7.7	The Heat Equation on \mathbb{R}	245
8	The Finite Difference Method for the Heat Equation	253
8.1	The Explicit Euler Three Point Finite Difference Scheme for the Heat Equation	253
8.2	The Implicit Euler and Leapfrog Schemes	259
8.3	General Finite Difference Schemes, Consistency, Stability, Convergence	260
8.4	General Criteria for Stability	269
8.5	Stability for One Time Step Schemes in the $2, h$ Norms	273

8.6	Stability via the Discrete Fourier Transform.	282
8.7	Stability via Fourier Series	286
8.8	Stability via the Continuous Fourier Transform	292
8.9	The Crank–Nicolson Scheme, Stability via the Energy Method	296
8.10	Other Approximations of the Heat Equation	302
9	The Wave Equation	307
9.1	Regular Solutions of the Wave Equation.	307
9.2	Variational Formulation and Existence of Weak Solutions.	313
9.3	The Wave Equation on \mathbb{R}	317
9.4	Finite Difference Schemes for the Wave Equation	320
9.5	Stability via the Fourier Approach	327
9.6	For a Few Schemes More	341
9.7	Concluding Remarks	344
10	The Finite Volume Method	345
10.1	The Elliptic Case in One Dimension.	345
10.2	The Transport Equation in One Dimension	351
10.3	Finite Volumes for the Transport Equation	354
10.4	Explicit Three Point Schemes	361
10.5	Examples of Linear Schemes.	370
10.6	Generalizations to Discontinuous Data and Nonlinear Problems.	372
10.7	The Transport Equation in an Open Set in Higher Dimensions.	375
10.8	Finite Volumes for the Transport Equation in Two Dimensions	377
	References	383
	Index	387

Partial Differential Equations: Modeling, Analysis and
Numerical Approximation

Le Dret, H.; Lucquin, B.

2016, XI, 395 p. 140 illus., 119 illus. in color., Hardcover

ISBN: 978-3-319-27065-4
