

Contents

1	Non-Archimedean Valued Fields	1
1.1	Valuation	1
1.1.1	Definitions and First Properties	1
1.1.2	The Topology Induced by a Valuation on \mathbb{K}	5
1.1.3	Non-Archimedean Valuations	8
1.1.4	Some Analysis on a Complete Non-Archimedean Valued Field	13
1.1.5	The Order Function for a Discrete Valuation	15
1.2	Examples	16
1.2.1	Examples of Archimedean Valuation	16
1.2.2	Examples of Non-Archimedean Valued Fields	17
1.3	Additional Properties of Non-Archimedean Valued Fields	28
1.4	Some Remarks on Krull Valuations	36
1.5	Bibliographical Notes	39
2	Non-Archimedean Banach Spaces	41
2.1	Non-Archimedean Norms	41
2.2	Non-Archimedean Banach Spaces	44
2.3	Free Banach Spaces	50
2.4	The p -adic Hilbert Space \mathbb{E}_ω	54
2.5	Bibliographical Notes	60
3	Bounded Linear Operators in Non-Archimedean Banach Spaces	61
3.1	Bounded Linear Operators	61
3.1.1	Definitions and Examples	61
3.1.2	Basic Properties	64
3.1.3	Bounded Linear Operators in Free Banach Spaces	65
3.2	Additional Properties of Bounded Linear Operators	67
3.2.1	The Inverse Operator	67

3.2.2	Perturbations of Orthogonal Bases Using the Inverse Operator	68
3.2.3	The Adjoint Operator	73
3.3	Finite Rank Linear Operators	75
3.3.1	Basic Definitions	75
3.3.2	Properties of Finite Rank Operators	75
3.4	Completely Continuous Linear Operators	77
3.4.1	Basic Properties	77
3.4.2	Completely Continuous Linear Operators on \mathbb{E}_ω	77
3.5	Bounded Fredholm Linear Operators	78
3.5.1	Definitions and Examples	78
3.5.2	Properties of Fredholm Operators	79
3.6	Spectral Theory for Bounded Linear Operators	81
3.6.1	The Spectrum of a Bounded Linear Operator	81
3.6.2	The Essential Spectrum of a Bounded Linear Operator	82
3.7	Bibliographical Notes	84
4	The Vishik Spectral Theorem	85
4.1	The Shnirel'man Integral and Its Properties	85
4.1.1	Basic Definitions	85
4.1.2	The Shnirel'man Integral	91
4.2	Distributions with Compact Support	96
4.3	Cauchy–Stieltjes and Vishik Transforms	98
4.4	Analytic Bounded Linear Operators	102
4.5	Vishik Spectral Theorem	104
4.6	Bibliographical Notes	105
5	Spectral Theory for Perturbations of Bounded Diagonal Linear Operators	107
5.1	Spectral Theory for Finite Rank Perturbations of Diagonal Operators	107
5.1.1	Introduction	107
5.1.2	Spectral Analysis for the Class of Operators $T = D + K$...	109
5.1.3	Spectral Analysis for the Class of Operators $T = D + F$...	112
5.2	Computation of $\sigma_e(D)$	115
5.3	Spectrum of $T = D + F$	118
5.4	Examples	118
5.5	Bibliographical Notes	121
6	Unbounded Linear Operators	123
6.1	Unbounded Linear Operators on a Non-archimedean Banach Space	123
6.2	Closed Linear Operators	124
6.3	The Spectrum of an Unbounded Operator	126
6.4	Unbounded Fredholm Operators	127
6.5	Bibliographical Notes	129

7 Spectral Theory for Perturbations of Unbounded Linear Operators ..	131
7.1 Introduction	131
7.2 Spectral Analysis for the Class of Operators $T = D + K$	132
7.3 Spectral Analysis for the Class of Operators $T = D + F$	133
7.4 Computation of $\sigma_e(D)$	135
7.5 Main Result	138
7.6 Bibliographical Notes	139
A The Shnirel'man Integral	141
A.1 Distributions with Compact Support	146
A.2 Cauchy-Stieltjes and Vishik Transforms	149
References	151
Index	155
