

Contents

1	Why Polymer Gel?	1
1.1	What Is Polymer Gel?	1
1.2	Chemical Gel, Physical Gel, and Biological Gel	2
1.3	Living Organism Consists of Hydrogels	4
	References	5
2	Why Cytoskeletal Gel?	7
2.1	Self-Assembly and Dynamic Structure of Cytoskeletal Filaments	7
2.1.1	Actin	8
2.1.2	Microtubule	8
2.1.3	Tropomyosin	11
2.2	Multi-Scale Hierarchy: Origin of Emergence	12
2.3	Cytoskeletal Protein Gels: Multi-Scale Hierarchical Supra-Macromolecular Gel (MHSMG)	13
2.3.1	Actin Gel	13
2.3.2	Microtubule Gel	15
2.4	Bio-Motor Gel with Emergent Function	16
	References	18
3	Actin Gel	21
3.1	Preparation of Actin Gel	21
3.1.1	Preparation of Acetone Powder of Striated Muscle	21
3.1.2	Extraction of Actin from Acetone Powder	22
3.1.3	Gelation of Actin	23
3.2	Emergent Functions of Actin Gel	25
3.2.1	Mechanical Property	25
3.2.2	Reversible Sol–Gel Transition	27
3.2.3	Self-Healing Function	27
3.2.4	Autonomous Oscillation	31
	References	33

4	Microtubule Gel	35
4.1	Preparation of Microtubule Gel	35
4.1.1	Tubulin Purification	35
4.1.2	MT Gel Formation by Cross-Linking	37
4.2	Supramolecular Structure of Microtubule Gel.....	40
4.2.1	Direct Observation of MT Network.....	40
4.2.2	Mechanical Property	41
4.2.3	Reversible Sol–Gel Transition	43
4.3	Emergent Functions as Protein Gel Motors	45
4.3.1	Motility Assay of MT Gel.....	45
4.3.2	Enhanced Motion of MT Gel.....	49
4.3.3	Role of Cross-Linkage on MT Gel Motility	53
4.4	Specific Assembly Processes of Chemically Modified Tubulin	54
4.4.1	Photo-Enhanced Polymerization of Ru(bpy) ₃ ²⁺ -Tubulin Conjugate.....	54
4.4.2	Teardrop Pattern Formation of MTs in a Hydrodynamic Flow.....	55
	References.....	56
5	Tropomyosin Gel	59
5.1	Preparation of Tropomyosins.....	59
5.1.1	Preparation of Tropomyosin from Striated Muscle	59
5.1.2	Preparation of Recombinant Tropomyosin	60
5.1.3	Gelation of Tropomyosin.....	61
5.1.4	Cell-Penetrating Assay of Tropomyosin Derivatives.....	62
5.2	pH Responsive Swelling and Contracting Behaviors of Tropomyosin Gel	63
5.2.1	pH Response of Tropomyosin Gel.....	63
5.3	Superior Cell Penetration of Tropomyosin Derivatives	64
5.3.1	Design of Coiled-Coil Cell-Penetrating Proteins.....	64
5.3.2	Cell-Penetrating Activity of Tropomyosin Derivatives	65
5.3.3	Effect of Molecular Length on Cell Penetration.....	66
5.3.4	Cell-Penetrating Activity of Non-cationic Tropomyosin Derivatives	67
	References.....	69
6	Summary of the MHSMG	71
7	Biomimetic Functions of Synthetic Polymer Gels.....	73
7.1	Soft and Wet Artificial Muscles	73
7.2	Shape Memory Gel	75
7.3	Chemical Motor	75
7.4	Strong Hydrogels with Extremely Low Friction.....	75
7.5	Electroconductive Hydrogel	76
7.6	Tunable Photonic Crystal.....	77
	References.....	78

Hydrogels of Cytoskeletal Proteins

Preparation, Structure, and Emergent Functions

Osada, Y.; Kawamura, R.; Sano, K.-I.

2016, XII, 79 p. 39 illus., 35 illus. in color., Hardcover

ISBN: 978-3-319-27375-4
