
Contents

1	Introduction	1
1.1	Leningrad—1982	1
1.2	‘Global Warming’ or ‘Global Weirding’	3
1.3	My Background	4
1.4	What Is Science?	7
1.5	The Observational Sciences	9
1.6	The Complexity of Nature	10
1.7	Summary	10
2	The Language of Science	17
2.1	Numbers and Symbols	17
2.2	Arithmetic, Algebra, and Calculus	20
2.3	Orders of Magnitude and Exponents	21
2.4	Logarithms	23
2.5	Logarithms and Scales with Bases Other than 10	24
2.6	Earthquake Scales	24
2.7	The Beaufort Wind Force Scale	26
2.8	Extending the Beaufort Scale to Cyclonic Storms	27
2.9	Calendars and Time	29
2.10	Summary	34
3	Applying Mathematics to Problems	45
3.1	Measures and Weights	45
3.2	The Nautical Mile	46
3.3	The Metric System	47
3.4	Temperature	47
3.5	Precisely Defining Some Words You Already Know	48
3.6	Locating Things	54
3.7	Latitude and Longitude	56
3.8	Map Projections	56
3.9	Trigonometry	58
3.10	Circles and Angular Velocity	60
3.11	Centripetal and Centrifugal Forces	61
3.12	Exponential Growth and Decay	64
3.13	The Logistic Equation	66
3.14	Graphs	67
3.15	Statistics	68
3.16	Summary	69
4	Geologic Time	77
4.1	Age of the Earth—4004 BCE, or Older?	77
4.2	The Discovery of the Depths of Time—Eternity	78
4.3	Geologic Time Punctuated by Revolutions	79
4.4	Catastrophism Replaced by Imperceptibly Slow Gradual Change	82
4.5	The Development of the Geological Time Scale	84

4.6	The Discovery of the Ice Age	86
4.7	The Discovery of Past Warm Polar Regions	88
4.8	Throwing a Monkey Wrench into Explaining Climate Change	89
4.9	‘Crustal Mobility’ to the Rescue	89
4.10	The Return of Catastrophism and the Idea of Rapid Change	90
4.11	The Nature of the Geologic Record	91
4.12	The Great Extinctions and Their Causes	92
4.13	Summary	93
5	Putting Numbers on Geologic Ages	105
5.1	1788—An Abyss of Time of Unknown Dimensions	105
5.2	1863—Physics Comes to the Rescue—Earth Is not More Than 100 Million Years Old	105
5.3	What We Now Know About Heat from Earth’s Interior	106
5.4	Some Helpful Background In Understanding 19th Century Chemistry	107
5.5	Atomic Weight, Atomic Mass, Isotopes, Relative Atomic Mass, Standard Atomic Weight—A Confusing Plethora of Terms	109
5.6	1895–1913—The Worlds of Physics and Chemistry Turned Upside Down	112
5.7	Henri Becquerel and the Curies	112
5.8	Nonconformists and the British Universities Open to All	115
5.9	The Discovery of Electrons, Alpha-Rays, and Beta-Rays	117
5.10	The Discovery of Radioactive Decay Series, Exponential Decay Rates, and Secular Equilibrium	118
5.11	The Mystery of the Decay Series Explained by Isotopes	119
5.12	The Discovery that Radioactive Decay Series Might Be Used to Determine the Age of Rocks	120
5.13	The Discovery of Stable Isotopes	122
5.14	Rethinking the Structure of the Atom	122
5.15	From Science to Science Fiction	123
5.16	The Discovery of Protons and Neutrons	124
5.17	Arthur Holmes and the Age of the Earth	127
5.18	The Development of a Numerical Geological Timescale	128
5.19	Summary	129
6	Documenting Past Climate Change	137
6.1	What Is ‘Climate’?	137
6.2	A Brief Overview of Earth’s Climate History	138
6.3	The Cenozoic Climate ‘Deterioration’	144
6.4	From Ages to Process Rates	145
6.5	Radiometric Age Dating in the Mid-20th Century	146
6.6	Potassium—Argon Dating	147
6.7	Reversals of Earth’s Magnetic Field	148
6.8	Fission Track Dating	151
6.9	Astronomical Dating	151
6.10	Tritium, Carbon-14 and Beryllium-10	151
6.11	The Human Acceleration of Natural Process Rates	152
6.12	The Present Climate in Its Geologic Context	153
6.13	Steady State Versus Non-steady State	157
6.14	Feedbacks	158
6.15	Summary	159

7	The Nature of Energy Received from the Sun—The Analogies with Water Waves and Sound	167
7.1	Water Waves	167
7.2	Special Water Waves—Tides and Tsunamis	170
7.3	Wave Energy, Refraction and Reflection	172
7.4	Sound Waves	173
7.5	Sound Waves and Music	173
7.6	Measuring the Speed of Sound in Air	176
7.7	Measuring the Speed of Sound in Water	178
7.8	The Practical Use of Sound in Water	178
7.9	Summary	180
8	The Nature of Energy Received from the Sun—Figuring Out What Light Really Is	185
8.1	Early Ideas About Light	185
8.2	Refraction of Light	185
8.3	Measuring the Speed of Light	187
8.4	The Discovery of Double Refraction or ‘Birefringence’	189
8.5	Investigating the Dispersion of Light	190
8.6	Figuring Out the Wavelengths of Different Colors of Light	192
8.7	Diffraction	193
8.8	Polarization of Light	194
8.9	Eureka!—Light Is Electromagnetic Waves	195
8.10	A Review of the Discovery of the Invisible Parts of the Electromagnetic Spectrum	198
8.11	The Demise of the ‘Luminiferous æther’	198
8.12	Summary	199
9	Exploring the Electromagnetic Spectrum	205
9.1	Spectra and Spectral Lines	205
9.2	The Discovery of Helium—First in the Sun, then on Earth	208
9.3	The Discovery That Spectral Lines Are Mathematically Related	208
9.4	Heinrich Hertz’s Confirmation of Maxwell’s Ideas	209
9.5	Marconi Makes the Electromagnetic Spectrum a Tool for Civilization	210
9.6	Human Use of the Electromagnetic Spectrum for Communication, Locating Objects, and Cooking	212
9.7	Summary	213
10	The Origins of Climate Science—The Idea of Energy Balance	219
10.1	What Is Heat?	219
10.2	Thermodynamics	222
10.3	The Laws of Thermodynamics	223
10.4	The Discovery of Greenhouse Gases	225
10.5	Kirchhoff’s ‘Black Body’	226
10.6	Stefan’s Fourth Power Law	229
10.7	Black Body Radiation	231
10.8	Summary	234
11	The Climate System	241
11.1	An Introduction to the Climate System	241
11.2	Insolation—The Incoming Energy from the Sun	242
11.3	Albedo—The Reflection of Incoming Energy Back into Space	244
11.4	Reradiation—How the Earth Radiates Energy Back into Space	245
11.5	The Chaotic Nature of the Weather	246
11.6	The Earthly Components of the Climate System: Air, Earth, Ice, and Water	250

11.7	The Atmosphere	251
11.8	The Hydrosphere.	252
11.9	The Cryosphere.	253
11.10	The Land	253
11.11	Classifying Climatic Regions	253
11.12	Uncertainties in the Climate Scheme	257
11.13	Summary	257
12	What's at the Bottom of Alice's Rabbit Hole	261
12.1	Max Planck and the Solution to the Black Body Problem.	261
12.2	The Photoelectric Effect.	262
12.3	The Bohr Atom	263
12.4	Implications of the Bohr Model for the Periodic Table of the Elements	267
12.5	The Zeeman Effect	271
12.6	Trying to Make Sense of the Periodic Table.	271
12.7	The Second Quantum Revolution	277
12.8	The Discovery of Nuclear Fission	281
12.9	Molecular Motions	282
12.10	Summary	283
13	Energy From the Sun—Long-term Variations	291
13.1	The Faint Young Sun Paradox	291
13.2	The Energy Flux from the Sun	292
13.3	The Orbital Cycles	295
13.4	The Rise and Fall of the Orbital Theory of Climate Change	298
13.5	The Resurrection of the Orbital Theory	300
13.6	Correcting the Age Scale; Filling in the Details to Prove the Theory . . .	307
13.7	The Discovery that Milankovitch Orbital Cycles Have Affected Much of Earth History.	316
13.8	Summary	321
14	Solar Variability and Cosmic Rays	329
14.1	Solar Variability	329
14.2	The Solar Wind	333
14.3	Solar Storms and Space Weather.	335
14.4	The Solar Neutrino Problem	336
14.5	The Ultraviolet Radiation	336
14.6	Cosmic Rays	337
14.7	A Digression into the World of Particle Physics	340
14.8	How Cosmic Rays Interact with Earth's Atmosphere.	341
14.9	Carbon-14	343
14.10	Beryllium-10	345
14.11	Cosmic Rays and Climate	346
14.12	Summary	347
15	Albedo	355
15.1	Albedo of Planet Earth.	355
15.2	Clouds.	359
15.3	Could Cloudiness Be a Global Thermostat?	363
15.4	Volcanic Ash and Climate Change	364
15.5	Aerosols.	367
15.6	Albedo During the Last Glacial Maximum	369
15.7	Changing the Planetary Albedo to Counteract Greenhouse Warming . . .	370
15.8	Summary	370

16	Air	377
16.1	The Nature of Air	378
16.2	The Velocity of Air Molecules	379
16.3	Other Molecular Motions	379
16.4	The Other Major Component of Air—Photons	382
16.5	Ionization	383
16.6	The Scattering of Light	383
16.7	Absorption of the Infrared Wavelengths	384
16.8	Other Components of Air: Subatomic Particles	385
16.9	Summary	386
17	HOH—The Keystone of Earth’s Climate	391
17.1	Some History	391
17.2	Why Is HOH so Strange?	391
17.3	The Hydrologic Cycle	396
17.4	Vapor	397
17.5	Pure Water	397
17.6	Natural Water	401
17.7	Water—Density and Specific Volume	403
17.8	Water—Surface Tension	404
17.9	Ice	405
17.10	Earth’s Ice	406
17.11	How Ice Forms from Fresh Water and from Seawater	409
17.12	Snow and Ice on Land	410
17.13	Ice Cores	414
17.14	Ice as Earth’s Climate Stabilizer	416
17.15	Summary	417
18	The Atmosphere	423
18.1	Atmospheric Pressure	423
18.2	The Structure of the Atmosphere	423
18.3	The Troposphere	425
18.4	The Stratosphere	425
18.5	The Mesosphere	425
18.6	The Thermosphere	426
18.7	The Exosphere	426
18.8	The Magnetosphere	426
18.9	The Ionosphere	427
18.10	The Atmospheric Greenhouse Effect	428
18.11	The Distribution of Gases in the Atmosphere	430
18.12	The Overall Effect of the Atmosphere on Solar Irradiance	431
18.13	The Effects of Anthropogenic Atmospheric Pollution	432
18.14	Summary	440
19	Oxygen and Ozone—Products and Protectors of Life	445
19.1	Diatomic Oxygen—O ₂ —‘Oxygen’	445
19.2	Triatomic Oxygen—O ₃ —Ozone	448
19.3	The Oxygen-Ozone-Ultraviolet Connection	449
19.4	The Oxygen-Ozone-Ultraviolet Conundrum	451
19.5	The Human Interference with Ozone	452
19.6	Ozone—The Greenhouse Gas	455
19.7	Summary	455
20	Water Vapor—The Major Greenhouse Gas	461
20.1	The Behavior of Dry Air	461
20.2	The Behavior of Wet Air	463
20.3	What Controls Atmospheric Water Vapor?	465

20.4	Anthropogenic Effects	468
20.5	The Changing Area of Exposed Water Surface	468
20.6	Summary	469
21	Carbon Dioxide	475
21.1	Carbon Dioxide as a Greenhouse Gas	476
21.2	The Carbon Cycle	476
21.3	The Very Long-Term Carbon Cycle	477
21.4	Carbon Dioxide During the Phanerozoic	481
21.5	Rethinking the Role of CO ₂ in Climate Change	486
21.6	The Ice Core Record of the Last Half Million Years	490
21.7	The Industrial Era Increase in Atmospheric CO ₂	495
21.8	The Short Term Sinks for Atmospheric CO ₂	499
21.9	Carbon Dioxide Catastrophes	500
21.10	Projections of Future Atmospheric CO ₂ Levels	501
21.11	Summary	501
22	Other Greenhouse gases	507
22.1	Methane—CH ₄	507
22.2	The History of Methane in Earth's Atmosphere.	508
22.3	Methane Clathrates	512
22.4	Methane Trapped in Permafrost.	515
22.5	Nitrous Oxide—N ₂ O	516
22.6	Other Greenhouse gases	519
22.7	Summary	520
23	The Coriolis Effect	525
23.1	The Sun Does not Orbit the Earth, but Earth Rotates 1543–1651	525
23.2	Robert Hooke and Isaac Newton 1674–1686	526
23.3	Explaining the Trade Winds—Halley and Hadley's Ideas 1686–1735	527
23.4	Back to Proving that Earth Rotates 1791–1831	530
23.5	The Ideas of Gaspard-Gustave de Coriolis 1829–1835	536
23.6	The Foucault Pendulum 1851	543
23.7	The Earth is Neither a Disc nor a Sphere	544
23.8	Inertial Circles	545
23.9	William Ferrel Figures It Out 1856–1858	547
23.10	Buys-Ballot's Discovery 1857.	548
23.11	Flow Down a Pressure Gradient	548
23.12	Introduction to the Use of "Coriolis" in Meteorology.	549
23.13	A Mathematical Derivation of the Coriolis Force.	550
23.14	Summary	552
24	The Circulation of Earth's Atmosphere	557
24.1	Why the Earth's Atmosphere and Oceans Circulate	557
24.2	The Geographically Uneven Radiation Balance	559
24.3	The 'Modern' Atmospheric Circulation	559
24.4	The Indian and Southeast Asian Monsoons.	569
24.5	Cyclonic Storms	570
24.6	Tornados	572
24.7	Summary	575
25	The Circulation of Earth's Oceans	579
25.1	The Modern Ocean's General Circulation.	579
25.2	The Global Ocean's Great Conveyor	584
25.3	Upwelling of Waters from the Ocean's Interior to the Surface.	592

25.4	El Niño—La Niña, the Southern Oscillation and the North Atlantic Oscillation	593
25.5	Kelvin Waves	595
25.6	A New Hypothesis: Very Different Atmospheric and Ocean Circulation on the Warm Earth of the Distant Past	596
25.7	The Transition from the ‘Warm Earth’ to the ‘Modern’ Circulation	598
25.8	Summary	599
26	The Biological Interactions	605
26.1	Life on Land	607
26.2	C ₃ and C ₄ Plants	607
26.3	Response of Land Plants to Higher Levels of CO ₂	608
26.4	Response of Land-Based Life to Climate Change	608
26.5	Response of Land Life to Future Climate Change	610
26.6	Life in the Ocean and Seas	611
26.7	Life in the Open Ocean	611
26.8	Life Along Coasts and in Shallow Seas	612
26.9	Marine Life and the CO ₂ Connection	614
26.10	The Role of Plants and Animals in Fixing CaCO ₃	619
26.11	How Does the Organic Matter and CaCO ₃ get to the Sea Floor?	621
26.12	The Acidification of the Ocean	622
26.13	What Are the Effects of Acidification on Marine Animals and Plants?	623
26.14	Atmospheric and Oceanic Circulation, Nutrients and the Carbon Cycle in Other Climate States	624
26.15	Summary	627
27	Sea Level	631
27.1	What Is Sea Level?	631
27.2	Why Does Sea-Level Change Differently in Different Places?	631
27.3	Changing the Volume of Water in the Ocean	631
27.4	Changing the Mass of H ₂ O in the Ocean	632
27.5	Changes in Groundwater Reservoirs	632
27.6	Conversion of Ice to Ocean Water	632
27.7	Storage in Lakes	634
27.8	Effect of Changing the Salinity of the Ocean	634
27.9	Effect of Warming or Cooling the Ocean	634
27.10	Motion of the Earth’s Solid Surface	634
27.11	The Gravitational Attraction of Ice Sheets	638
27.12	Changing the Speed of Earth’s Rotation	639
27.13	Effect of Winds and Atmospheric Pressure Systems	639
27.14	Effect of the Evaporation-Precipitation Balance	640
27.15	Sea Level Change During the Deglaciation	641
27.16	Sea Level During the Holocene	643
27.17	What Has Happened to Sea Level in the Past Few Centuries?	643
27.18	The Global Sea Level Record	645
27.19	Summary	646
28	Global Climate Change—The Geologically Immediate Past	651
28.1	The Climate Changes During the Last Deglaciation	651
28.2	The Sudden Changes Recorded in Ice Cores: Dansgaard-Oeschger Events	657
28.3	The Record of Massive Iceberg Discharges in North Atlantic Deep-Sea and Greenland Ice Cores: The Heinrich Events	662

28.4	What Did the Deglaciation Look like Outside the North Atlantic Region?	663
28.5	Are There Holocene Climate Cycles?	663
28.6	The Hockey Stick Controversy	667
28.7	Summary	670
29	Is There an Analog for the Future Climate?	675
29.1	The Eemian, the Last Interglacial	675
29.2	Sea Level During Older Interglacials	679
29.3	Arctic Sea-Ice During Interglacials	682
29.4	The Paleocene-Eocene Thermal Maximum	683
29.5	Summary	684
30	The Instrumental Temperature Record	689
30.1	The Development of the Thermometer	689
30.2	Keeping Records	691
30.3	The 20th Century Pattern of Temperature Change	694
30.4	Some Examples of Local Temperature Records	694
30.5	Regional Temperature Compilations for the United States	701
30.6	Larger Regional and Global Compilations	705
30.7	Summary	713
31	The Future	721
31.1	Predictions of the Future—Models	722
31.2	What Is Expected in the 21st Century—Human Population	724
31.3	Environmental Variability and Tipping Points	726
31.4	The Anthropogenic Factors Causing the Earth's Climate and Environment to Change	727
31.5	The Reports of the Club of Rome	728
31.6	The Intergovernmental Panel on Climate Change—The 'Official' Scenarios for Future Increases in Greenhouse Gas Concentrations	730
31.7	Comparison of Climate Models Based on SRES and RCP Scenarios	735
31.8	The Kyoto Protocol	737
31.9	A Critique of the IPCC Reports	737
31.10	Summary	737
32	Global and Regional Aspects of Climate Change	743
32.1	The Long Term View	743
32.2	Milankovitch Insolation	743
32.3	The Decline in Arctic Summer Sea Ice	744
32.4	Feedbacks in the Arctic	749
32.5	Arctic Permafrost	754
32.6	The Arctic Tundra and Boreal Forest	756
32.7	The Polar Ice Sheets	756
32.8	The Greenland Ice Sheet	758
32.9	The Antarctic Ice Sheets	759
32.10	Temperature	763
32.11	Sea Level	766
32.12	The Thermohaline Circulation	768
32.13	El Niño and the Southern Oscillation	771
32.14	Ocean Acidification	771
32.15	Anoxia in the Ocean	772
32.16	The Sahara Sahel	772
32.17	Amazonia	774
32.18	Methane Clathrates	774
32.19	Critical Tipping Points	775

32.20	Mother Nature's Remedy	776
32.21	Summary	777
32.22	An Afterthought	777
