

Contents

1	Introduction	1
1.1	Spectral Analysis on the Torus	1
1.2	The Hyperbolic Plane	4
1.3	Hyperbolic Surfaces	11
1.3.1	Fundamental Domains	12
1.3.2	Hyperbolic Laplacian	14
1.4	Description of the Main Results	16
1.4.1	Examples of Hyperbolic Surfaces	16
1.4.2	The Spectral Theorem	18
1.4.3	Maaß Forms	19
1.4.4	The Selberg Trace Formula	20
1.4.5	The Selberg Eigenvalue Conjecture	22
1.4.6	The Jacquet-Langlands Correspondence	23
1.4.7	Arithmetic Quantum Unique Ergodicity	24
1.5	Notation	24
1.6	Remarks and References	25
1.7	Exercises	25
2	Arithmetic Hyperbolic Surfaces	31
2.1	The Space of Lattices	31
2.2	Quaternion Algebras and Arithmetic Groups	35
2.2.1	An Exceptional Isomorphism	37
2.2.2	A Subset of the Space of Lattices	40
2.2.3	The Cocompactness Criterion	40
2.2.4	Commensurability Classes	42
2.3	Arithmetic Hyperbolic Surfaces	43
2.3.1	Eliminating Torsion	44
2.3.2	The Modular Surface and Its Covers	45
2.4	Commentary and References	49
2.5	Exercises	50

3	Spectral Decomposition	53
3.1	The Laplacian	53
3.2	Eigenfunctions of the Laplacian on \mathcal{H}	56
3.2.1	Radial Functions	58
3.3	Invariant Integral Operators on \mathcal{H}	60
3.4	The Selberg Transform	64
3.5	A Family of Examples: The Heat Kernel	67
3.6	The Laplacian on $\Gamma \backslash \mathcal{H}$	70
3.7	Integral Operators on $\Gamma \backslash \mathcal{H}$	73
3.7.1	The Heat Kernel	75
3.7.2	The Non-compact Case	76
3.8	Review of Functional Analysis	81
3.9	Proof of the Spectral Theorem	83
3.10	The Minimax Principle	89
3.10.1	Small Eigenvalues I: Geometric Existence Criterion	91
3.10.2	Small Eigenvalues II: The Selberg Conjecture	93
3.11	Commentary and References	94
3.12	Exercises	96
4	Maaß Forms	99
4.1	Eisenstein Series for $SL(2, \mathbf{Z})$	99
4.1.1	Eisenstein Series and the Riemann Zeta Function I	103
4.2	Eisenstein Series and the Spectrum of the Laplacian	106
4.2.1	Mellin Inversion Formula, Phragmén-Lindelöf Principle	107
4.2.2	The Space of Incomplete Eisenstein Series	110
4.2.3	Regularity of $E(z, s)$ on the Vertical Line $\operatorname{Re}(s) = 1/2$	113
4.2.4	Eisenstein Series and the Riemann Zeta Function II	116
4.2.5	The Eisenstein Transform	118
4.2.6	The Spectral Theorem for the Modular Surface	121
4.3	Existence of Cusp Forms	123
4.3.1	Automorphic Wave Equation	123
4.3.2	Construction of Cusp Forms	125
4.4	Hyperbolic Periods of Eisenstein Series	127
4.4.1	Primitive Geodesics on the Modular Surface	127
4.4.2	Hyperbolic Fourier Series of $E(z, s)$	135
4.5	Explicit Construction of Maaß Forms	138
4.6	Commentary and References	145
4.7	Exercises	149
5	The Trace Formula	153
5.1	The Selberg Trace Formula I: General Framework	153
5.2	The Selberg Trace Formula II: The Case of Compact Surfaces	157
5.2.1	The Pretrace Formula	157

5.2.2	The Geometric Side of the Trace Formula	159
5.2.3	Contribution of Hyperbolic Elements	160
5.2.4	The Trace Formula	162
5.3	The Selberg Trace Formula III: The Case of $SL(2, \mathbf{Z})$	165
5.3.1	The Kernel K_{cont}	167
5.3.2	The Kernel $K - K_{\text{cont}}$	167
5.3.3	The Spectral Side of the Trace Formula	171
5.3.4	The Geometric Side of the Trace Formula: Parabolic Term Contribution	175
5.3.5	The Trace Formula	179
5.4	Applications	181
5.4.1	The Weyl Law	181
5.4.2	The Prime Geodesic Theorem	183
5.5	Comments and References	188
5.6	Exercises	191
6	Multiplicity of λ_1 and the Selberg Conjecture	193
6.1	Point Counting in Arithmetic Lattices	193
6.2	Multiplicity of the First Eigenvalue	196
6.3	Representation Theory of $PSL(2, \mathbf{Z}/p\mathbf{Z})$	205
6.3.1	Review of the Representation Theory of Finite Groups	205
6.3.2	Proof of Theorem 6.8	207
6.4	Lower Bound on the First Non-zero Eigenvalue	210
6.5	Comments and References	211
7	L-Functions and the Selberg Conjecture	213
7.1	The L -Function Attached to a Maaß Form	214
7.2	Hecke Operators and Applications	217
7.2.1	Hecke Operators	217
7.2.2	Atkin-Lehner Theory	221
7.2.3	Multiplicative Properties of Fourier Coefficients	227
7.3	Dirichlet Characters and Twisted Maaß Forms	230
7.3.1	Dirichlet Characters	230
7.3.2	Maaß Forms Twisted by a Character	232
7.3.3	Twisted Eisenstein Series	234
7.4	Rankin-Selberg L -Functions	239
7.5	The Luo-Rudnick-Sarnak Theorem	253
7.6	Bounds on Fourier Coefficients	260
7.7	Comments and References	262
7.8	Exercises	265
8	Jacquet-Langlands Correspondence	267
8.1	Arithmetic of Quaternion Algebras	267
8.1.1	Orders in Quaternion Algebras	267
8.1.2	Orders in Quadratic Extensions of \mathbf{Q}	270
8.1.3	Strong Approximation Theorems	272

8.2	Optimal Embeddings of Quadratic Fields	273
8.3	The Trace Formula	282
8.4	Jacquet-Langlands Correspondence and Applications	286
8.5	Commentary and References	292
9	Arithmetic Quantum Unique Ergodicity	295
9.1	Quantization of the Geodesic Flow	295
9.1.1	The Classical System: The Geodesic Flow	296
9.1.2	Quantum Systems	299
9.1.3	Quantum Mechanics on the Poincaré Upper Half-Plane ...	300
9.2	Microlocal Lift	302
9.2.1	The Microlocal Lift	304
9.2.2	Quantum Ergodicity	308
9.3	First Links with Ergodic Theory	310
9.4	Multiplication by 2 and 3 on the Circle	312
9.4.1	The Circle as a Foliated Space	312
9.4.2	Conditional Measures	313
9.4.3	Recurrence	315
9.4.4	Invariant Measures	317
9.4.5	Entropy	319
9.5	Hecke Operators and Lindenstrauss's Theorem	322
9.5.1	The Tree of $\mathrm{PGL}(2, \mathbf{Q}_p)$	323
9.5.2	Hecke Operators	325
9.5.3	Lindenstrauss's Theorem	326
9.6	Use of Hecke Operators	327
9.6.1	Local Contributions	328
9.6.2	Intersections of Hecke Translates	333
9.6.3	Strongly Positive Entropy	337
9.6.4	T_p -Recurrence	339
9.7	Commentary and References	339
9.8	Exercises	342
 Appendices		
A	Three Coordinate Systems for \mathcal{H}	343
B	The Gamma Function and Bessel Functions	345
C	Elementary Bounds on Hyper-Kloosterman Sums	
	<i>by Valentin Blomer and Farrell Brumley</i>	<i>349</i>
