

Contents

1	Function Spaces	1
1.1	Introduction	1
1.1.1	L^p -Spaces	1
1.1.2	Lebesgue–Bochner Spaces	9
1.1.3	BV-Functions, Absolutely Continuous Functions, Spaces of Measures	15
1.1.4	Sobolev Spaces	30
1.1.5	Auxiliary Notions	42
1.2	Problems	43
1.3	Solutions	85
	Bibliography	255
2	Nonlinear and Multivalued Maps	257
2.1	Introduction	257
2.1.1	Compact, Completely Continuous, and Proper Maps	257
2.1.2	Multifunctions	265
2.1.3	Maximal Monotone Maps and Generalizations	283
2.1.4	Accretive Maps	293
2.1.5	Miscellaneous Results	298
2.2	Problems	300
2.3	Solutions	340
	Bibliography	487
3	Smooth and Nonsmooth Calculus	489
3.1	Introduction	489
3.1.1	Gâteaux and Fréchet Derivatives	489
3.1.2	Convex Functionals and Variational Inequalities	502

3.1.3	Locally Lipschitz Functions	517
3.1.4	Γ -Convergence and Relaxation	522
3.2	Problems	535
3.3	Solutions	575
	Bibliography	731
4	Degree Theory and Fixed Point Theory	733
4.1	Introduction	733
4.1.1	Degree Theory	733
4.1.2	Metric Fixed Point Theory	755
4.1.3	Topological Fixed Point Theory	760
4.1.4	Order Fixed Point Theory	769
4.2	Problems	778
4.3	Solutions	817
	Bibliography	955
5	Variational and Topological Methods	957
5.1	Introduction	957
5.1.1	Minimization Methods	957
5.1.2	Minimax Methods for Critical Points	970
5.1.3	Morse Theory: Critical Groups	989
5.1.4	Dirichlet Elliptic Problems	996
5.2	Problems	1005
5.3	Solutions	1055
	Bibliography	1229
	List of Symbols	1231
	Index	1243

Exercises in Analysis

Part 2: Nonlinear Analysis

Gasiński, L.; Papageorgiou, N.S.

2016, VIII, 1062 p., Hardcover

ISBN: 978-3-319-27815-5
